SEPARATE INDEX ASSEMBLIES

Index assemblies for series PA-1000 and PA-2000 interchangeable.

CRL No. PA-300 Assembly—Contains PA-300 (30°) index, P-120 pointer knob, adjustable stop plate, two ⅛" spacers, two 3/16" spacers, four 3/16" spacers, 2½" tie bolts, nuts, lockwashers and fiber spacer washers. Rear shaft length 2". Use with 1 to 3 sections.

CRL No. PA-301 Assembly—Contains PA-301 index (30°), P-120 pointer knob, adjustable stop plate, two ⅛" spacers, two 5/32" spacers, ten 3/16" spacers, four 1¾" spacers, 5" tie bolts and hardware. Rear shaft length 4". Use with 4 to 6 sections.

CRL No. PA-302 Assembly—Contains PA-302 (30°) index, P-120 pointer knob, adjustable stop plate, four 3/16" spacers, two 5/32" spacers, sixteen 3/16" spacers, eight 1¾" spacers, 7" tie bolts, and hardware. Rear shaft length 6". Use with 7 to 9 sections.

CRL No. PA-304 Assembly—Contains PA-304 (60°) index and hardware same as PA-300. Rear shaft length 2". Use with 1 to 3.

CRL No. PA-305 Assembly—Contains PA-305 (60°) index and hardware same as PA-301. Rear shaft length 4". 4 to 6 sections.

MIL-S-3786 STYLE SRO3 MINIATURE CERAMIC SWITCHES

Designed to meet MIL-S-3786. Insulated with steatite (grade L-422 or better per MIL-I-10A). Dow Corning 200 silicone treated against surface moisture. Breakdown, 1000 v. AC rms between critical parts. Coin silver clips and contacts; treated for solderability. Adjustable stops or continuous rotation on 30° index. Ceramic sections 1 9/32" dia. x .125" th. Single hole mounting with locating lug at 17/32" radius. Bushing, 3/8"-32NEF-2A threaded, 3/8" lg. from mtg. surface. Shaft 1/4" dia. full round, 2 1/4" lg. from mtg. surface. With nut, lockwasher and P-120 pointer knob. Ratings: 450 ma at 115 v. AC; 8 amps, 6 v. DC; 5.5 amps, 12 v. DC (make-break resistive load).

SERIES PS 15/16" SUBMINIATURE ROTARY SWITCHES

Deluxe, ceramic insulated rotary switches that are ultra-small. Weigh less than 1 oz. each, yet have the same electrical ratings as switches much heavier and larger. Ideally suited for band switching, transistor circuits, aircraft instruments, etc. Insulation is Dow-Corning 200 Silicone treated steatite (grade L-422 or better per MIL-I-10A); Size: Ceramic sections 1/8" thick spaced 1/8" apart with ceramic spacers; spacing between front plate and first section, 5/32". All hardware except clips, contacts, and index spring are steel*. Mounting: Single hole with optional locating lug on 3/8" radius. Bushing 1/4"-32 thread, 1/4" long. Shaft 1/8" dia. x 1 1/4" long. Rated: Make and break, resistance load .550 amp at 28 volts DC, 170 milliamps at 115 v. AC. Index: Positive 30°; fixed stop.

▸Indicates direction against which "lever lock" switch is locked. (Other locking combinations on request.)
②Part numbers listed in Navy MIL Std. 242E (Navy).
③These switches are listed in NAV. SHIPS HANDBOOK of miniature parts for Electronic Equipment — Nav. Ships 0967-031-1000.
④These switches are built to MIL-S-8834 requirements but are not approved to MIL-S-8834 and MS90310. Submitted for approval November, 1965. Check latest QPL-8834 or Cutler-Hammer for latest status.
⑤Small lever switch with keyway is built to MIL-S-8834 requirements, except "without lever seal".

Note—The values shown for multi-pole switches are amperes per pole except for motor load. See ● below.
Note—Current ratings are established at 77° F.
Note—All current ratings good to 50,000 ft. altitude. For higher altitude check local C-H office.
Note—AC current values good for frequencies from 50 to 400 cycles (except "▲" in Col. 25 is 20 amp. at 50-60 cycles).
*Momentary contact.
◐These figures are maximum current ratings for 10,000 operations. Longer life (more operations) can be expected when operated at less than rating of switch.
●Motor load values for multi-pole switches are held on all poles of switches being connected in motor circuit and motor stalled current not exceeding 300% of normal running current.

Experience has shown that for voltages not in excess of 250, the current rating of aircraft switches is inversely proportional to the voltage. If the voltage is doubled, the rating is halved.
Therefore, if the 125 volt a-c rating of a switch is known, it follows that on 200 volt ac, the current rating is 125/200 of 62.5% of its 125 volt ac rating.
This rule also applies to two or four pole switches used on polyphase systems. Cutler-Hammer aircraft switches carry per pole ratings and if the current and voltage handled by each pole is known, different rating combinations can be worked out.
A double pole switch, has at least twice the rupturing capacity of one of its poles because there are twice the number of breaks in the circuit. Its life is only slightly more than that of one pole because breaks are not simultaneous. The first pole or break handles twice its normal rating resulting in rapid erosion of contact material.

The switches listed on these pages represent only a small fraction of the total number of small motor and appliance switches manufactured by C-H. Contact your local Sales Office or Distributor for more complete listings.

MAGNETIC PROXIMITY SWITCH

For Counting Position Limiting Sequence Control Mounts in Any Position

Precision, fast acting, suitable to sequential control functions on machine tools, packaging, material handling and similar industrial devices.

Strong, encapsulated, assures freedom from contamination by cutting oils, dust, powder, chips, etc. Operates up to hundreds of millions of cycles — temperature range −30°C to +105°C. Speed (Max) 200 cycles/sec repeatability within .005".

Switch actuates when brought into proximity with ferrous metals or other magnetic materials. No mechanical linkage necessary for operation. Operating sensitivity in nom. ⅛" make, ½" break. Switch elements sealed in glass, unit is potted in epoxy resin. Case is impervious to oil, water, gas, all common solvents.

Typical actuators include indexing tables, cams, wheels, push rods, die sets, line objects such as food and beverage cans, components, parts, vehicles, rotating and swinging objects, etc.

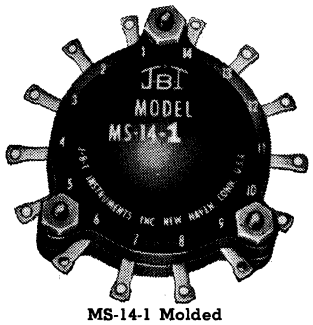
ROTARY SWITCHES — LAMINATED AND MOLDED

J-B-T INSTRUMENTS, INC.

J-B-T® 28th Year

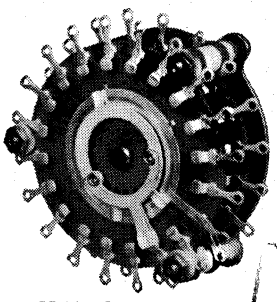


MS-14-1 Molded

- **INSTRUMENT AND TESTER TYPE**
- **14- AND 20-POSITION**
- **SINGLE AND MULTI-DECK**
- **MILITARY OR COMMERCIAL**

USES — J-B-T Rotary Selector Switches are extensively used in quality test equipment, portable instruments, inspection setups, and other military aerospace and commercial applications where trouble-free, dependable performance is of major importance.

FEATURES — **Extra Contacts** — 14- and 20-position designs provide extra switching capability. **Dependability** — Sturdy rotors and decks with rigid 3-post deck suspension; current-carrying parts heavily silverplated to meet 100 hour salt spray test; sharp detent mechanism to assure positive indexing; insulation resistance above 50,000 megohms. **Low Contact Loss** — Double-grip collector arms, and large area contacts, silver to silver; average contact resistance, .007 ohms or less. **Ample Dielectric** — Conservatively rated at 1 amp., 125 VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp. AC or DC; maximum voltage between contacts, 1500 VAC, R.M.S.; between decks and ground, 2000 VAC, R.M.S



SS-20-2 Laminated

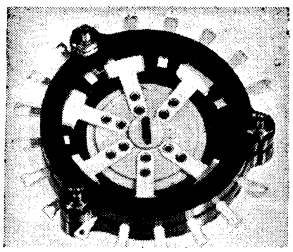
Enclosed — Molded models have all moving contacts enclosed to minimize dirt and corrosion.

Basic 14-Position: 13 circuits and "off" per deck in 2" circle (SS-14), or 2-3/32" circle (MS-14) with 25° 43' angular indexing. Supplied individually boxed with **1-1/4" Bar Knob, (KN-14),** not on bulk orders unless specified. For details, SS-14, 1 to 6 decks, see Print SK-42 Rev. B. MS-14, 1 to 6 decks, Print SK-111 Rev. D, 7 decks and over, Print SK-112 Rev. C.

Basic 20-Position: 19 circuits and "off" per deck in 2-23/32" circle (SS-20) or 2-5/8" circle (MS-20) with 18° angular indexing. Supplied individually boxed with 2" **Bar Knob (KN-16),** not on bulk orders unless specified. For details, SS-20, 1 to 6 decks, see Print SK-116 Rev. A. MS-20, 1 to 6 decks, Print SK-113 Rev. D, 7 decks and over, Print SK-114 Rev. C.

Military or Commercial Variations: Special switches too numerous to list now are being made. Typical are: laminated models with 14 or 20 live positions, no off, designated by suffix F as in SS-14-2F or SS-20-1F. Inquiries are invited.

***** BONDED RUGGEDIZED TYPES** As indicated in the table, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types using cured laminations for ruggedization, shockproofing and further enclosure. This additional dependability factor adds only approx. 1/64" and 35c catalog price per deck.



MS-20-1-6DT
Double-throw Switching of 6 circuits per deck

6-POLE DOUBLE-THROW PER DECK —

1 or 2 DECKS (DT Series). Widely used for simultaneous double-throw switching of 6 circuits per deck (18° throw). Fully enclosed — illustration shows protective cover cut-away. Circuit arrangement printed on switch front. If DTS Shorting Type, 1500 VAC R.M.S. between contacts and ground, 1000 VAC R.M.S. between contacts. See **MS-20-1-6DT, MS-20-1-6DTS,** and **MS-20-2-6DT** in table.

NOTES TO TABLES

* Standard Items, but not regularly stocked; check with your electronic parts distributor.

(a) 5 positions include 4 "live" and 1 "off."

(b) 6 positions include 5 "live" and 1 "off."

(c) Complete shorting—all contacts shorted except one in use.

(d) Dimensions given are for continuous rotation switches. On Standard SS-14 Models only, adjustable stops are also furnished, and when used, increase depth behind panel 3/32" and decrease effective bushing length 3/32".

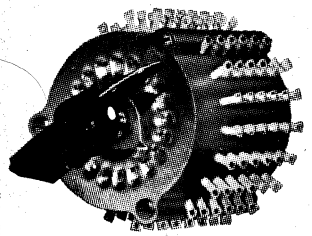
MULTI-POLE AND LEVER TYPE SWITCHES

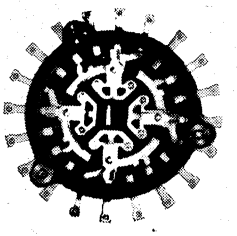
J-B-T INSTRUMENTS, INC.

NEW MULTI-POLE MOLDED ROTARY SWITCHES, SERIES 20M.

• Superior Molded Material • All Models Bonded & Ruggedized • Panel Seal Available



Front View Showing Panel Locator which is Normally at 3 o'clock Position.



Rear View with Back Cover Cut Away to Show 4-Pole Construction with 4 Live Switching Contacts.

Although the new 20M- Series is ¼" longer behind the panel than the 20-position molded switches described on the preceding page, the two styles are otherwise interchangeable in dimensions. Providing 19 live positions and off, the 20M- offers these additional features:

1. **Increased Versatility of Circuitry** — up to and including four poles per deck;
2. **Upgraded Insulation Resistance and Dielectric Qualities** — by use of melamine stators and rotors (or other MIL-M-14 molded materials when specially ordered);
3. **Built-in Panel Locator or Non-Turn Device;**
4. **Extended Switch Life** — new contact design with rotor brushes of phosphor bronze heavily silver-plated;
5. **Bonded and Ruggedized Construction;**
6. **Radial Alignment of Multi-Pole Contact Surfaces** — by means of newly-designed double-ball detent with diaphragm-type springs.

VARIATIONS OF 20M- Please request SK-142 for full dimensions and circuit diagrams. Besides the condensed listing in the accompanying table, various combinations of **shorting and non-shorting contacts for each deck** may be made. **Fixed stops** are built-in but may be provided for single-pole switches when specially ordered. **Over six decks** can be supplied for a reasonable number of poles; extra decks add 5/16" per deck and 5/16" per switch for rear support SU-3. **Ring-contact** (suffix R) may be specially ordered.

PANEL SEAL PS20M- SERIES Sealed shaft and bushing meet the requirements of MIL-S-3786A for sealing. For details ask for SK-143. The seal (prefix PS) adds $1.75 per switch to catalog price.

* See MS-20 drawing on preceding page for location of positions.

Notes: (1) NON-shorting (N) type — (break-before-make) — is shown. For shorting type (S), add $.05 per pole per deck to catalog price. Example: 3 pole, 3 deck 20M-3053S is $8.95.

(2) Switch with all live positions per pole or less than maximum live positions can be provided by fixed stops.

(3) Off position is in extreme ccw position from knob end.

(4) **Panel Seal** is available including shaft seal within bushing. Use suffix PS. Example: PS20M-1203N. See Print SK-143.

LEVER ACTION SWITCHES — 6, 5, 4, 3, and 2-Position — LAMINATED, MOLDED, & SUB-MINIATURE

LAMINATED 3- AND 4-POSITION, POSITIVE INDEXING. Derived from J-B-T SS-14 instrument-type rotaries, these switches are specified for inspection equipment, communications systems, control consoles, and similar uses. 4-position are interchangeable with 3-position except in length of throw — mounting holes for both, 1⅝" between centers. Individually-boxed switches come with KN-17 knob; bulk shipments, without knobs. **SINGLE DECK** — spacing between centers: recommended, ¾"; minimum, 9/16". **TWO DECK** — spacing: recommended, 15/16"; minimum, 13/16". ⅜" between decks matches TV twinlead wires. **SPRING RETURN TYPE** — single deck, 3-position only; lever returns to position 11, giving momentary action at positions 9 and 10. For dimensions, ask for drawing SK-138.

MOLDED 5- and 6-POSITION, POSITIVE-INDEXING. 5 or 6 live positions, two circuits per deck, in enclosed lustrous black molded construction; adapted from the MS-20 series with electrical characteristics as shown on previous page. These models can simplify circuitry for sound systems, control, inspection, test, experimental, and hobby purposes. Individually-boxed switches come with KN-20 threaded black molded knob; bulk shipments, without knobs. For mounting data see SK-64, Rev. H on 5-position and SK-119, Rev. B on 6-position.

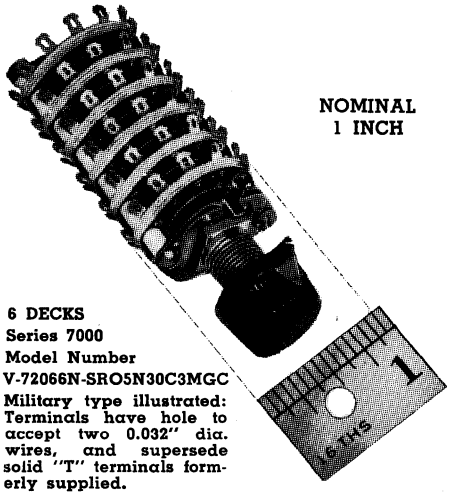
SUB-MINIATURE ROTARY AND LEVER SWITCHES

J-B-T INSTRUMENTS, INC.

J-B-T 28th Year

SUB-MINIATURE SWITCHES MADE TO MANY PERFORMANCE LEVELS OF MIL-S-3786B, TYPE SRO5; ALSO NON-MILITARY X AND V VERSIONS.

SERIES 7000, FULL 12 LIVE SWITCHING CONTACTS PER DECK; SERIES 5000, UP TO 8 POLES PER DUAL-DUTY DECK.



6 DECKS
Series 7000
Model Number
V-72066N-SRO5N30C3MGC
Military type illustrated: Terminals have hole to accept two 0.032" dia. wires, and supersede solid "T" terminals formerly supplied.

- **Precision built for Low-Current Usage where Size, Weight, Reliability are Important**
- **Unusual Versatility — More Contacts per Deck**
- **Accelerated Snap-Action Detent**
- **MIL Materials Throughout for Military & Non-Military Applications**

CAUTION— MIL-S-3786B, a sophisticated specification, spells out more than one performance level in each of several categories such as Temperature-Life, Vibration, Shock, and Altitude. Each level is designated by its own symbol. J-B-T SRO5 models meet an exceptional number of levels.

• USES — For test equipment, airborne and transistorized equipment, geophysical apparatus, and other miniaturized electrical and electronic devices.

TWO BASIC SERIES — Full 12 live switching contacts per deck are available in **Series 7000** using a patented wafer design feature where rotor contacts are on the front, and switching contacts are on the rear of the same deck. 1 to 4 poles per deck 1 to 6 decks, standard.

Up to 8 poles per dual-duty deck are available in **Series 5000** which has up to 12 contacts including common on the front, and up to 12 contacts including common on the rear of the same deck. 1 to 4 poles on each side of dual-duty decks; 1 to 4 decks, standard.

THREE ROTARY TYPES — Both Basic Series are made in 3 types: **MILITARY STYLE SR05,** numbered for specific performance levels of MIL-S-3786B; **V TYPE,** of similar construction to SR05, but not ordinarily subjected to full military test procedures; and X TYPE, using the same materials as V type switches, but intended as replacements for previous models or as original components for non-military devices where requirements are similarly exacting.

LEVER SERIES (L Types) — Made as VL-7000 or VL-5000 Series, 1 to 4 decks. Illustrated on preceding page.

KNOBS — Supplied with individually boxed switches on V and X types; not supplied on SR05 because separate military specification applies.

DIFFERENCES BETWEEN SRO5 MILITARY, V, and X — Switches other than X types use extra rugged index mechanisms and rotor construction.

* Typical MIL-S-3786B complete number is V-71121N-SRO5N30C3MGC, unless specifically ordered otherwise. Temperature-Life Characteristic C also qualifies for Characteristics A and B; Vibration Grade Symbol 3 also qualifies for Symbols 1 and 2; Shock Type M, medium impact, normally supplied. Shock Type H available on some models when so ordered. Altitude C covers up to 70,000 ft., also meets Characteristic O (up to 10,000 ft.)

SPECIFICATIONS & TEST DATA ON SR05 MILITARY STYLE

NOTE: Most of the values shown here are given in the Specification and do not indicate the extent to which the test results of J-B-T switches were more favorable.
Current-carrying capacity: 5 amps at standard ambient conditions.
Current-breaking capacity: 750 MA at 30 VDC; 300 MA at 120 VDC; 1 AMP at 115 VAC Non-Inductive.
Initial Contact Resistance: .005 ohms max.
Contact Resistance: To MIL-STD-202C, Method 307, which requires Initial — 10 milliohms; After Moisture Resistance Test — 15 milliohms; After Life Test — 20 milliohms.
Materials: Terminals (double-wiping): gold-plated 90% silver alloy. **Rotor Contact:** J-B-T #1800 Silver Alloy. **Shaft & Frame:** Stainless steel, passivated.
Insulation: Wafer, glass epoxy laminate to MIL-P-18177C Type GEB, NEMA G-11; Rotor, ceramic to MIL-I-10A, Grade L-623.
Life Rotational; Temperature-Life Characteristic C, 25,000 rotational cycles at 10 cpm, Temperature —65°C to +125°C; 25,000 cycles at 70,000', room ambient temperature.
Vibration: Grade 3 of Table III MIL-S-3786B, 10 to 2000 cps. Tested in accordance with MIL-STD-202C, Method 204, Test Condition B.
SHOCK: Shock Type M, Medium Impact per Table IV, MIL-S-3786B. Tested in accordance with MIL-STD-202C, Method 205. Mating contacts did not open for more than 10 microseconds. Shock Type H, High Impact, Method 207, specifies not more than 5 milliseconds and does not automatically cover Type M Impact.

TOGGLE SWITCHES — HEAVY DUTY

J-B-T INSTRUMENTS, INC.

SINGLE-, DOUBLE-, AND 4-POLE — MIL, AN, AND JAN TYPES

Series MS25068, MS35058, and MS35059 to MIL-S-3950B Series ST40A-H, ST42A-H ST50K-T, ST52K-T to JAN-S-23, MIL-S-21195A (Ships), or DDAX Drawings

WHY IT PAYS TO SPECIFY J-B-T

J-B-T concentrates on trouble-free switches. Among its six families of toggle switches J-B-T produces more than 170 models made to Government Specifications. Market studies indicate that while these switches are a must in military applications, almost half are produced for non-military use where the principal requirement is dependability. J-B-T apparently is specified because:

1. **Materials are good.** For instance, J-B-T is the only manufacturer of MIL and AN heavy-duty models regularly using solid **coin silver contacts** and rocker arms — to add overload protection and keep contact resistance under .005 ohms.
2. **The design is good.** All MS models have silicone rubber bushing seal for sand, dust and 15-foot head of water submersion tests. Medium-duty types MS25098 and MS25100 also feature case-to-terminal sealing and a new design which provides fast break and wider gap to surpass the 125 VDC endurance tests of MIL-S-3950B.
3. **The value is good.** The many features required to meet Government standards, and J-B-T's rigid in-plant testing pay off in long, useful life. Nevertheless, because J-B-T makes **only** quality switches, quantity production permits a surprisingly small price differential over run-of-the-mill types.
4. **Deliveries are relatively good.** See your distributor. Production is scheduled to back up his stocks with factory inventory of finished switches and work in process to meet predictable demand.

MIL-S-3950B SERIES — Single-pole MS35058 with suffix —21 and above, and double-pole MS35059 types with suffix —21 and above are recommended when maximum reliability is required. Temperature, endurance, and altitude requirements exceed earlier MS types (suffix —1 to —19), AN3021 and AN3027 switches to MIL-S-6745, and ST styles to JAN-S-23 and MIL-S-21195A(Ships). All MS switches contain a silicone rubber bushing seal to meet sand and dust and 15-foot head of water submersion tests.

NOMINAL RATINGS: 20 Amp. at 125 VAC, 10 Amp. at 250 VAC.

SIZE: Single-hole; bushing 15/32" 32NS-2A by 15/32" high; toggle lever, 11/16" long. Bodies including terminals: **SP:** 1-1/8" x 5/8" x 1-1/16" deep; **DP:** 1-21/64" x 3/4" x 1-1/32" or 1-13/64" deep.

TERMINALS: MIL-S-3950B switches have solderable 6-32 screw terminals; ST40's and ST50's, screw terminals; ST42's and ST52's, solder lugs.

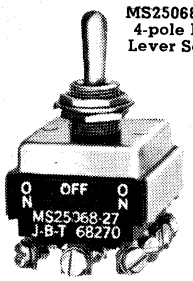
OUTSTANDING 4-POLE SWITCHES TO MS25068 REQUIREMENTS



MS25068-27
4-pole DT
Lever Seal

●There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS25068.

Equally important, the internal construction uses rocker arms and contacts made of solid coin silver (not clad or brazed). The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty J-B-T MS switches. Dimensions same as MS35059 above except bodies including terminals: 1-11/32" long, 1-9/16" wide, 1-9/32" deep.

Other MS25068 Numbers: Models with suffix -1 through -13 as set forth in MIL-S-3950 are superseded by MIL-S-3950 Revision B Types. The latter are interchangeable electrically and mechanically but meet additional performance standards above the former types. TOGGLE SWITCHES — MEDIUM DUTY & CROSS-REFERENCE

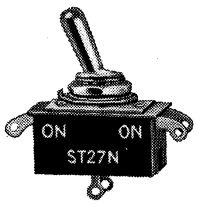
J-B-T INSTRUMENTS, INC.

28th Year

SINGLE & DOUBLE POLE — GOVERNMENT QUALITY

Series MS25098 and MS25100 to MIL-S-3950B; Series ST12-27 to JAN-S-23, MIL-S-21195A(Ships), or DDAX Drawings.

MS25100-23 DPDT Rear Connected Lever Seal



ST27N, DPDT Side and Rear Connected ¼" Bushing

● **MEDIUM DUTY** describes the current-carrying capacity—nominally 6 amp. at 125 VAC, 3 amp, at 250 VAC —rather than the life characteristics. Self-wiping heavily silver-plated double-grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

NEW DESIGN FOR MS25098 & MS25100—Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950B. For example, after 20,000 cycles of operation at 65,000' altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

SIZE AND TERMINALS — Whether MS series to latest MIL-S-3950B, or ST series to Specification JAN-S-23 and MIL-S-21195A(Ships), all have solder terminals. Medium-duty types use 11/16" long, toggle lever, bushing 15/32"-32NS-2A by 15/32" (or 1/4"). Bodies including terminals are: 1-1/4" long, 11/16" wide, 29/32" deep, except ST16, —17, —26, —27 are 1-3/4" long and 21/32" deep.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950B have internal toggle seal to meet 15 ft. water submersion test. MIL-S-3950 models are superseded by MIL-S-3950B models.
NOTE B: For heavy-duty switches in the MS25068, MS35058, and MS35059 Series, MIL-S-3950B calls for SCREW TERMINALS ONLY. These terminals have SOLDERABLE FINISH and may be soldered after removal of screw.

UL IDENTIFICATION AND RATINGS: HEAVY DUTY AND MEDIUM DUTY

Underwriters' Laboratories, Inc. lists under "Switches, Special Use" (File E26557) models marked with the J-B-T part number shown below. In some instances, there are minor construction differences from ST switches, but the ratings and external dimensions are the same. UL-marked types are not regularly stocked but only are manufactured in substantial production runs.

TOGGLE SWITCHES—MEDIUM DUTY AND MINIATURE

J-B-T INSTRUMENTS, INC.

New SINGLE & DOUBLE POLE — MINIATURE

MANUFACTURED IN CONNECTICUT by J-B-T, the miniature types illustrated make up the firm's 6th and newest family of toggle switches. Series JMT combines drastic reduction in size and weight with the trouble-free construction which characterizes standard size J-B-T switches. Primarily designed for manually controlled, low-current, solid-state devices and miniaturized circuitry for computers, instruments, space, geophysical, and test apparatus, these tiny switches also have application in aircraft, communications, and electronic equipment, and portable products.

Made with a distinctive **green** body single-pole types are ¼" thin, double-pole types less than ½" square. Both use single-hole mounting with ¼" threaded ...ng which will not turn or work loose in the J-B-T surface plate. Stringent in- ... controls assure terminals that are firmly staked and will withstand repeated ...ring.

Applications: selective-calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding.

For further data, ask for Bulletins 162-R and D664A. Inquiries also are invited on newly-developed miniature combination relay-oscillator type MRO-B12, 1.10" x .79" x .56" high.

J-B-T frequency-sensitive electro-mechanical relays (decoders) are highly stable control devices. They intermittently make and break contacts when a signal of the same frequency as the tuned reed is received. Although the reed has a high Q, the bandwidth at which the relay responds will be proportional to the input signal level.
RR-A11- and RR-A10 types are round, 4-pin plug-in relays, used primarily on existing mobile equipment.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sealed construction. These units control the frequency of oscillation in vacuum tube or transistor oscillator circuits. The RO-B type oscillator control is recommended where accurate and stable AC signals are required.

RR-D types are internally shock-mounted resonant reed relays, which are square, sealed units with 7-pin miniature plug. They now are the most widely used J-B-T relays.

RO-D types are single-reed, internally shock mounted oscillator controls for applications where space saving is of importance. Dimensionally they are identical to RR-D relays.

SELECTOR SWITCH UNIQUE 1-PIECE MOLDED WAFER PROVIDES HIGH RELIABILITY

The new IRC-CTS design goes right to the heart of selector switch reliability . . . the wafer. Automated manufacture provides unprecedented uniformity. One-piece *molded* construction of the wafer virtually eliminates drift. In each production run, all switches are identical, terminal placement is exact and permanent. Machine exactness replaces human error and variation, eliminating wide tolerances and assuring high reliability.

- Compact 1 1/16" size design allows more circuitry per unit of depth behind panel.
- Rivet-free construction permits closer stacking.
- Superior insulation due to repetitive exactness in terminal spacing, and molded glass alkyd material.
- 1000% more silver than used by most commercial switches—evenly applied at point of contact.
- Rotor contacts are double-wiping and self-cleaning.
- Stator contacts are integral with terminals.
- Molded stator will not break or crush during ordinary handling, or if it is dropped.

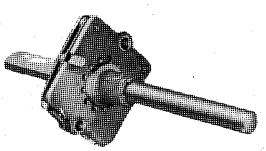
EXCLUSIVE MILITARY GRADE CTS-IRC STARWHEEL SHAFT AND 30° DETENT ASSEMBLY



T-180 T-181 T-182

A balanced lever arm and star wheel detent assembly free from end and side thrust is available for precision military and instrumentation applications. Star wheel detent provides extremely long life and minimum turning torque variation. Double lever arm construction controls torque in both directions of rotation with practically no change in torque during 100,000 cycles of operation through 12 switch positions.

ELECTRICAL RATING

Voltage and Current Ratings:

1 amp at 28 volts DC
1½ amps at 115 volts AC

High Pot Test:

Between adjacent 30° terminals or terminals to ground: 1,750 volts AC RMS for one minute, Between adjacent 15° terminals: 750 volts AC RMS for one minute.

212 Wafer Assembly

The wafer assembly of the IRC-CTS selector switch can be separated into three basic elements, the rotor insulator, the rotor contacts and the stator. The stator consists of the stator insulator, terminal lugs, contacts, contact ring, which is made as a single unit.

Stator Insulator

The stator insulator is a circular molding which encloses the mid portion of each contact and serves as a container for the rotor. The stator insulator also serves as a natural solder and flux barrier, thus protecting the contact areas.

The Stator

The Stator is the heart of the IRC-CTS selector switch and determines the circuitry of the switch in conjunction with the location of the selected rotor contacts. The stator is actually a circuit pattern cut out of metal which forms the terminal lugs, center contact ring and the stator contact.

Rotor

The rotor of the IRC-CTS selector switch holds the rotor contacts in place and carries the contacts from one position to another, providing controlled float which prevents open circuiting during severe shock or vibration.

Contact Resistance

Circuit resistance ranges from .003 to .004 ohms on standard switches when measured from one terminal to an adjacent terminal. When measured terminals are not adjacent, up to 180° apart, the resistance will measure higher due to the extra metal in the stator circuits. It is to be noted that the circuit resistance check measures all the metal in the circuit. Thus actual resistance at the point of contact is considerably less than the measured resistance. In IRC-CTS assemblies, contact resistance is unusually stable throughout the switch life.

Contact Life:

Standard sterling silver laminated rotor contacts and brass silver plated stator provide reliable life for a minimum of 50,000 cycles through 12 positions and return without appreciable increase in contact resistance. (See detent life.)

Detent Rotational Life:

The standard 212 detent assembly (T79, T80, T81 & T82) has a rated life of 25,000 cycles through 12 positions and return.

The star wheel detent mechanism (T180, T181, & T182) has a rated life of 100,000 cycles through 12 positions and return.

LONGER LIFE CONTACTS

• After 1,100,000 index operations, life tests reveal virtually no change in rotor contact resistance. • 1,000% **more** silver than used by most commercial switches has been **evenly** applied at actual point of contact by exclusive process. (See Sketch.) • Rotor contacts are double-wiping and self-cleaning. • Stator contacts are integral with terminals.

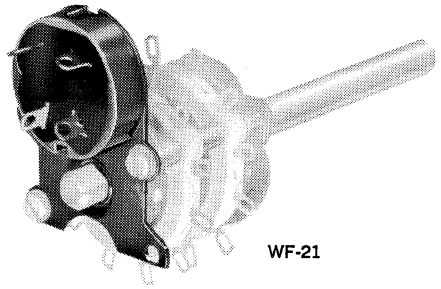
IRC-CTS ATTACHABLE POWER SWITCHES



WF-21

A selection of reliable AC power switches is available for use with selector switches, giving an original source for both the selector switch and attached switches. These power switches can be mounted on the rear frame of the selector switch or between wafers by means of a specially designed bracket.

STOCK NO.	DESCRIPTION	VOLTAGE	CURRENT

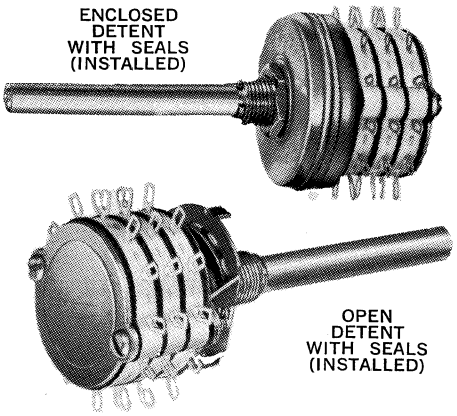
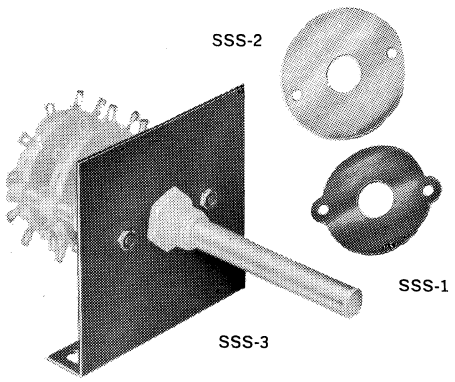
SEALED SWITCH KITS



STOCK NO.	DESCRIPTION
SSK-1	Enclosed detent construction seals both the wafer sections and the detent mechanism of the switch against dust, dirt, and moisture.
DSWK-1	Open detent construction protects and seals the wafer sections of the selector switch against dust and dirt.

SHIELDS AND MOUNTING BRACKETS



Shielding of switch sections from each other may be accomplished with these Switch Shields.

For computer, micro-electronic and areospace circuits of 125 V or less where short-circuit currents as high as 300 amps occur. High accuracy in blowing time at 300% of rating and higher is ideal for sequential switching or in circuits requiring redundancy. Blow time 4 hours min. at 100% of rating; 5 secs. max. at 200%. Amperage printed on body; can be color-coded at additional cost. Ceramic body only 7/32″ lg. x 5/64″ dia.; tin-coated copper leads .025″ dia. Order **275** (prefix) for axial leads 1 9/16″ long for diode clip or in-circuit mounting; **276** for radial leads 1 3/8″ long for use in printed circuits or receptacles. *Avg., cold.

HIGH RELIABILITY MICROFUSES

For zero defect programs. Hermetically sealed; gold-plated terminals for soldered or plug-in connections. Fuse rating identified on each fuse. Test data and traceability records are supplied and maintained. Proven performance in the Gemini "critical parts" manned space program. Voltage rating 125 V, blow time same as 273 series; time/current characteristics certified to 1% AQL per MIL-Std-105, Inspection Level II. Short circuit interrupting capacity at 125 V, 10,000 amps DC. **Size:** Fuse cap and body, .290″ lg., leads for 262 "plug-in" series .170″. Pigtail on 268 series 1.0″. Use prefix **268** for pigtail type (e.g., **268.002**).

HIGH RELIABILITY PICOFUSES

For soldering into circuits or insertion into diode type clips and mtgs. Fuses rated at 125 V or less and will interrupt short circuit currents to 300 amps at 125 VDC. Non-hygroscopic ceramic bodies. Withstands 5-lb. axial pull test. Blow time 4 hours min., 100% rating; 5 secs. max., 200% rating. Insulation resistance is 1 meg min. measured with 100 V supply. **Size:** Body 7/32″ lg., .078″ dia. Leads are .025″ dia., 1 9/16″ lg., gold-plated copper.

HIGH VOLTAGE FUSES

Designed for use in aircraft radio equipment, transmitting equipment, X-ray apparatus, high voltage rectifiers, etc., for circuits up to 20 KW DC or 30 KVA AC. Fuses are fiber enclosed with cadmium plated end caps. Two principles of arc suppression are employed: (1) Multi-break fuse wire which blows at each half inch of its length; (2) Ceramic baffles break the arc into several parts and quench it. **Blow Time:** 110%, 4-hour min.; 135%, 0-1 hour; 200% 0-2 minutes.

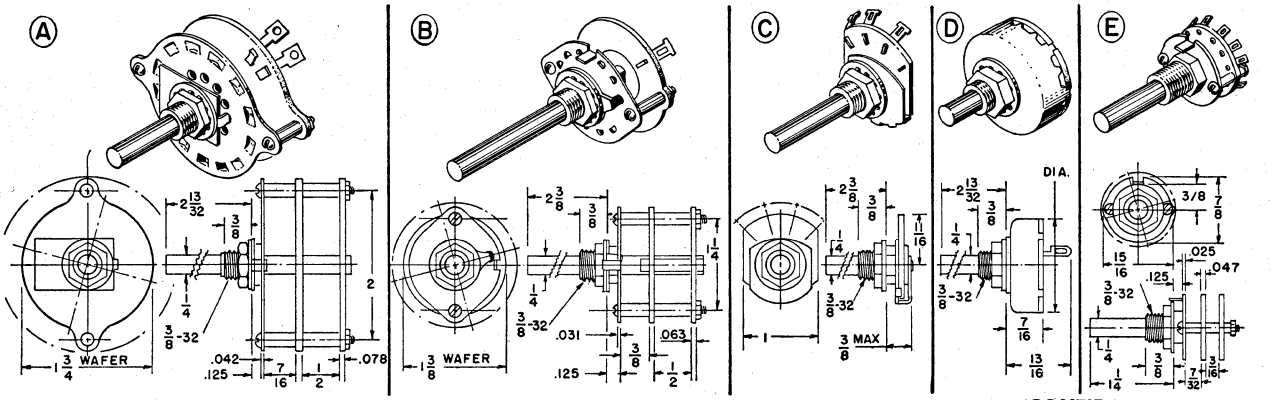
MALLORY Switches



Mallory switches are available in three general styles: Rotary, lever-action and pushbutton. Most styles are supplied in both shorting and non-shorting contacts. Shorting switches have contacts with "make" before "breaking" and are widely used in audio circuits. Contacts in non-shorting switches "break" before "making". These switches may be chosen with phenolic, ceramic or glass-epoxy wafer materials. Ceramic is usually selected for high voltage circuits as in switching RF equipment. All switches are supplied with normal mounting hardware. Dial plates are not included (except for Type 13124L).

PHENOLIC WAFER ROTARY SWITCHES

Mallory phenolic wafer rotary switches come in several sizes and contact arrangements. Supplied with nut, washer and 366-1 black knob. Phenolic is MIL grade Richardson T725.

STANDARD 1¾" DIAMETER (FIG. A)

Rated 1 amp at 300 VDC; 4 amps, 50 VDC; 2 amps, 300 VAC rms; 12 amps, 6 VAC rms. Maximum non-breaking resistive load, 12 amps. Breakdown, 1000 VAC/DC. Contact resistance less than 0.01 ohm. Supplied with adjustment pin and stop plate.

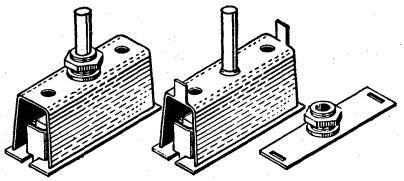
CIRCUIT BREAKERS



CBB Type CBT Type CBB Adapter

Exact replacement circuit breakers for television and industrial applications. These circuit breakers are manufactured by Mel-Rain Corp. for Mallory to the same specifications as original equipment. "Anti-cheat" reset action is non-cycling. Button must be pressed to reset. Tripping mechanism is temperature compensating for constant protection. Normal tripping time is ten seconds or less. All values above 3.1 amps have special heavy-duty contacts to withstand heavy surge currents. CBT types have twist tab mounting lugs. CBB bushing is supplied with CBB types to adapt to bushing mount.

Ask for free television circuit breaker cross-reference. Lists all popular TV sets.

Heavy-duty industrial sequence timers for industrial process control, laboratory testing, prototype timers, etc. Available in three basic frames with 5, 10, or 15 adjustable cams. Cams may be adjusted without tools to provide precise time sequence. SPDT switches are rated 15 amps at 125 VAC, equipped with quick-disconnect terminals, and snap into precision holes in basic frames. Easily replaced, but normally rated at one million cycles at rated load. Drive motors are 117 VAC synchronous and attach to frames with two screws. Interchangeable in seconds to provide time cycles from 1 minute to 24 hours. Assemblies ready to operate as received; with all instructions, timing knob and dial, terminals, timing chart and hardware.

NEW MODEL 711 MINIATURE SWITCH

Single pole, non-shorting selector switch with stationary and movable solid silver alloy contacts. Slow-break, quick-make action achieved with cam and cam follower. Breaks 7 amps at 125 VAC (or 20 VDC); carries 15 amps at 125 VAC/DC. Molded melamine phenolic body 1¼" dia. x 13/16" depth behind panel; ¼" flatted shaft. Mounts by 3/8-32 bushing and hex nut. Model number suffix indicates taps (711-3, 3 taps).

CERAMIC HIGH-CURRENT ROTARY SWITCHES

Non-shorting, single pole, rotary, multi-position unit with 2 or 3 in tandem available. **Bodies:** High grade, arc proof ceramic bodies. **Contacts:** Large, solid, silver alloy contacts. **Action:** Positive cam and roller mechanism provides slow-break quick make action. **Shaft:** Insulated by strong ceramic hubs. **Enclosed Mechanism:** Contacts and mechanism are entirely enclosed and protected except Model 111. **Applications:** Switchboards, arc welders, spot welders, battery chargers, motor controls, tapped transformers, X-ray equipment, diathermy equipment, radio transmitters, electrical machine tools, etc. **U/L Approved** except Model 608. Many variations from the basic switch design to meet your special switch requirements are available on request.

ALL CERAMIC OPEN TYPE TAP SWITCHES

Rated 7 amps max., 3 amps interrupted, at 120 VAC. Less for all DC circuits above 20 V for inductive circuits and high voltages. Body 3¼" dia. (up to 8 taps, 9–12 taps are 4¼" dia.) including lugs. Shaft, ¼" dia. **Knob:** No. 5150 knob recommended. **Shorting Type:** Moving contact bridges closely spaced taps completing a new circuit before breaking the previous one. Switch arm is not indexed and can be left in any position. **Non-Shorting Type:** Positively indexed, moving contact completely disconnects from one tap before contacting succeeding tap.

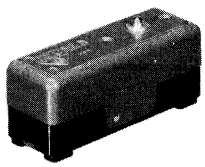
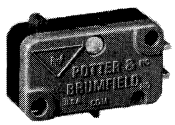
NEW! A FULL LINE OF PRECISION SWITCHES BY POTTER & BRUMFIELD

IN STOCK AT LEADING ELECTRICAL AND ELECTRONIC DISTRIBUTORS

P&B'S EXPERIENCE ASSURES RELIABILITY AND PRECISION

For more than a third of a century, we have been designing and manufacturing reliable relays. This engineering and production knowhow is now being devoted to our new line of precision snap switches. These are quality switches designed to meet or exceed industry standards for electrical ratings and life characteristics. Operating forces, actuating characteristics and mounting dimensions make these switches directly interchangeable with many competitive types. P&B precision snap action switches meet Underwriters' Laboratories and Canadian Standards Association requirements.



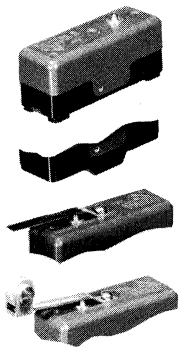


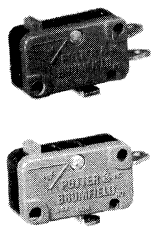
WIDE VARIETY OF STOCK SWITCHES FOR NEW APPLICATIONS AND DIRECT REPLACEMENTS

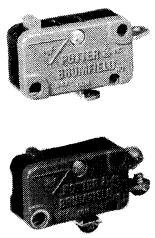
The snap switches in this catalog cover a variety of the most commonly used types and include three categories: Precision general purpose, precision miniature, and precision subminiature. All three basic types are available with various auxiliary actuators, terminals, and contact arrangements. They can be used for both AC and DC voltages.

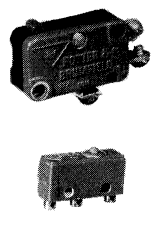
Mounting holes, terminals, operating and release forces, pretravel, overtravel, differential travel and pertinent dimensions meet established industry standards.

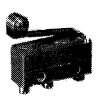
BASIC SNAP ACTION SWITCHES











PRECISION GENERAL PURPOSE

Compact, reliable, with precise mechanical and conservatively rated electrical characteristics, P&B general purpose snap action switches are for use in applications where loads may be heavy and space is not the primary consideration. They are available with a broad variety of actuators, such as pin plungers, overtravel plungers, rigid lever, roller lever, panel mount plunger, and others, as illustrated and listed on the following pages.

PRECISION MINIATURE

Sturdily constructed but light in weight and small in size, P&B precision miniature snap action switches are highly sensitive and especially suited for compact installations where precision is a primary factor. Their small size and high electrical capacity recommends them for applications of multiple installations in limited space. Basic types are available in various contact and terminal arrangements shown on the following pages.

PRECISION SUBMINIATURE

Designed for applications requiring exceptionally small size and low operating forces, P&B precision subminiature switches are especially suited for electronic equipment, business machines, military apparatus and other precision electrical equipment. They are used where space and weight are primary considerations. These types are available for either direct operation by pushers, cams, or lever actuators with or without rollers. Solder, turret and quick-connect terminals are available.

SPECIFICATIONS

PRECISION GENERAL PURPOSE SWITCHES—TYPES A1 G

Meet Underwriters' Laboratories and Canadian Standards Association Requirements

For Types A1 G1—Contact arrangement: SPDT. Ratings: 15 amps, 125, 250, or 480 volts AC; ½ amp 125 volts DC; ¼ amp 250 volts DC; ⅛ HP 125 volts AC; ¼ HP 250 volts AC.

For Types A1 G2—Contact arrangement: SPDT. Ratings: 20 amps, 125, 250, or 480 volts AC; 1 HP 125 volts AC; 2 HP 250 volts AC; 10 amps 125 volts when controlling tungsten filament lamp loads on AC circuits.

PRECISION MINIATURE SWITCHES TYPES A1 M

For Types A1 M1—Contact arrangements: SPDT. Ratings: 30 volts DC; inductive: 10 amps at sea level, 6 amps at 50,000 feet; resistive: 10 amps; motor load: 6 amps.

Meet Underwriters' Laboratories requirements for 15 amps, 125, or 250 volts AC; ⅓ HP 125/250 volts AC; ½ amp 125 volts DC; ¼ amp 250 volts DC.

For Types A1 M2 (low operating force)—Contact arrangements: SPDT. Rating: 30 volts DC; inductive: 5 amps at sea level, 5 amps at 50,000 feet; resistive: 5 amps; motor load: 5 amps.

Meet Underwriters' Laboratories requirements for 10 amps, 125 or 250 volts AC; ½ amp 125 volts DC; ¼ amp 250 volts DC; ⅓ HP 125 volts AC.

For Type A1 M4 (low differential)—Contact arrangement: SPDT. Ratings: 30 volts DC; inductive: 1 amp at sea level, 1 amp at 50,000 feet; resistive: 2 amps; motor load: 1 amp.

Meet Underwriters' Laboratories requirements for 10 amps, 125 or 250 volts AC.

For Type A1 M5 (gold contacts)—Contact arrangement: SPDT. Rating: 28 volts DC; inductive: ½ amp; resistive: 1 amp; inrush: 2 amps.

PRECISION SUBMINIATURE SWITCHES TYPES A1 S

For Types A1 S1—Contact arrangement: SPDT. Rating:

Meet Underwriters' Laboratories requirements for 5 amps, 125 or 250 volts AC. The 30 volt DC rating is as follows: inductive: 3 amps at sea level and 2.5 amps at 50,000 feet; resistive: 5 amps at sea level and 50,000 feet; maximum inrush: 24 amps.

For Types A1 S5 (gold contacts)—Contact arrangement: SPDT. Rating: 28 volts DC; inductive: ½ amp; resistive: 1 amp; inrush: 2 amps.

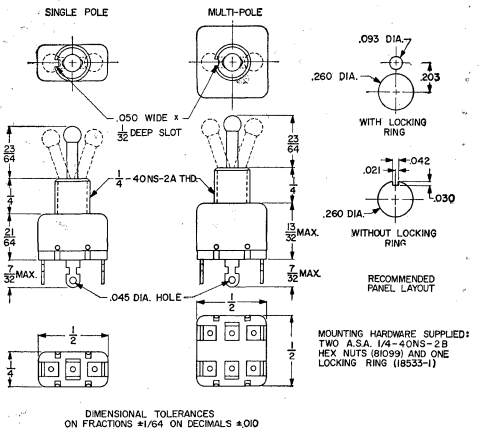
Meeting requirements of MIL-S-3950 as applicable to SCL-6305



OPERATING CHARACTERISTICS

CONTACT RATINGS: Low level to 5 amp. resistive at 29 votls DC or 115 volts AC.
INITIAL CONTACT RESISTANCE: 0.01 ohms maximum.
DIELECTRIC STRENGTH: 1000 volts RMS at sea level.
VIBRATION: 5-28 CPS at 0.5 inches double amplitude, 28-2000 CPS at 20 G.
SHOCK: 50G for 11 milliseconds.
ELECTRICAL LIFE (minimum): 20,000 make-and-break cycles.
SEAL: Low temperature rubber boot for panel is available.
WEIGHT: From 3.0 to 5.0 grams maximum.
TERMINALS: Solder lugs.

R30

ERSA CONTROL TRANSFORMER MODEL R30

The **R30,** transformer model has a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 6.5 volts, thus making it possible to select a temperature range between 240 to 480°C. When not in use, the ERSA iron rests on a special nozzle provided on the transformer. This protects against overheating. The **R30,** with a greater output, permits universal use of all the various ERSA irons with their different capacities.

MODEL R30, rated 30 VA, 5.1#. Price.....$25.00

*** 'ERSA-CLAD' — DURABLE IRON-CLAD COPPER BITS**

Made of pure electrolytic copper with an iron coating. Soldering surface of bit pre-tinned ready for use. Shaft is chromium plated to prevent baking in. **ERSA-CLAD** bits in normal use last for more than 100,000 solderings.

SOLDERING AIDS

The hallmark of quality shows in each detail. Examine the straight or angled tips for the hard-to-reach areas . . . you'll find they're twist-proof, hard-chrome plated to shed solder. More, both ends are insulated from one another. The practical fork-ends are a "must" for twisting or holding wires. And when you want to scrape joints, connections or ream out lug holes, just flip your **Beau-Tech** soldering aid to the spade end. Non-slipping, non-rolling "hex" handles. Available in standard, miniature and single ended models.

BOKER U.S.A. IN-DUS-TRONIC TOOLS QUALITY SINCE 1837 ®

DESIGN IN-DUS-TRONIC tools are more streamlined, with slender jaws and fine points, to reach into the tight spots and perform the specific work required of the electronics technician.

TEST AND INSPECTION Individually tested for hardness, each tool must maintain highest standards for handle strength and cutting ability. To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburization" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness.

Individually Boxed — Six is minimum quantity.

PLASTIC HANDLES— (TN-22, TN-33, TN-44, TN-55) (M2T, M3T, M4T, M5T) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x ⅜" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. ⅛" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH — has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

STAINLESS STEEL WIRE BRUSHES
on steel shaft approximately 2" long overall. Can be used in a regular pin vise. **.35 net**

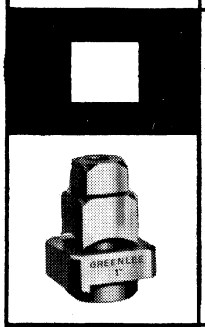
No reaming or filing . . . hole is smooth, perfect. 29 sizes from ½" to 3⅛" diameter. New Ball-Bearing Drive available for even easier, speedier operation.

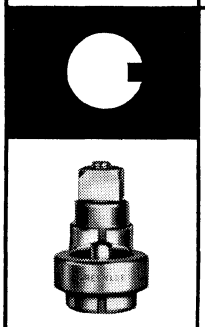


NO. 731 SQUARE PUNCH

Cuts square or oblong openings as desired. Available in five sizes for making ½", ⅝", ¾", ⅞", and 1" square holes. Drive screw fits into ½" hole, which can be drilled or made with ½" No. 730 GREENLEE Round Punch. Operates with an ordinary wrench for drive power. Individually packed.

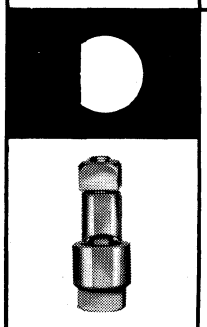
NO. 731-R KHP RELAY PUNCH

Makes clean, accurate, *finished* holes in up to 16-gauge metal for Potter & Brumfield KHP miniature relay sockets. Makes 1.015" x .859" hole.



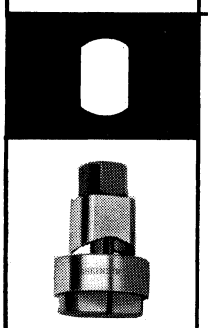
NO. 732 "KEY" PUNCH

Quickly, easily cuts holes for keyed radio sockets. Operates on same principle as other GREENLEE Radio Chassis Punches . . . an ordinary wrench supplies the drive power. In five sizes to make openings of 15/32", 15/16", 1 11/64", 1 17/64", 1 21/64". Drive screw fits into ½" hole. Individually packed.



NO. 733 "D" PUNCH

Simplifies and speeds the work of making "D"-shaped openings for high-frequency, miniature tube sockets and other equipment using this type opening. Available in ½" and ⅝" sizes. Operates on same principle as other GREENLEE Radio Chassis Punches with an ordinary wrench supplying the drive power. Drive screw fits into ⅜" drilled hole. Individually packed.



NO. 734 DOUBLE "D" PUNCH

Quickly makes standard electrical receptacle openings. Cuts standard hole 1⅛" dia. across parallel sides, 1⅜" dia. across rounded ends. Simply insert into a ½" hole and turn with an ordinary wrench. Does the work in less than five minutes . . . eliminates all tedious hand filing . . . gives a smooth, perfect opening.

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation. Order tool number by wire size being used.
*"N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

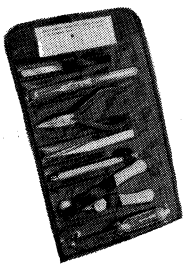
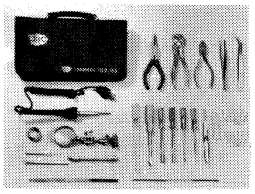
ELECTRONIC TOOL KITS

NEW COMPACT ELECTRONIC KIT



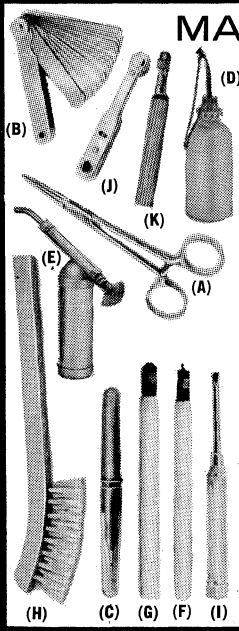
A set of most widely used precision tools for servicing all type of electronic equipment. Packaged in sturdy roll up vinyl protective case. Kit contains: chain nose plier, wire stripper, injecting oiler, fine nose tweezer, industrial burnisher, pin vise, combination screw and ¼" nut driver. **KE-7 $9.90.**

MASTER 20 PIECE SERVICE TOOL KIT



Ideal kit for service and repair of radio, TV, instruments and office equipment. Comes in protective leatherette zippered case. Kit contains: Diagonal chain nose and groove grip pliers, soldering iron with solder core, pen burnisher with 12 blades, straight and bent nose tweezers, 2 jewelers screw drivers, nut drivers ¼" and 3/16", standard and phillips screwdrivers, 2 needle files, magnifier, pin vise, aligner and chisel. **K-600 $24.75.**

MAINTENANCE AND SERVICE TOOLS



High-quality precision-designed tools for ease in maintenance and service of delicate electronic equipment.

(A) M-100S Retriever clamp, straight type, 5½" long **$4.74**
M-100C Retriever clamp, curved type, 5½" long **$4.88**
(B) T-720N Straight thickness gauge, 26 blades Length 3" .0015—025" **$3.90**
(C) OS-84 Precision injecting oiler, 6" long **$1.89**
(D) S-393 Plastic 4 oz. Industrial oiler **$3.90**
(E) S-395 Spring loaded pressure type oiler 4 oz. **$4.90**
(F) S-81 Standard screw starter, nylon handle **$2.40**
(G) S-82 Phillips screw starter, nylon handle **$2.50**
(H) WB-70 Stainless steel wire brush 9" long wire .005" filament..... **$1.85**

RELAY TOOL KITS

MASTER 15-PIECE RELAY TOOL KIT

Precision-made and professionally-designed group of new tools for adjusting and maintaining relays, contactors, switches, controls, and other components for the telecommunication and electronic industries.

Kit contains: 2 spring adjusters, tension & thickness gauges, Duck Bill plier, Screw Driver, Tweezer, Mirror, 4-way Tool, Brush, Armature & Stop Benders, Contact Spray, Contact Burnisher. **KIT K-55 $34.00**

NEW COMPACT RELAY ADJUSTING KIT

Precision-made tools for setting, adjusting and testing most type relays. All tools highly polished and made of finest quality steel for most accurate and delicate work. Packaged in fine protective zippered case.

Kit contains: Spring adjuster, Armature bender, Arm bender, Relay spring Duck Bill Plier, Burnisher, Tension gauge 0-50 gram. **KIT KR-6 $19.90**

RELAY & CONTACT BURNISHER-CLEANERS

DIAMOND BURNISHERS

Exclusive Features:
- Strong abrasive power
- Long lasting

Consists of abrasive Diamond particles - Developed for any type contacts: Silver, Platinum, Gold, Palladium, Tungsten, Molybdenum - Length 5⅝″ - Diamond coated face 1″ x ¼″ - Nylon Shaft - Three types to meet every application: Type 200 (coarse) for Industrial Relays - Type 300 (medium) for Intermediate and Telephone relays - Type 400 (fine) for Sensitive Relays.

K-234 Set of 3 ..... **$14.85**

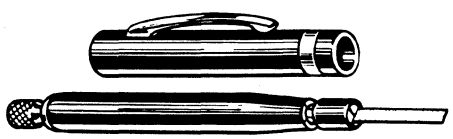
D-200	Shaft green ..	$4.95
D-300	Shaft red	$4.95
D-400	Shaft blue	$4.95

POCKET-TYPE BURNISHERS



Used for cleaning general type relay contacts. Economical—supplied with 6 non-residual abrasive replaceable blades stored in pen barrel. Pen made of sturdy plastic for dielectric work. Length 4½″ Dia. ⅜″ Blades 3/16″ wide 1¾″ long .007″ and .0035″ thick.

PEN #PB-7 (with 6 blades .007″ thick).....	$3.48
PEN #PB-3 (with 6 blades .0035″ thick)....	$3.78
BLADES #B-7 (25 replacement blades for PB-7)	$3.55
BLADES #B-3 (25 replacement blades for PB-3)	$3.65

ECONOMY BURNISHERS

For Industrial and general type contacts. Flexible, Non-residual. Leave no grit or dust and will not affect contact points. Plastic insulated handles for working on live contacts. Packaged in vinyl pouches for full protection.

(Standard packages 48 pcs.)

OB-1 (for fine contacts. Abrasive coated 3½″ long, 3/16″ wide, .007″ thick)..... **$.23 ea.**

(Standard Packages 48 Pieces)

OB-2 (for extra sensitive points. Non-abrasive, nickel plated) 3½″ long, ¼″ wide, .010″ thick ..... **$.42 ea.**

(Standard Packages 24 Pieces)

OB-3 (for general purpose contacts. Abrasive—cadmium plated. Hard molded handle. 3½″ long, ¼″ wide, .010″ thick) ..... **$.65 ea.**

TECHNICAL ADVANTAGES

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water white resin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original resin. Soldered joints made with Ersin Flux do not corrode, even after prolonged exposure to any degree of humidity. It has been tested under climatic conditions ranging from the Arctic to the tropics.

Ersin Flux reduces the surface tension of molten solder causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odors. Non-toxic in use.

Leaves nothing but pure resin on the work after soldering and may be used whenever plain resin is specified.

Complies with all pertinent federal specifications QQS-571.

Multicore construction. 5 separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder.

Guaranteed continuity of the flux stream prevents dry joints, i.e., those having high electrical resistance.

Although there are 5 cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction, which provides thinner walls of solder, than are found in same gauge single cored solder.

Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

Ersin Multicore Solder is non-toxic in use. Cadmium is completely eliminated. The quantity of antimony is less than government standards allow. There is no danger of harmful effects caused by such impurities.

Every package of Ersin Multicore is labelled with the exact tin/lead content. This precise labelling results from Multicore's precise manufacturing methods.

T Series tiplets are pure copper, pretinned to save you work. Since copper dissolves in solder, the PL series of tiplets have been developed for heavy industrial usage. This series has a protective layer of metal, impervious to solder, over the copper. A final silver coating is applied for ease in tinning.

Screw-in base heating units
High heat, right at the tip, minimizes the time required to bring a joint to soldering temperature. As a result, there is less possibility of damage to delicate components from heat conducted along their lead wires. Thermal time constant approximately 80 seconds.

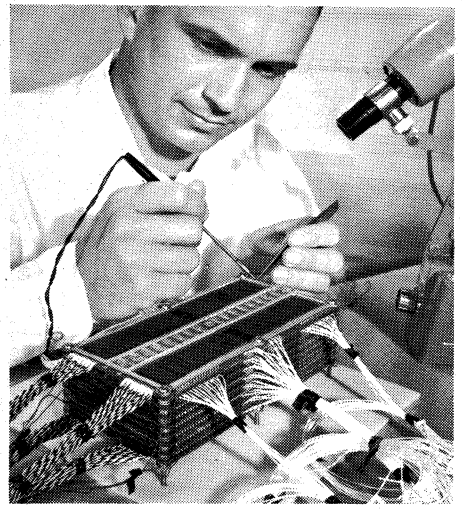
ORYX PRECISION SOLDERING INSTRUMENTS



FIVE REASONS WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

1. MINIATURE SIZE

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat **within** the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.

4. SAFETY

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

5. ECONOMY

A standard ORYX low-voltage industrial iron costs less than $5 in production quantities.

REPLACEMENT TIPS for low-voltage soldering irons

Oryx tips are precision machined from a special copper alloy with outstanding heat conduction characteristics. Nickel plating reduces scaling. Iron-plated tips and solid nickel tips give much longer life with slightly reduced heat transfer. Gold tips recommended for microcircuits only.

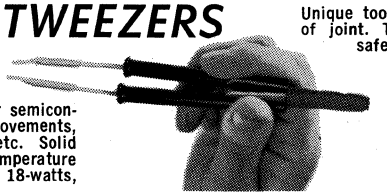
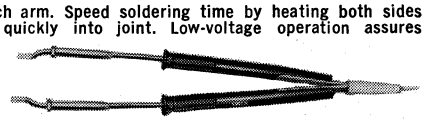
SOLDERING TWEEZERS

Unique tools with heating elements in each arm. Speed soldering time by heating both sides of joint. Tweezer action conducts heat quickly into joint. Low-voltage operation assures safety to circuitry and to operator.



MODEL TW-6—Precision model for semiconductors, solid state, hairspring movements, miniature relays, thermostats, etc. Solid nickel 3/32″ fixed tips. Nominal temperature 550° F. Weighs 1 oz. 6-volts, 18-watts, AC or DC.

MODEL TW-6, complete with 4½′ cord.....Net **$14.95 ea.**
(12 or more **$14.45** ea.)



MODEL TW-12
Heavy duty model for regular production-line soldering of radio, TV, radar, telephone, and switchboard assemblies. Furnished with replaceable 1/8″ N tips. Nominal temperature 625°F. Weighs 2 oz. 12-volts, 25-watts, AC or DC.

MODEL TW-12, complete with 4½′ cord.....Net **$14.95** ea.
(12 or more **$14.45** ea.)

THERMAL WIRE STRIPPERS

Reach those hard-to-get-at spots. Miniature tweezer design.

Ideal for repair and prototype work where a bench stripper is unsuitable. Strips Nylon, rubber, PVC, Kel-F, Polystyrene, and similar medium-temperature insulations. Stainless steel stripping heads are abrasive-tumbled to eliminate sharp edges which might damage conductors. Operating temperature: ST-6, 400°F. ST-18-6, 475°F., ST-18-12, 500°F. Furnished with 4½′ cord.

MODEL ST-6. For 6-volts, AC-DC, 12 watts.

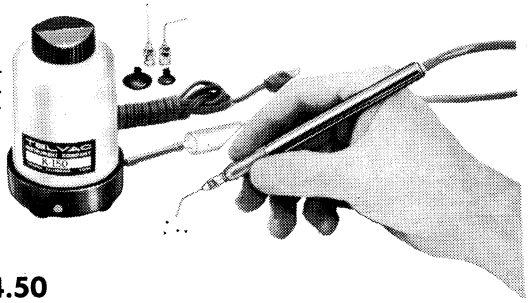
SC-115 (Use with Oryx 115-15 soldering iron.)
EITHER MODEL ..... Net **$2.25** ea.

NEW! VACUUM TWEEZER SYSTEM



This new parts-handling system positively and precisely lifts parts varying in size from microscopic to those weighing several ounces. Parts are handled without damage or contamination. Defects caused by pinching, scratching, or marring are eliminated. Critical surfaces are protected. Vacuum is turned on and off with the forefinger. For 115 V. A.C. complete system, ready to plug in.

HEADBAND VIEWER

Stereoscopic magnifier used in precision work

A stereoscopic magnifier with large field of view. Magnification 2½x at 8″. Accurately ground lenses have the required prismatic effect to prevent eyestrain. A watchmaker's glass may be switched to either eye to increase magnification to 5X at 2-3″. A hood shields the eyes from glare, even under brilliant illumination. The lower side is open, allowing unrestricted downward vision for handling tools and taking notes. May be worn with glasses.

Extra Blades for above per set Net 1.43

STRIP-ER-CLIP
Eight-stop gauge wire stripper. Strips and clips all wires from 12 to 26 gauge. Prevents accidental nicking or cutting of wires.
Cat. No. 595-X Net 1.38

ALL-PURPOSE WIRE STRIPPER
Automatically strips insulation from fine stranded wires. "Stay open" feature prevents crushing fine wires. Blades are easily replaced if necessary.
Cat. No. 591-00W Net 5.93

WALSCO OILETTE
Filled with high grade Walsco oil. Dispenses accurately one drop at a time. For use on electronic and electrical devices, clocks, office machines, sporting goods, etc.

(A) "THE LONG RANGER." A full 12", slim completely insulated tuner alignment tool. Features tough, replaceable, molded nylon tip.
Cat. No. 2523.....Net **$1.60**

(B) TURRET TUNER TOOL. A tool for adjusting all sets using "Standard Coil" and similar turret-type tuners.
Cat. No. 2522.....Net **$ .92**

(C) PHILCO TUNER TOOL. A special tool for 1946-48 front-end tuners.
Cat. No. 2518.....Net **$1.20**

(D) WIRE DRESSING & ALIGNMENT TOOL. A handy dual-purpose tool with a thin 7/32" plastic, handle. One end is a special tool for dressing wires in hard-to-reach places. Other end with a low capacitance metal screwdriver tip.
Cat. No. 2512.....Net **$ .45**

(E) K-TRAN ALIGNMENT TOOL. This tough, double-use tool is machined at one end to fit the slots on all K-Tran miniature I.F. transformers.
Cat. No. 2515.....Net **$ .60**

(F) "SLUG SAVER" TUNER TOOL. New patented tool for aligning "Standard Coil" front ends. Prevents "loosing" slugs, thru ingenious "step" design.
Cat. No. 2528.....7-1/2" long.....Net **$ .67**

(G) SLOTTED STUD DRIVER. An 8-1/4" long precision screwdriver with blade to fit No. 6 studs.
Cat. No. 2516.....Net **$ .92**

(H) I.F. ALIGNER. 2-1/2" long molded plastic ... for RCA, Zenith and others.
Cat. No. 2527.....Net **$ .58**

(J) STUBBY STUD DRIVER. The only screwdriver only 2" long overall. Fits No. 6 studs.
Cat. No. 2517.....Net **$ .60**

(K) STANDARD ALIGNMENT TOOL. Screwdriver blades are made with extra-thin tempered Swedish steel and are recessed so that they will slide easily over a stud and will not slip off.
Cat. No. 2519.....Net **$ .67**

(L) SLOTTED SCREWDRIVER. Instead of a blade, this tool has a slot to fit No. 6 studs. For many of the older TV sets.
Cat. No. 2524.....Net **$1.00**

(M) DOUBLE ENDER. A 5-1/2" long, molded-nylon tool with one end to fit hex studs, the other end being a very small screwdriver.
Cat. No. 2526.....Net **$ .37**

(N) I.F. ALIGNER TOOL. Designed for I.F. Alignment of Zenith, RCA and other similar types. Made of molded plastic 5-1/2" long.
Cat. No. 2521.....Net **$ .53**

(O) WALSCO TV-FM ALIGNMENT TOOL KIT. Kit contains 12 tools. These are all standard Walsco tools and come in a handy leatherette case or wall rack for mounting above work bench.

Weller DUAL HEAT Soldering Guns

Dual heat. All Weller guns offer Dual Heat, an original Weller feature that provides two tip temperatures from the same gun. Two trigger positions permit instant switching to high or low heat, whichever is best suited for the job. The use of low heat prevents damage when soldering near heat-sensitive components and prolongs tip life. High heat is instantly available when needed.

Instant heat. Solders in seconds. No waiting for the tip to heat. No wasted current.

High-Efficiency Tip. Made of copper for superior heat transfer and optimum soldering results. Slips easily into difficult places.

Exclusive Tip Grip. Wiping action of tip fastening nuts eliminates contact resistance and oxidation. This assures full, constant heat.

Spotlight. Illuminates the work and eliminates shadows.

Fingertip control. Heat is instantly "on" when trigger is pulled, instantly "off" when trigger is released. No need to unplug the gun. No danger of damage from an idling hot tool.

Operating comfort. Compact design and perfect balance make precision soldering easy and eliminate fatigue.

Guaranteed one year. All Weller guns are UL and CSA approved, and guaranteed for one year against defects in material and workmanship.

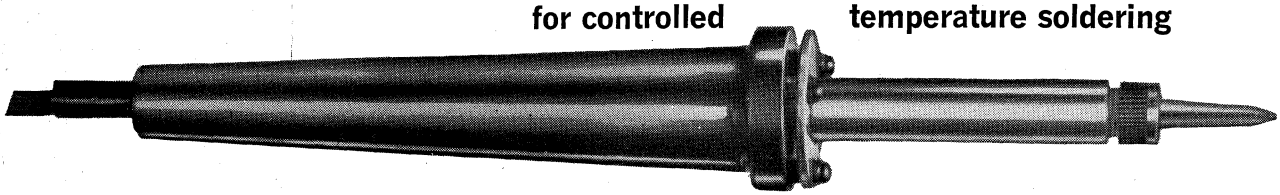
Weller MAGNASTAT® Soldering Irons

for controlled temperature soldering



Only Weller brings you soldering irons with temperature control in the tip. One Magnastat iron with 3 different controlled temperature tips does the work of 3 different irons. And it maintains proper temperature for secure, reliable soldered connections.

- Tip temperature will not vary more than ±3% when idling.
- A Magnastat iron provides efficient soldering temperature under load and excellent recovery.
- Your choice of 3 different controlled temperatures by interchanging Magnastat tips.

STANDARD WELLER MAGNASTAT IRONS

MODEL NO.	WATTS	TIPS
W-60	60	5-CIN—750°F
W-80	80	6-EIN—750°F
TC1202	120	12-G4N—750°F

Furnished with standard two-wire cord and tip number designated.

- Weller Magnastat irons do the work of uncontrolled irons that require much higher wattage and weigh twice as much.
- The light weight of a Weller Magnastat iron reduces operator fatigue. Handle remains cool.

Over 90 Magnastat Wellertips are available. Tips come in 3 controlled temperature ranges—600°F, 700°F and 750°F—and in many different shapes.

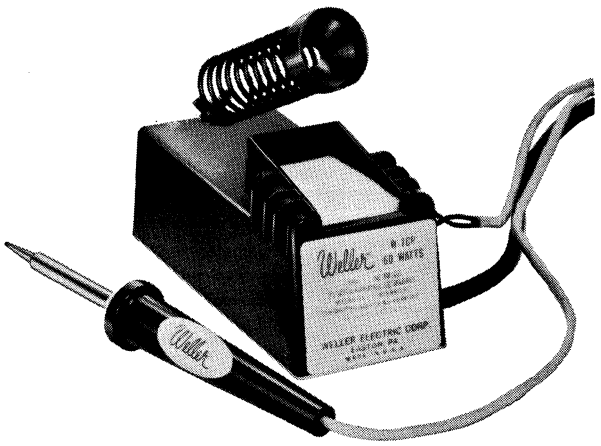
Weller® PENCIL Soldering Units



Temperature Controlled "Low Voltage" Soldering Pencil with 3/16" 700°F tip and power unit—**MODEL W-TCP**

SPECIFICATIONS

Wattage	Voltage	Weight with Tip, Less Power Unit and Cord	Overall Length of Iron with Tip	Tip Retainer O. D.
60	120 V.* 50/60 Cycles	1¼ oz.	7½"	5/16"

*230/250V., 50/60 Cycles available upon request at same price.

Temperature Controlled "Low Voltage" Soldering Unit

For production line and research laboratory use where accurate control of tip temperature is essential to meet rigid soldering specifications. Choice of 4 different tip temperatures from one soldering pencil merely by interchanging 4 different controlled temperature tips.

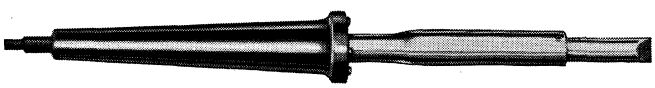
- Temperature control is in the tip. Choice of 500°F, 600°F, 700°F and 800°F tip temperatures.
- Extremely small and light in weight. Easy to control.
- Suitable for miniature or general soldering.
- High efficiency and rapid recovery. Packed with plenty of reserve power.
- Low 24 volt operation for component and user protection.
- Isolated for elimination of leakage current.
- Handle of high-impact plastic remains cool.
- Interchangeable tips are premium plated.
- Soldering iron stand attached to power unit.
- Power cord is silicon rubber covered, extremely flexible and easy to maneuver. Doesn't break or burn.

Interchangeable tips available: 1/16", 1/32", 3/32", 1/8", 3/16" and 1/4" screwdriver with choice of 500°F, 600°F, 700°F and 800°F controlled temperatures.

Continuously Variable Temperature Controlled Soldering Unit with SCR and Thermistor Control Circuit

Features continuously variable tip temperatures from 200°F to 450°F—simply dial the temperature required. This unit is specifically engineered for low-temperature, miniature soldering applications. Interchangeable tips include 1/16" (standard) and 1/32" conical flat. Otherwise identical to W-TCP (above) except wattage: 20 instead of 60.

Weller® Utility Soldering Irons



Marksman Soldering Irons

Feature stainless steel, long-reach barrels, 1/8" replaceable tips. All operate at 120 volts; all provide Weller quality.

Model No.	Wattage	Weight (Oz.)
SP-23*	25	1¾
SP-40	40	2
SP-80	80	4
SP-120	120	10
SP-175	175	16

*Also available as a kit (Model SP-23K). Includes iron; screwdriver. cone and chisel tips; soldering aid and extra supply of solder.

"Industrial Rated" Pencil Soldering Irons

- Low cost 115 volt iron has tip temperature of 860°F with 25 watt input. Ideal for miniature type soldering.
- High efficiency and rapid recovery.
- Does the work of irons that require much higher wattage.
- Lightweight design reduces operator fatigue, provides accurate control.
- Rugged heating element designed for durability, long service.
- Readily replaceable parts. Change your own heating element or cord set.

Interchangeable tips available: 1/16", 3/32" and 1/8" screwdriver. Premium plated for long life.

WALLBRAND SOLDERING PENCILS, IRONS AND GUNS

SINCE 1864

Here are a few of the reasons why engineers choose WallBrand pencils and irons. They're Thermogram Rated for better efficiency. Cooler Handles. Feather Light. Perfect Balance. Extreme Operator Comfort.

Production Line Model 18HD—Thermogram Value: 300—25 watt input. Engineered for continuous precision soldering applications, the Model 18 has a total weight (less cord) of only 1½ ounces. A wide selection of tips available. Specifically engineered for the demanding applications of micro-circuitry, and high density packaging, precision work on solid state devices, printed circuits, etc. Designed with the critical temperature ranges of micro-miniature components in mind.

Production Line Model 14HD—Thermogram Value: 900—40 watt input. The Model 14 has the same precision components as the Model 18 and is designed for continuous production line work requiring more heat in a wide variety of tip sizes. Also 50 watt. Now, in addition to the present Wall soldering pencil irons, you can have Wall soldering pencils in a *new plug type system.* All heating elements for the 614-618 and subminiature 6116 are interchangeable with one handle and cord assembly.

HD Type for continuous, heavy duty soldering requirements:
• Triple-life resistance wire wound on pure mica. • Offers constant, even tip temperature. • Extra fast recovery. • Excellent balance. • 120 or 130 volts, ac or dc (other voltages on request).

The Wall Trig-R-Heat Soldering Gun—Feather light, 14 oz., no heavy transformer. You can reach hard to get spots, tip will not deform. It has an insulated spot light switch, independent of trigger action. Heats instantly, recovers instantly. Rugged, precision built, made to last. One gun with two interchangeable tip and element assemblies to solve all soldering problems. This gun is made for the man who wants the best.

Economaster 6316—Industrial type soldering pencil at a popular price. Light weight, excellent balance, rugged construction, stable tip temperature. Ideally suited for all soldering applications.

14DS New Wall Desoldering Tool—Keeps solder in a molten state in reservoir, operated with one hand, fits existing Wall HD Iron. Replaceable tip (.080 opening).

538HD Swivel Iron—Adjustable, seven positions. From straight to 90° in 15° increments. Quick positive locking adjustment. 80W or 100W ⅜″ tip size.

2AG Heat Gun, AG Heat Gun—Plug-type hot air guns from 200 to 600 watts, adaptable for any usage requiring up to 1000° F. **2AG pistol grip** available with trigger at additional cost. Opens air and heat at same time. Apply heat only when you need it. **AG handle grip.** One heating element fits both guns. All five tip styles interchangeable. Special tips upon request. Three-wire cord assembly. The perfect guns for hundreds of different uses—to shape, form, weld and seal thermoplastics. Excellent heat source for shrinkable tubing. Gun includes neoprene air hose, hose fittings and pressure regulator valve.

Soldering Tips for Pencils and Irons—Wall has an extremely wide selection of soldering tips. Write for Bulletin I-464. These soldering tips are available in three different series, for WallBrand irons and pencils.

Anniversary—Industrial grade. Highest quality. Copper core. Special iron coating. Centerless-ground shaft. Non-freeze. Bright finish. Ultra long life for precision work and rigorous production line demand.

WallKlad—Industrial grade. Copper core, iron coating chrome plated for production applications, critical laboratory use.

WallBrand—Commercial grade, copper, nickel plated for some production and all commercial applications.

A complete selection of tips from ⅛″, 3/16″, ¼″, ⅜″, ½″, ⅝″ and ⅞″. Special tips to specification, designed upon request.

New Soldering Tip Dispenser Pac. WallBrand tips are available in a handy tip dispenser pac. Tip sizes ⅛″ through ⅜″. This unique Wall development keeps tip individually sealed in a color coded, continuous belting, plastic envelope. These envelopes are loaded in the popular Tip Dispenser Pac. The WallBrand individual Tip Dispenser Pac is ideally suited for production line station or stock distribution.

WALL MANUFACTURING CO.,

Industrial Soldering Pencils are built to exceed federal specification W-S-570a as amended. WallBrand soldering products are UL and CSA listed.

"BLUE CHIP" TRANSFORMERS

62 TYPES
5 DIFFERENT SIZES

Tiny, plastic cased, Blue Chip transformers for printed circuit applications, are available for a wide choice of power ratings.

Five different sizes, from .10 to 1.2 cubic inches with a total of 62 new ratings are listed below to indicate the available power levels for both voice frequency range and extended frequency operation. These ratings take into account not only power handling capacities at minimum frequencies, but also total harmonic distortion under stated conditions. Within the limits shown on the rating charts, variations in both power and distortion levels are possible depending upon the minimum operating frequency.

Blue Chip transformers meet Mil-T-27A, Grade 5, Class S requirements. These versatile transformers are available from ADC, or through your distributor.

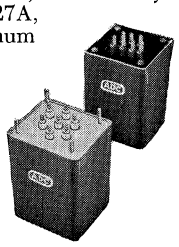
POWER TRANSFORMERS *FOR MILITARY AND INDUSTRIAL APPLICATIONS*

Reliability, minimum size and long life under rugged environmental conditions are prime requisites in today's military electronic equipment. To meet these modern standards, ADC offers a complete line of hermetically sealed power transformers. Designed to meet MIL-T-27A specifications and utilizing MIL cases and mounting dimensions, these units offer our customers a ready source for prototype and production applications. All military contractors and commercial electronic engineers with stringent environmental conditions will find these carefully rated units ideally suited. For those applications where hermetic sealing is not necessary, we offer the conservative transformer designs of our hermetically sealed line, in drawn steel cases of MIL size and mounting dimensions with phenolic terminal plates and solder lug terminals.

POWER TRANSFORMERS—60 Cycle

ADC offers these standard power transformer designs to cover a wide range of requirements for electronic circuit application. They are available in standard MIL case sizes, hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R, life expectancy X. Maximum operating altitude is 10,000 feet.



The same electrical ratings are also available as commercial grade fully enclosed units for non-military applications in the same MIL case sizes. This version is furnished with a phenolic terminal board and heavy duty solder lug terminals. Mounting screws and tapped inserts provide the same mounting centers as MIL-T-27A versions.

POWER TRANSFORMERS—400 Cycle

These items are especially designed for maximum performance in 380 to 1500 CPS applications, with maximum altitude ratings of 50,000 feet. They are hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R. Standard MIL case sizes and construction are used.

MILITARY STANDARD TRANSFORMERS

These Military Standard transformers have been specified by ASESA and are established by the three Military Services and the transformer industry as standards for Military transformer applications. Each item is available as either Grade 1 or Grade 4 (ruggedized) as requested. Tests have been conducted in ADC's environmental laboratory which indicate that these units will meet the requirements of MIL-T-27A, Grade 4, Class R operating temperature; life expectancy X 10,000 hours minimum).

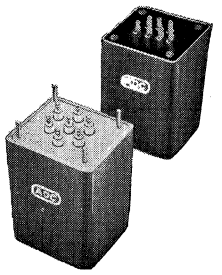
AUDIO TRANSFORMERS *FOR MILITARY AND COMMERCIAL APPLICATIONS*

ADC offers the following designs to cover a wide range of standard audio applications, from low power transistors through heavy duty output circuits. They are conservatively rated at ±½ db from 30 to 15,000 cycles at the maximum rated power. Each is designed for minimum insertion loss, is fully impregnated before potting and rated for dependable continuous duty operation.



These audio transformers are available in standard MIL cases, hermetically sealed to meet all requirements of MIL-T-27A. THE SAME RATINGS ARE ALSO AVAILABLE AS COMMERCIAL GRADE COMPONENTS, featuring the lower cost construction of a phenolic terminal board with solder lug terminals in the same drawn MIL cases.

INPUT TRANSFORMERS Response ±½ db, 30-15,000 cps

MILITARY STANDARD AUDIO TRANSFORMERS

These Military Standard audio transformers have been specified by ASESA and are established by the three Military Services and the transformer industry as standards for Military transformer applications. Tests have been conducted in ADC's environmental laboratory which indicate that these units will meet the requirements of MIL-T-27A, Grade 1, Class R operating temperature, life expectancy X (10,000 hours minimum).

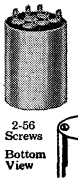
NOTES:
[1]These items are not normally carried in stock.
[2]"Split" indicates 2 separate, symmetrical windings. Impedances shown are for series connection. Where impedances are shown in parenthesis, they indicate the impedances resulting when windings are connected in parallel.
[3]Balanced, for Williamson type circuit operation.
[4]Has primary taps suitable for Screen loading
[5]Power response ±½ db, 50-15,000 cps.
[6]Response is ±1 db, 30-15,000 cps.

All of these designs are available on special order with output impedances of other values than shown above.

MINIATURE AUDIO TRANSFORMERS



These transformers offer a variety of special design features on a catalog basis for particular circuit and chassis applications. They are available for plug-in and printed circuit applications as well as standard installations. The special cases shown allow the maximum of electrical performance for each type as well as variety and flexibility in mechanical arrangement. All electrical ratings are shown for continuous duty at full specified power levels. Dia. ⅞", Ht. 1⅜", 2-56 Mtg. screws on 11/16" centers.

TELEPHONE COILS

For many years, ADC has been a dependable source of transformers and filters for the telephone and telegraph industry. Recently, we have designed and tooled for additional items in a series of "coils" which are electrically and physically interchangeable with similar components made by Western Electric. These items are listed below with the equivalent Western Electric number. All items in this series can be supplied in MIL cases if desired.

ADC REPEATING COILS

104A—Cord Circuit. This repeating coil is designed to have good transmission efficiency for voice frequencies. Low frequency ringing currents are attenuated and circuit will not ring through. Case is heavy steel to eliminate all cross-talk. Core will not saturate at maximum normal current.

104B—Phantom. The 104B Repeating Coil is a 4-winding coil, for use in phantom circuits. The phantom winding (5-6-7-8) is parallel wound. Heavy Formvar wire is used for maximum surge voltage or lightning protection. This coil has good transmission efficiency at both ringing and voice frequencies.

INDUCTION COILS

103A—Induction Coil is a 2-winding coil for local battery telephones.

103B—Anti-Sidetone Induction Coil is similar to 103A, but with an additional winding for anti-sidetone connection.

103C—Anti-Sidetone Induction Coil is designed for common battery telephone use.

MINIATURE TRANSISTOR AUDIO TRANSFORMERS

These high quality miniature transformers are high efficiency audio components featuring hermetic sealing for maximum protection against electrolysis and subsequent corrosion of fine wires caused by moisture penetration. The units are constructed in accordance with MIL-T-27A Specifications. Transistor transformers can also be supplied in an open or encapsulated type of construction.

MINIATURE TRANSISTOR TRANSFORMERS

These high quality miniature transformers are high efficiency audio components featuring hermetically sealing for maximum protection against electrolysis and subsequent corrosion of fine wires caused by moisture penetration. The units are constructed in accordance with MIL-T-27A Specifications.

Transistor Transformers can also be supplied in an open or encapsulated type of construction

PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is ± 1 DB from 30 to 15,000 cps. All units feature excellent performance characteristics with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "EIA" standards.

Transformers PGA 1 through PGA 10 are supplied in hermetically sealed cases.

HIGH "Q" REACTORS

QGC—are hermetically sealed, MIL-T-27A, Grade 4, Class R, High Q Reactors for low audio frequency application with an excellent inductance stability with variations of A.C. and D.C. currents, frequencies and temperatures.

SPECIAL REACTORS:
(1) with a center tap
(2) with a split winding
(3) with inductances other than those listed can be supplied.

Transformers meeting MIL-T-27A specifications Grade 1 through 6 with temperature characteristics of Class S, T, or U can be supplied on special order.
Encapsulated units using either Epoxy-Resins or Fosterite can be supplied for Grade 2 and 5.
Class U components can be supplied molded in special high temperature Freed resin.

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

HERMETICALLY SEALED, MIL-T-27A, GRADE 5, CLASS S FILTER REACTORS

These reactors have a split winding for series or parallel connections.

When using two sections in parallel, double the Idc. Both inductance and resistance are divided by 4.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A(graded 1 or 4 and 2 or 5 respectively.)Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SF Non-stabilized cores, ±2½% inductance variations from —55°C to +85°C.
SN Non-stabilized cores, +2% inductance variations from —55°C to +85°C.
SE Temperature stabilized cores, +0.1% to —0.4% inductance variations from —1.5°C to +54°C.
SB Temperature stabilized cores, ±0.1% inductance variations from +13°C to +35°C.
SD Temperature stabilized cores, ±0.1% inductance variations from —1.5°C to +54°C.
SW Temperature stabilized cores, ±0.25% inductance variations from —54°C to +85°C.
SM Temperature stabilized cores, ±.25% —65°C to +125°C.
SP Temperature stable carbonyl iron cores, ±0.3% inductance variations from —55°C to +85°C.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED TRANSFORMER CO., INC.

MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

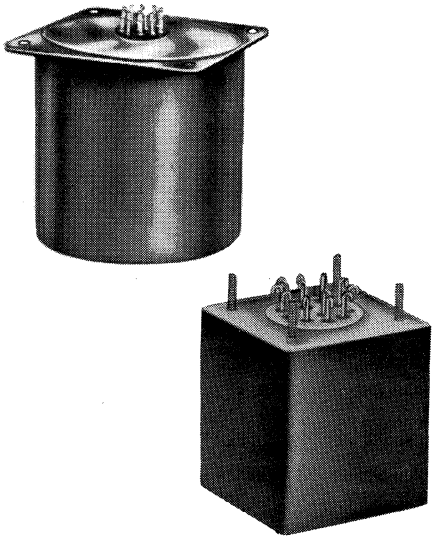
The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of —55°C to +75°C.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.



FAST RESPONSE MAGNETIC AMPLIFIERS

The MAF Type of fast response magnetic amplifier combines high power gain, ruggedness, and reliability with a maximum 2 cycle response. All MAF units are phase-reversible.

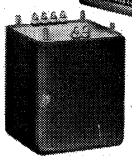
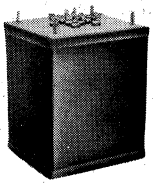
TRANSISTOR CONVERTERS





THE FREED LINE OF DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters. DC to DC converters in hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation.

Special regulators can be supplied to compensate for this variation.

- **RUGGED, QUIET, MAINTENANCE FREE, LONG LIFE OPERATION.**
- **HIGH POWER TO WEIGHT RATIO, ARC-FREE OPERATION.**

DC TO DC CONVERTERS

All TDC units are Hermetically Sealed, Oil Filled. Mtg. base plate must be mounted on a sink of sufficient area to maintain a base temperature of 70°C. Maximum output regulation 5% from half load to full load. Ripple frequency 4 to 5 KC; Ripple content 0.1%.

TELEMETERING COMPONENTS

A complete line of Band Pass Filters, Low Pass Filters and Discriminators is available for multi-channel telemetering applications. These components cover the frequency range from 400 cps to 70,000 cps. The filters feature **exceptional phase linearity,** excellent selectivity characteristics and plug-in construction. The Discriminators, either fixed or slug tuned, have exceptional linearity, high amplification, and utmost stability.

TELEMETERING BAND PASS FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327

These filters cover the frequencies from 400 c.p.s. to 70KC. Narrow frequency B.P.F. have a band width of ±9¼% of center frequency and 45 DB (minimum) points at ±7½% of center frequency of higher or lower adjacent channels. Wide frequency B.P.F. have a band width of ±19½% of center frequency and 50 D.B. points at ±15% of center frequencies of higher or lower second adjacent channels.

FREED FILTERS

To MIL-T-27A and MIL-F-18327

Freed Standard Filters are **Hermetically Sealed Miniature and Sub-Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LLP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance—10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage.)

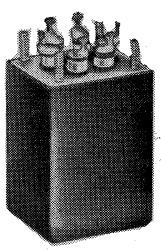
SERIES 1950 NULL "T" FILTERS



The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

Prices on request.

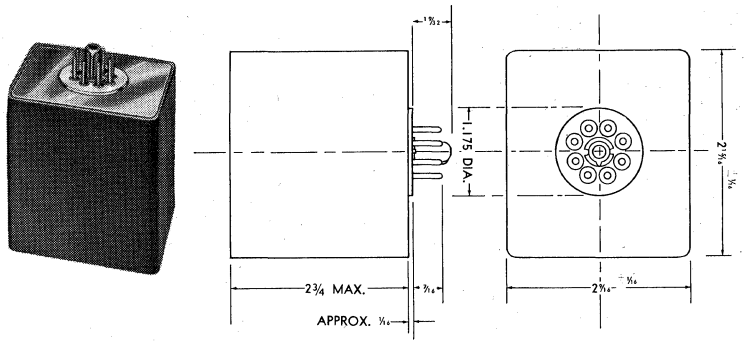
TELEGRAPH TONE CHANNEL FILTERS

HERMETICALLY SEALED TO MIL-T-27A AND MIL-F-18327 SPECIFICATIONS

Freed Band Pass Filters are extensively used in multiplex frequency shift transmitting and receiving. Stock filters cover all narrow and wide band channels. All units are built with a standard octal socket.

FBT Transmitting Filters are built for a 600 ohm in and out characteristic impedance. Filter configuration allows paralleling of channel outputs. 10db adjacent channel crossover attenuation.



FBR Receiving Filters are designed for a characteristic impedance of 600 ohms in and out. Filter configuration permits paralleling of channel inputs. 20db adjacent channel crossover attenuation.

New developments and applications of ultrasonics for industrial cleaning, soldering, welding, and mixing have created a demand for generators and components specifically designed for ultrasonic applications.

Using the latest developments in the field of special magnetic materials the FREED ultrasonic transformers are designed for greatest efficiency and maximum reliability. They feature small size excellent performance and long life under continuous duty operation.

Transformers with an extended frequency range (frequencies up to 2 MC) can be supplied upon request.

COMMERCIAL GRADE COMPONENTS

These components are designed to meet the demand for low-cost replacement parts for commercial electronic equipment.

The best commercially available materials have been utilized in the design of these units, to insure reliability and excellent performance characteristics. Vacuum impregnation with a non-hygroscopic varnish to prevent penetration of humidity are employed to give these units long life and trouble-free performance.

230-115 V, 50-60 C.P.S. Stepdown Transformers rated from 25 V A up to 5,000 V A Rating and line booster transformers are included in this series.

All units, with only a few exceptions, are uncased or of shell-type construction.

Isolation transformers and Stepdown transformers are equipped with line cord and receptacle.

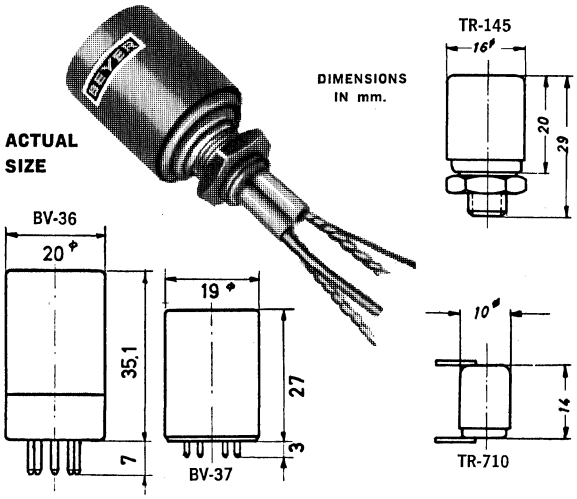
GOTHAM

BEYER TRANSFORMERS
MINIATURE AUDIO



The BEYER line of miniature audio transformers distributed by GOTHAM represents over 30 years of experience in the field on the part of one of Europe's largest quality microphone manufacturers. It is for this reason that we make only one type of transformer in two sizes: A low level audio transformer suitable for microphones, tape playback heads, etc.

A special winding process permits these transformers to be made in this miniature size while maintaining studio quality frequency response, distortion, and level capability. The coil is wound on a continuous laminated core which means the elimination of the split core with its inherent losses. Result is a semi-toroidal construction with its superior resistance to hum induction.

BEYER transformers are used in professional audio equipment by such outstanding manufacturers as Ampex, Bauer, Collins, Precision Instrument, Rust, and many others. All transformers are made to special order to O.E.M. users' specifications. Samples can be supplied within 2 weeks, production usually within 4 weeks.

FOUR PHYSICAL MOUNTINGS ARE AVAILABLE:

Threaded Stud: The Model TR-45 Commercial Quality and TR-145 Studio Quality units are offered in mu-metal housing with threaded stud supplied with two nuts.

Solder Lug: The Model TR-45L and TR-145L are same as above but have radial lugs each end of housing to permit terminal board or Vector socket mounting. Also available in sub-miniature TR-710 Model (see fig.). Primary and secondary windings brought out opposite ends of mu-metal can.

Plug-in: The Model BV-36 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing with 7-pin miniature plug base. Same mu-metal shielding.

Printed Circuit: The Model BV-37 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing only 1.09″ high with special 7-pin, 8-pin, or 9-pin printed circuit base.

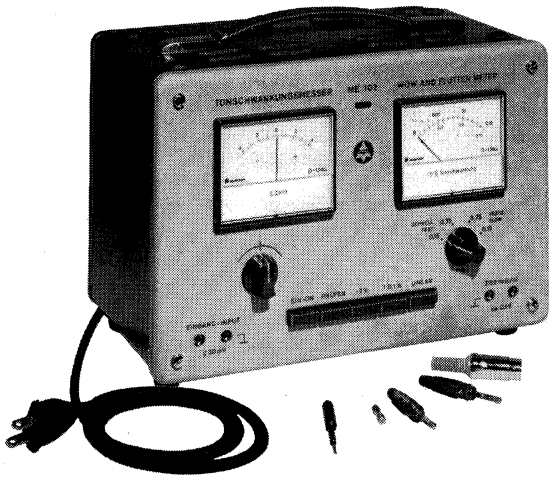
ELECTRICAL CHARACTERISTICS:

Transformers are supplied with any turns ratio from 1:1 to 1:150, tapped and split windings, static shielding, high voltage test, vacuum impregnating or other requirements.

TYPICAL TRANSFORMER SPECIFICATIONS:
Model TR-145/BV35570 (This Model stocked)

Turns ratio	1:15 ±10%
Impedance ratio	200/45,000 Ohms nominal
Frequency response	±0.2 dB 20 - 20,000 cps.
Maximum input level at 1% THD	370 mV at 30 cps.
Primary open circuit inductance (50 cps)	6.0 H
Primary open circuit impedance (50 cps)	1000 Ohms
Primary DC resistance	70 Ohms
Secondary DC resistance	10,000 Ohms
Hum shielding (EIA std.)	> 70 dB.
BASIC PRICE IN QUANTITY OF 1000 UNITS	$6.48 each

WOW & FLUTTER METERS
ME 101/102



The ME-101/102 instruments are intended for the measurement of the wow and flutter content of all types of recording and reproducing devices. They are fully transistorized, simple and convenient to use. The units are particularly suited for production testing and service work in addition to laboratory testing.

An internal signal generator provides the standard frequency of 3150 Hz. For the purpose of static and dynamic recalibration of the measuring unit, the generator can be detuned in a definite manner or can be frequency modulated from the power line.

Tone fluctuations from ±0.02 to ±2.5% for the ME-101 and ±0.01 to ±0.75% for the ME-102 can be read linearly or weighted as quasi-peak values (according to CCIR and DIN). Hence the properties of high quality tape and record playing equipment, as well as those of dictating machines and home equipment come within the ranges of the instruments. The fluctuation meter ballistics conform to the CCIR standard. A second instrument, the "drift" indicator, measures the frequency deviation of the recorded tone from 3150 Hz. Both indicating instruments can be switched to "rapid" or "slow" indication, as desired.

Besides the normal measuring connections on the front of the instruments, the back is provided with a connector for testing home tape recorders and record players. Other connectors are provided for the connection of external filters, oscilloscopes and graphic recorders.

SPECIFICATIONS

POWER: ..... 110-125/220-240V, 40-60 Hz.

OSCILLATOR UNIT:

Measuring frequency: 3150 Hz (constancy 1 × 10^3 after starting up period).

Output voltage: Approx. 0.4Vrms at test output connector and approx. 20mV (p. p.) at auxiliary output.

Calibrating device: +2% detuning for static and ±0.3% (60 Hz) for dynamic recalibration of measuring unit.

MEASURING UNIT:

Input voltage: ..... 30mV to 30V, 3150 Hz ±5%.

Input impedance: ..... >10 kOhm.

Measuring ranges: ME-101 — ±0.02 to ±0.5% and ±0.1 to ±2.5%; ME-102 — ±0.15% and ±0.75%.

Frequency response of fluctuation indication: Linear position, 0.50 to 500 Hz (-3 dB points). Weighted position, according to CCIR standard with external filter as required.

Drift indication: ..... Max. ±4.5%.

Auxiliary output: ..... Approx. 20V peak to peak at 22 kOhm.

Dimensions: ..... 7″ x 8″ x 11¾″.

Weight: ..... Approx. 11 lbs.

ME-101 — net price F.O.B. N.Y. ..... $375.

ME-102 — net price F.O.B. N.Y. ..... $395.

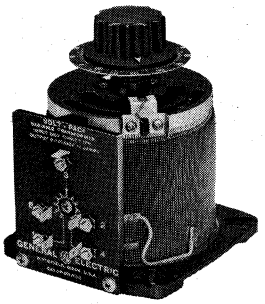
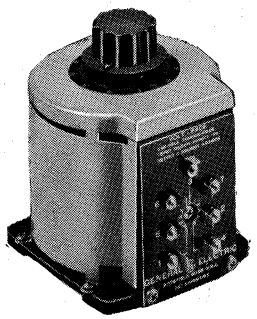
volt-pac® VARIABLE TRANSFORMERS

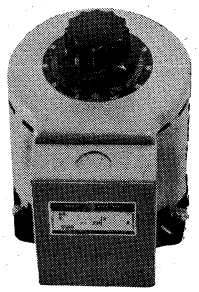
ELECTRONIC INNOVATIONS IN ACTION



Manual uncased unit—exposed terminals



Manual cased unit—exposed terminals



Manual cased unit—enclosed terminals

The Volt-Pac variable transformer is a control device which provides continuously adjustable output voltage from a fixed line input to vary the voltage applied to a particular electrical load. With Volt-Pac units, output voltage is changed by flux transformation . . . in the unsaturated range of the magnetic core. The results . . . low cost, versatility, reliability, simplicity, and no wave form distortion.

Volt-Pac units, for surface or back-of-panel mounting, are designed for operation in ambients of —20C to +40C at full rated load, and under all load conditions have low electrical losses.

* When Overvoltage Connection is used, rated current should not be exceeded. Output kva for Overvoltage Connection is maximum output voltage times rated current.

† When using extended tap connections, operation is for 60 cycles per second only.

‡ Output at Overvoltage Connection is 0-132 volts.

§ When operated on lower input-voltage tap, rated current must be reduced when output voltage exceeds 140 percent of input voltage.

¶ For Line-voltage Connection only — No Overvoltage Connection provided.

■ For 240-volt input, 0-240-volt output, application only.

• For 480-volt input, 0-480-volt output, application only.

ϕ 60 cycles only.

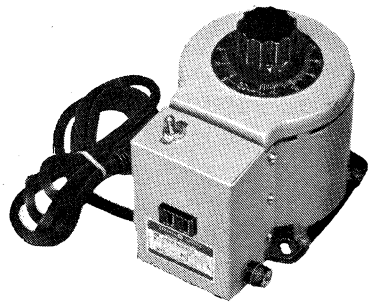
PLUG-IN SETS

For laboratory or shop source of adjustable a-c voltage. Provides output voltage of 0-117% of input voltage. Equipped with a line switch and a fuse for overload protection.



Cord is 6 feet long.

MICRO-MINIATURE AUDIO AND TRANSISTOR TRANSFORMERS — MM AND MMT SERIES

MM-M (Fig. E): Molded, for plug-in printed circuit applications. Cast epoxy resin for high resistance to extremes of ambient temperature. MIL Type TF6RX — ZZ (Insert MIL No. from table). Size 7/8″ x 25/32″ x 17/32″ with 5/32″ pins, .020″ dia. Weight, ½ oz. **MM-H (Fig. F):** Hermetically sealed with high compression glass terminals. Gray enamel finish. MIL Type TF4RX — YY. Size, 13/16″ dia. x 1 1/16″. Weight, ¾ oz. **MM-FB (Fig. G):** Open frame with channel on special order. MIL Type TF6RX — ZZ. Size, 1 3/16″ x 1 9/32″ x 1 5/32″, plus tabs. **MM-CM (Fig. H):** Contour molded on special order only, size 7/8″ x 5/16″ x 25/32″. Designed for chassis mounting with solder terminals on top of transformer.

MICROTRAN Miniaturized Transformers

LOW LEVEL CHOPPER INPUT TRANSFORMERS

Efficiently transfers 30—500 cps. Transducer or thermocouple signals to instrument amplifiers. Resin impregnated to minimize mechanical vibration noise signal. Three mu-metal and two copper shields insure low hum pickup. Accurate center taps and external electrostatic shield connection improve low level operation. Signal level range. 0.5 μv to 0.5 v. 90 db magnetic shielding. Size, 1⅜" dia. x 1²³⁄₃₂" h — 2 (6 x 32 x ⅜" stud), on 1½" centers. Weight 4.5 oz.

MODEL 400K TRANSISTOR TRANSFORMER SELECTOR KIT (FIG. C)

- **IDEAL FOR BREADBOARD CIRCUITRY**
- **FULL DESIGN DATA**

Set of nine transistor transformers covers impedance range of 150 through 200K ohms, matching most new transistor impedance ratings. Sizes range from a ⅜" cube to ¾" x ¾" x 1". All units vacuum resin impregnated for long, reliable life and for protection against rough handling. Each type has 4" color-coded leads. Includes full design data: nomographs and circuitry for determining correct impedances for Class A and B transistor amplifiers; power versus dbm chart; terminal connection sheet; guide to MIL-T-27B; cross reference index; outline drawings for later selection of stock items with same electrical ratings in many other mechanical constructions. Individually boxed in transparent plastic case. **Model 400K Transistor Transformer Selector Kit** Net Each $29.50*
*Standard quantity discounts do **not** apply.

MICROTRAN TRANSFORMERS ARE AVAILABLE IN MANY OTHER MECHANICAL AND ELECTRICAL TYPES ON SPECIAL ORDER. WRITE FOR COMPLETE INFORMATION.

Separate Sampling Department for quick delivery. Immediate service assured by large stocks of high temperature insulation and other specialized materials. IN-PLANT TESTING assures full compliance with military requirements and often saves weeks on contract completion. Units can be supplied to meet MIL-T-27B, MIL-T-9219, CAA-R-9786, MIL-E-5400, MIL-E-16400, MIL-E-4158, MIL-E-8189A, MCREE-553, MIL-T-21200, MIL-Q-9858.

RECTIFIER TRANSFORMERS

Transformers are with 2 — 18 volt center-tapped windings. Connected in series delivers 36 volts as rated. Connected in parallel — delivers 18 volts at twice rated current. (Taps 9, 18, 27, 36 V.)

Primary taps at 100, 105, 110 and 115 volts available on 12 amp, 24 amp, 30 amp and 50 amp transformers. No extra charge.

FILAMENT TRANSFORMERS — THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designed. All have 117 V. 50/60 cycle primary.

North Hills wideband transformers have been designed for low insertion loss (less than 1 db) and good matching characteristics over wide frequency ranges. Balanced windings feature extremely low unbalanced voltages and have a center tap. Complete specifications are available upon request.

Several case styles are offered. Series AA models are potted in metal cases with a terminal board on the bottom and two 6-32 spade mounting bolts. Series BA are hermetically sealed with glass terminals at the case ends and two 4-40 studs on the bottom for mounting. Series BB is similar to BA except that the unbalanced connection is provided by a BNC connector. The above three styles are rated at 2 watts. Series FA, GA, and HB are hermetically sealed and are rated at ½ watt.

Seven basic physical types meet most industrial requirements with long, maintenance-free life. Excellent regulation at any point within the rated load; free from wave-form distortion. U/L Listed for VT4 and VT8 units rated 120 volts input. Direct-reading 2-scale (1 per side) dial supplied; CCW also available. New space-saving low power types VT1, VT02 and VT3 have adjustable shaft independent of brush assembly, 3-way terminals, instantly replaceable brush contacts and improved heat dissipation. **Mounting:** Easily replace other brands: VT2LN, VT1, VT02 and VT3 have ⅜-32 thd. bushing; VT8 and VT20, 4-hole bolt mount; VT4, 3-hole bolt mount convertible to 4-hole with adapter plate.

Enclosed Types: Gray wrinkle-finish cases. Units with suffix **B** have exposed terminal panel and mounting base; **E,** fixed type for table or panel mounting; **F,** portable with cord, outlet socket and fuse; **G,** deluxe portable with handle, circuit breaker and switch for overvoltage selection. Final suffix: **V** indicates with voltmeter; **VA,** voltammeter; **VW,** volt/wattmeter; all come with handle except VT8NF series. **Other Options:** All transformer types except the VT2LN offer shafts, extendable from either brush or base side; ganged versions have thru-shaft with same flexibility. Types with final suffix **C** come with 3-conductor input and output with one grounded to case.

*Minimum; max. of 400 cps for all models. †Use also at 50 cps if connected at no overvoltage output. ‡With 120 V input tap at which the max. current output rating applies up to 120 volts, but reduces approx. 50% at max. output voltage shown. In tandem units, the use of low voltage inputs would halve the rated input and output voltages. §User wires for desired output; dial normally calibrated for overvoltage. #Factory-connected for overvoltage output; easily re-connected by user for no overvoltage. •Switch selects overvoltage or no overvoltage. ^5¾" including handle. ▪Case height only, excluding handle. ♦Depth behind panel; add 1" for knob thickness for VT8 types; 1/8", VT02 or VT4 types; 1¼" for VT20 types. THREE-PHASE, THREE-IN-TANDEM ASSEMBLIES

Normally wired for Y-connection. Standard CW dial 240/280 volts except VT02 types where 240/264 V dial is supplied, and VT8H-3, where 480/560 volt dial is standard. Other dials available as listed elsewhere on these pages.

*Minimum; max. of 400 cps for all models. †Use also at 50 cps if connected at no overvoltage output. ‡With 120 V input tap at which the max. current output rating applies up to 120 volts, but reduces approx. 50% at max. output voltage shown. In tandem units, the use of low voltage inputs would halve the rated input and output voltages. ♦Depth behind panel; add 1" for knob thickness for VT8 types; 7/8", VT02 or VT4 types; 1 1/4" for VT20 types. ‡For mounting bracket, add 1 1/4" w. x 1/16" d. **Must not be connected for over-voltage. ††Includes knob, dial and hardware.

METHOD OF DETERMINING SECONDARY CURRENT RATING

Since our transformers may be used in many possible configurations, the current shown is rms secondary winding current. Secondary current ratings are rms ac values, NOT dc values. When selecting the "Secondary Amp" rating, the conversion chart at the right should be used.

RECTIFIER TYPE	FILTER TYPE	SECONDARY CURRENT

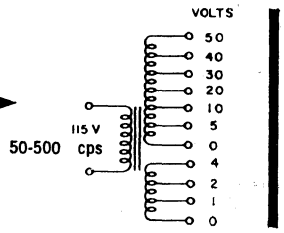
MULTI-VOLT 1 to 54 VOLTS in 1 VOLT STEPS



MV (multi-voltage) secondaries may be series connected for any output from 1 to 54 volts, in 1 volt steps, at rated current. This is accomplished by using the small buck-boost secondary.

HIGH CURRENT CHOKES

HIGH CURRENT CHOKES

Signal's line of High Current Chokes is the most extensive available. It is designed to complement the selection of High Current Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full rated DC current. All resistance ratings are maximum values.

Special variations or intermediate values of Inductance, current, or resistance can be supplied promptly and accurately.

INDUCTANCE VARIATION WITH DC CURRENT

The curve shown applies to the whole line of chokes. It allows the user to determine the value of inductance which will be obtained at intermediate and overload values of DC current. The values on the curve are stated in generalized coordinates of % inductance versus % DC current.

For example, the CH-100 at 50 amperes (50% DC Current) will have an inductance of 0.75 MHY (150% of rating), the CH-25 at 31 amperes (125% DC current) will have an inductance of 3.5 MHY (70% of rating).

It is not recommended that chokes be used at over 100% of rated current since temperature rise will then be excessive. However, if load current is intermittent, and RMS current is less than maximum rated current, it is permissible.

Special "swinging chokes" can be supplied where the slope of this characteristic is emphasized. Specify minimum inductance required at two current values (usually maximum and minimum current) and we will furnish prompt quotations.

At higher power loads (above 2-3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher conversion efficiency and lighter power line drain of 3 phase systems.

Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

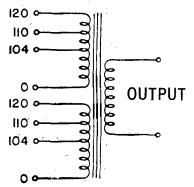
As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.



NEW DESIGN AND CONSTRUCTION

SMALLER • LIGHTER • MORE EFFICIENT

GRAIN-ORIENTED STEEL CORE

These cores permit the use of higher peak flux densities for the same core loss. This results in a lower number of turns required and therefore, a smaller, more compact transformer.

STRIP-WOUND SECONDARIES

At the heavy current used in this line it becomes practical and desirable to use wide copper strip (as wide as the coil itself) for windings. Besides the obvious advantages of excellent winding space factor, the heat dissipation of the coil is improved. This improvement is due to the fact that the heat generated in the windings has a pure copper path to the coil ends, where it can be dissipated. In conventional windings of many turns per layer this heat flow is impeded by wire insulation and air spaces between turns. Therefore, the use of copper strip windings yields a dramatic reduction in size and weight.

CLASS F INSULATION USED THROUGHOUT

Class F insulation is rated for unlimited life at a total temperature of 155°C (ambient plus temperature rise).

Class A insulation has a maximum temperature rating of 105°C. The "nominal" current ratings given to this series are for a temperature rise of 45°C above 55°C ambient (Class A). Since Class F insulation is used it is permissible to increase these ratings by 40% (700 and 1400 amperes) without reducing the reliability of the transformer. The temperature rise will be 100°C over a 55°C ambient. The only limitation is not the transformer, but the temperature rating of surrounding components which may be affected by the additional heat radiated by the transformer.

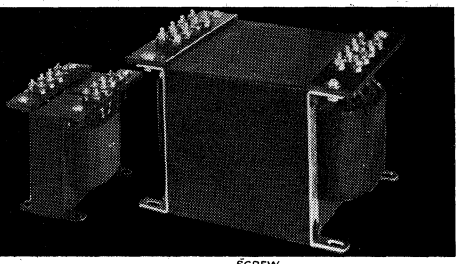
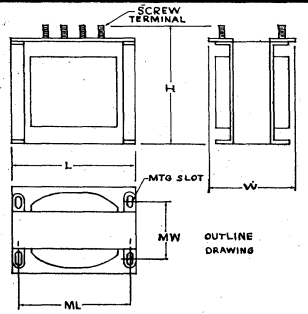
HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS



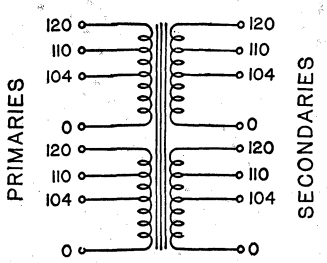
AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "UP" lines are designed for a maximum of 55°C rise above ambient, for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers. Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings.



"DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec.



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is **doubled.**

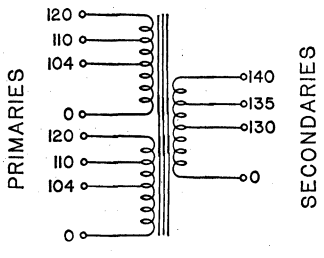
"UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec.



The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts.
This type is quite useful to boost low line voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

SIGNALS CUSTOM SERVICE

Many of our customers do not realize that the major portion of our shipments consists of "special" or "custom" items.

Usually, the final application of one of our stock transformers does not require the full number of taps or windings provided. These naturally are part of the cost of the item. If we are advised as to the specific taps used or as to what intermediate voltage or current is required we can begin production quickly on this variation of our stock item. If we define production quantities as roughly over 50 pieces, the customer will do better price-wise on his custom made item than on the standard.

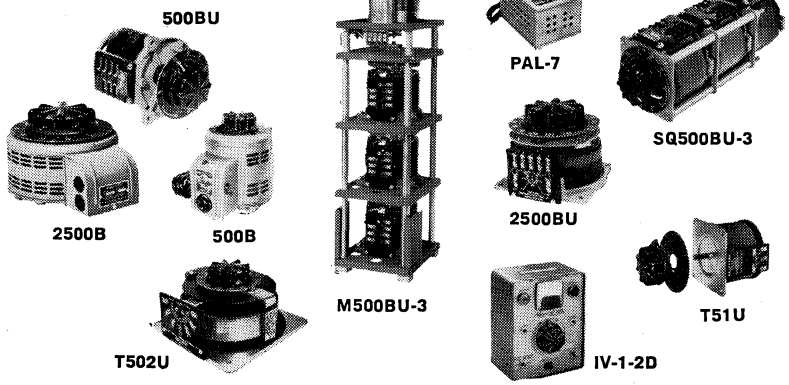
Adjust-A-Volt® VARIABLE AUTO-TRANSFORMERS



Industries widest selection of adjustable variable auto-transformers designed to deliver variable output voltages with high efficiency, reliability and minimum maintenance. Ratings from .165 to 265 KVA. Bench and panel mounting. Manual or motor driven. Single or ganged assemblies. Military designs, specials, 36 volt types. All Adjust-A-Volts feature zero wave form distortion with high voltage resolution, and regulation with conservative ratings. Design features rugged mechanical construction and precious metal-plated commutators.

Brush design provides smooth flow of input current and voltage and ease of brush replacement which is seldom required. All Adjust-A-Volts operate on 50/60 cycle current except certain SQ models which are 60 cycle*. Operation is permissible at 50% of rated power output. Bench models are housed in grey wrinkle painted die-cast aluminum cases equipped with pilot light, switch, line cord, and an output receptacle. Write for complete catalog.

CV Transformers

AUTOMATIC, INSTANTANEOUS VOLTAGE REGULATION FOR A WIDE VARIETY OF ELECTRIC AND ELECTRONIC DEVICES

Constant-voltage Sola transformers provide a stabilized output voltage even though the input voltage varies over a considerable range. Their applications are numerous and varied. CV's are especially ideal for high-accuracy requirements such as in computers and data-processing equipment.

Another advantage in CV transformers is their ability to prolong the life of electronic components by eliminating injurious over- and under-voltages. The Sola transformer's current-limiting factor protects semiconductors and other components from excessive inrush and fault currents.

Letter following a catalog number designates units which may be converted to cord input and receptacle output. See Adapter Kit table on page 1425.

Outline dimensions are the overall outside dimensions of the unit, not including separate capacitor where employed. Dimensions are subject to manufacturing tolerances of ±1/32 to ±1/8 inch.

Electronic-Power Types

± 1% REGULATION FOR FILAMENT TYPE,
± 3% FOR PLATE-FILAMENT TYPE

The electronic-power type of Sola transformer is designed as a component for simple assembly into many kinds of electronic equipment. The filament type (CVF) provides 6.0 or 6.3 volts of output regulated within ± 1% over line variations of ± 15%; the combination plate-and-filament type (CVE) regulates within ± 3%.

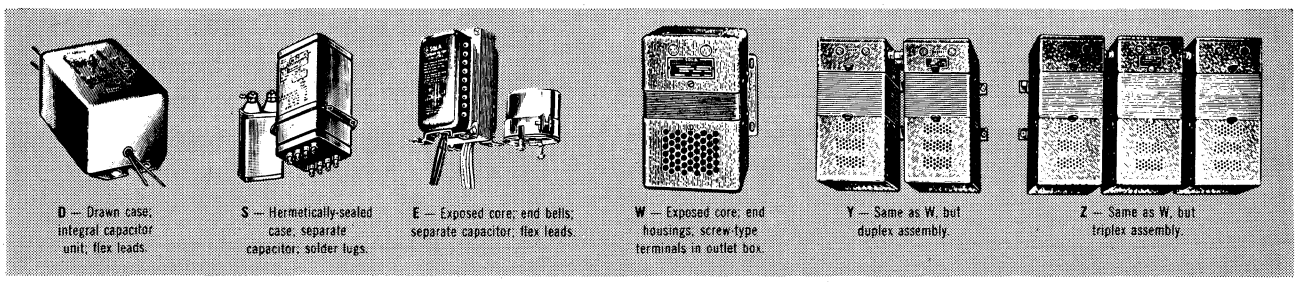
"STRUCTURE CODE" LETTER REFERS TO ONE OF THESE GENERAL TYPES OF MECHANICAL ASSEMBLIES:



D — Drawn case; integral capacitor unit; flex leads.
S — Hermetically-sealed case; separate capacitor; solder lugs.
E — Exposed core; end bells; separate capacitor; flex leads.
W — Exposed core; end housings; screw-type terminals in outlet box.
Y — Same as W, but duplex assembly.
Z — Same as W, but triplex assembly.

Cord/Receptacle Adapter Kits

Adapter kits may be used when the convenience of input plug and output receptacle is preferred to the standard arrangement of terminals in the transformer housing. See accompanying chart.

STANCOR OUTPUT TRANSFORMER CHART

audio transformers

A simplified selection of the proper transformer for use as a replacement in radio receivers or in the construction of audio amplifiers. **To use this chart,** check the first column for the tube being used, then read across for the applicable operating characteristics and correct Stancor transformer. In most cases, two Stancor part numbers are indicated in order to give a choice of Mounting styles.

STANCOR-WILLIAMSON ULTRA-LINEAR HIGH FIDELITY AMPLIFIER

Has had wide acceptance due to its fine perfomance characteristics and ease of assembly.

Power output — 25 watts with less than 1% total Harmonic distortion and negligible intermodulation distortion. Frequency response — flat from 20 cycles to 40KC. Write for Bulletin 479 for complete Parts List, schematic and performance curves.

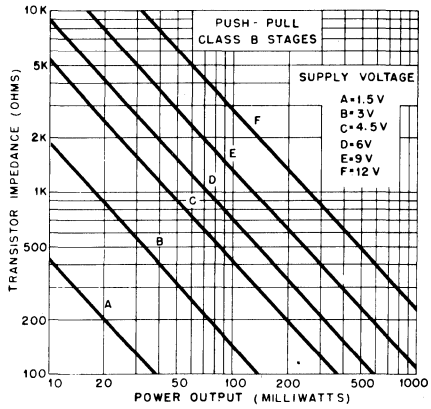
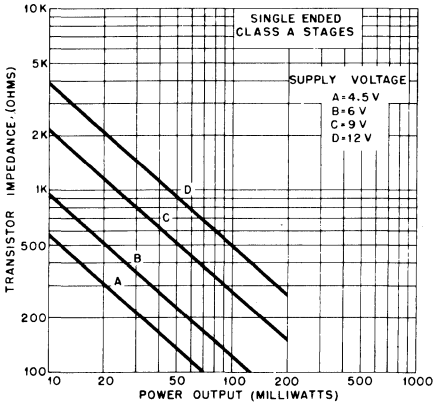
Transistor Impedance Characteristic Curves





ULTRA MINIATURE

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power.

These transformers are designed primarily for transistor audio applications but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations.

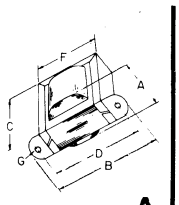
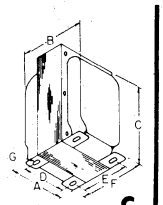
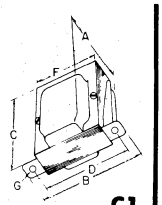
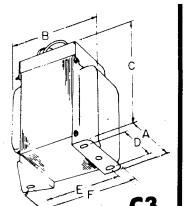
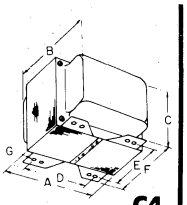
power transformers

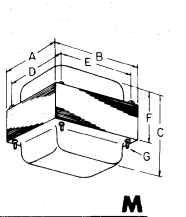












Stancor's broad line of commercial grade power transformers offers a choice of standard mounting styles. Listings are in ascending order of plate-supply voltage for ease of selection.

All units are designed and built to meet the exacting requirements of EIA for electrical tolerances, dielectric strength, temperature rise and construction. All are insulated with class A materials; (105°C max. operating temperature).

Transformers designed for full-wave C.T. rectification with capacitor input filter may be used with choke input filter allowing an increase in D.C. current of 30%.

Transformers designed for full-wave C.T. rectification with choke input filter may be used with capacitor input filter requiring a decrease in D.C. current of 25%.

Note: Filtering shown permits maximum output ripple voltage of 3% or less.

★Quantity Shown is Total Number used in a given circuit. Rectifiers should be equivalent to Sarkes Tarzian numbers shown.

*Surge protection resistors are recommended when capacitor input filters are used. Allow 3.3 ohms per 70 volts R.M.S. applied voltage. Transformer secondary winding D.C. resistance may be used as part or all of the amount required.

SILICON OR SELENIUM RECTIFIER TRANSFORMERS:

Primary — 117 Volts 50/60 Cycles.
Solder Lug Termination

These transformers have been designed to operate in full-wave center tap or bridge rectifier circuits. The D.C. voltages shown are approximate since they depend on the internal drop of the rectifiers used.

Primary taps and an additional buck or boost tapped winding provides a wide range of output voltages. For detailed terminal connections, output voltages, etc. write for bulletin 518-R. For matching high current chokes see page 20.

POLYCHROMATRANS With Multiples of 0.1" Grid Spacing for Printed Circuits.

COLOR CODING by application to assure immediate and positive transformer identification.

RECTANGULAR SHAPE allows the utmost utilization of space and stacking in limited area.

PROTECTIVE STAND-OFF prevents solder flow-back and maximum lead exit protection.

SPACED LEADS of fatigue resistant gold plated nickel-iron alloy are .020" in diameter, 9/16" long and have multiples of 0.1" grid spacing for printed circuit application.

SPRAGUE PULSE TRANSFORMERS AND DECADE INDUCTORS

Type 11Z

TRIGATE* PULSE TRANSFORMERS

FOR LOW-COST SCR CIRCUIT APPLICATIONS

- Specifically Designed For Commercial and Industrial SCR Triggering Applications Where Low Cost and Excellent Performance Are Required
- Balanced Pulse Characteristics and Energy Transfer Between Windings
- Minimum Saturation Effect To Allow Operation Where Increased Pulse Widths Are Required
- Fast Pulse Rise Time and Increased Current Capability To Prevent SCR di/dt Failure
- Operating Temperature Range of −10 C to +70 C
- For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin 40003
- Call Your Sprague Industrial Distributor For Current Quantity Prices

TYPE 850W PRECISION DECADE INDUCTORS

- Indispensable For Design and Experimental Work on Audio Filters, Equalizers, and Tuned Circuits. Frequency Range is 150 to 20,000 Cycles per Second
- Excellent Stability With Respect to Current and Ambient Temperature Changes
- All Four Decade Inductors May Be Connected in Series to Provide 11,110 Steps of Inductance
- Housed in Blue Aluminum Case with Sloping Front to Facilitate Bench-Top Readings. Measures 3" Wide, 2½" High, 5½" Long. Fitted with Five-way Binding Posts.
- For Complete Technical Data, Refer to Latest Issue of Engineering Bulletin 90,500.

STERLING TRANSFORMER

UNIVERSAL DC POWER MODULE TRANSFORMERS

High reliability transformers having a tapped primary and single or dual secondary windings which may be connected F.W. bridge or F.W. center tap so as to obtain a wide range of DC voltages and current ratings.

STERLING TRANSFORMER

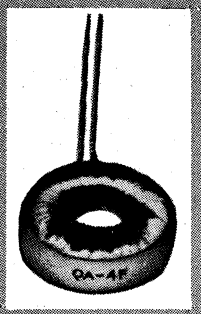
hi-Q toroidal inductors

MANUFACTURED TO MIL-T-27A. ALL HERMETICALLY SEALED UNITS (STYLE H) ARE MIL TYPE TF4RX20YY

- ALL MOLDED UNITS STYLE M ARE MIL TYPE TF5RX20ZZ
- ALSO TOROIDAL INDUCTORS IN OTHER SIZES AND VALUES AVAILABLE ON SPECIAL ORDER.
- MOLYBDENUM PERMALLOY POWDER CORES USED IN ALL UNITS.



STYLE F
* ALL INDUCTORS SHOWN AVAILABLE IN OPEN STYLE F.

QA SERIES

FREQUENCY TO 20KC•ACCURACY ± 1%

The QA series is designed to optimize small size and high "Q" for miniaturized applications. These units are available on special order with stabilized cores and inductance from 1MH to 4.0H.

QD SERIES

FREQUENCY TO 10KC•ACCURACY ± 1%

The QD series is designed for very high "Q" in the audio band allowing for application in sharp frequency filters with high power levels and low losses. They are excellent for tuned transformers and oscillators. Available on special order with stabilized cores and inductance to 50H.

STERLING TRANSFORMER CORP

POWERSTAT® *Variable Transformers now*

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

STATIONARY METERED KNOB TYPES

Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with metered knobs. Stationary voltmeter does not turn with knob. Voltmeter accurate within ±2.5% of full scale and insensitive to stray magnetic fields. When ordering, add VS prefix to type number. *Back-of-panel* mounted types in the 21-22 through 146-246 series can be combined with Metered Knob Assemblies. Existing models can be retrofitted also. Assembly type VS150 has a 0-150 volt scale and type VS300 has 0-300.

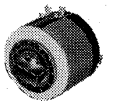
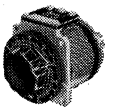
*PATENT PENDING

40-VOLT SERIES

Meet high current, low voltage requirements of low voltage power supplies and a wide range of transistor circuit applications. Manually-operated and motor-driven single, 2- and 3-gang single phase types available.



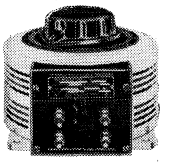
TYPE 10B-40

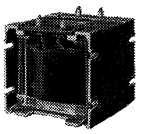


TYPE 21-40

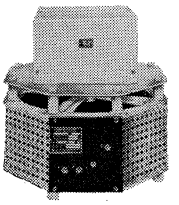
LINE CORRECTORS

Used to correct line voltage variations to maintain a constant output voltage or to supply a limited range of output voltage from a stable a-c source. Manually operated and motor-driven types available.





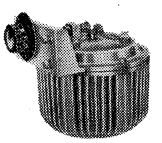
TYPE LC2106D



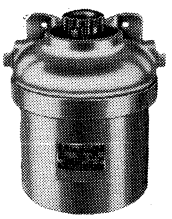
TYPE 5MLC2115E

OIL-COOLED AND EXPLOSION-PROOF

Oil-cooled units substantially increase ratings above equivalent air-cooled types and provide a measure of safety. Explosion-proof models are Underwriters' Laboratories listed for Class 1, Group D service. Both are manually operated only.



OIL-COOLED
TYPE 0-116B



EXPLOSION-PROOF
TYPE X-116

LW136B SERIES

Have three windings. Connections can be made for operation as a source of adjustable low output voltage, a line voltage corrector or a limited range variable transformer. Manually operated and motor-driven, open and enclosed construction types available. Full connections and ratings on request.

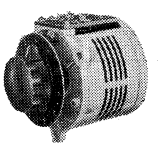
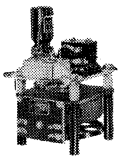
HIGH FREQUENCY POWERSTAT® VARIABLE TRANSFORMERS

TYPE 5-1011



TYPE 1HMD07CKI



TYPE AM1HMS07U

Standard types designed to meet applicable military specifications are available: manually operated and motor-driven types for 28, 120, 240 and 480 volt, 400/800 cycle single and three phase operation in ratings from 56 VA to 8.7 KVA; manually operated types for 115 volt, 400/800 cycle single phase service with outputs of 0-28 volts, 2.5, 5 or 8 amperes and 0-5 volts, 6 or 12 amperes; manually operated types for 400/1600 cycle service as limited range variable transformers, low voltage output variable transformers or line correctors.

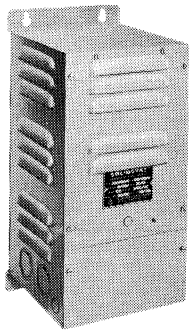
SOLIDSTAT® Variable Voltage Controls



TYPE CSR106

- SOLID-STATE VOLTAGE CONTROL
- 6, 12 AND 24 KVA MODELS
- 120, 240 AND 480 VOLT TYPES

Solid-state, semiconductor variable a-c voltage controls for all loads from unity power factor to zero power factor lagging inductive load. Operating on a closed-loop, error-detector principle, they can be controlled by a potentiometer, by a current feedback sensing circuit or by a voltage sensing circuit. Any load from zero up to the full rating can be controlled with an efficiency of 98% or higher. Have unique lock-out overload protection circuit. Provide instantaneous response and are insensitive to line or load voltage changes.

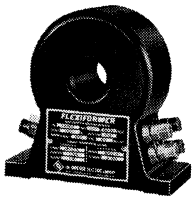
FLEXIFORMER® Packaged Transformer Primaries

● A SOURCE OF A-C VOLTAGE ● A CURRENT TRANSFORMER ● 150 VA AND 1000 VA TYPES



TYPE TP150

These "do-it-yourself" transformers are essentially self-contained toroidal primary coils encased in durable high impact plastic. Colored SUPERIOR 5-WAY Binding Posts for connections are integrally mounted. When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding is shunted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. Can be used as portable units or permanently mounted. Request free copy of "Experiments Using FLEXIFORMER Packaged Transformer Primary."

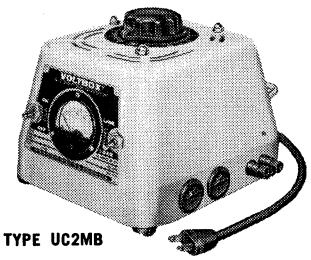
VOLTBOX® A-C Power Supply



TYPE UC2MB

Compact versatile instrument containing all the necessary components for tests involving a-c voltage: POWERSTAT Variable Transformer, direct reading voltmeter, three output receptacles; two SUPERIOR 5-WAY Binding Posts, "on-off" switch, line-load meter switches, fuse and 6-foot cord-plug. Designed for 50/60 cycle service. Type UC1MB ratings are 120 volt input and 0-140 volt, 10 ampere, 1.4 KVA output; type UC2MB ratings are 240 volt input and 0-280 volt, 3.5 ampere, 0.98 KVA output. Other types available on special order.

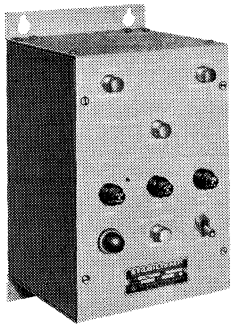
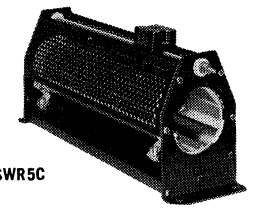
STABILTEMP® Proportioning Temperature Coupler



TYPE PTC5

Maintains voltage needed to keep electric furnaces and ovens at correct temperature when incorporated into systems using commercially available current proportioning temperature controllers. Use with cataloged motor-driven 120 or 240 volt, 50/60 cycle single phase POWERSTAT Variable Transformers. Voltage is regulated at any point within the range of the POWERSTAT as determined by the controller current command signal regardless of variations in line voltage or load current. Type PTC5 rated for 5 milliampere maximum command signal; user provides resistors for 20 or 50 milliampere signals.

OHMSTAT™ Slidewire Resistors



TYPE SWR5C

Feature unbreakable, high-temperature coated, split aluminum tube with stainless steel spring expansion compensator. Operates at peak rating with no slackening of wire turns. Excellent heat conducting properties of aluminum prevent "hot spots." Slider bar is chrome-plated brass; double sliding contact provides reliable connection with resistance wire. Negligible inductance through 400 cycles. Screened for user protection. Baseplate shields mounting surface.

This series of high current transformers and chokes are most widely used for high power rectifier and high current A.C. applications. It is one of the industries most popular items. All types are designed for a nominal temperature rise of 45°C at full load and will easily withstand unusual overloads. The regulation is extremely low, varying from 5% on the smallest unit to 1% on the largest. All units have name plates and wiring diagrams for installation ease, future reference and permanent identification.

Five constructional types are available for maximum flexibility for use in either the laboratory or production.

HORIZONTAL BRACKET MOUNT (STYLE B) is an "open" unit, double vacuum varnish impregnated to insure long life and give maximum protection against humidity.

EPOXY UNITS (STYLE BE) are electrically and mechanically identical to style B and are vacuum encapsulated to withstand environmental conditions per MIL-T-27B, Grade 5, Class S.

SHELL ENCLOSED (STYLE V) offers excellent mechanical protection to the coil. This is in addition to functional appearance and the ease of "wiring with leads." Double vacuum varnish impregnation further assures adequate moisture protection and long life.

CAN ENCLOSED (STYLE C) units are ruggedly constructed and embedded in a rigid potting compound to insure maximum heat transfer. Professional Todd finish enhances any chassis.

HERMETICALLY SEALED (STYLE CM) units are manufactured to MIL-T-27B, Grade 4, Class S to withstand the most rigorous environmental conditions.

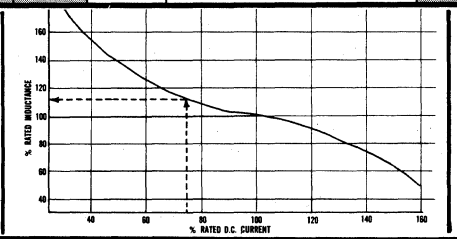
MILLIHENRIES — AMPS — OHMS



TODD ELECTRIC HIGH CURRENT CHOKES are the perfect companion to our High Current Transformers when utilizing inductive filtering in designing a power supply.

INDUCTANCE VARIATION

The inductance realized from any stock High Current Choke will vary from the nominal rated values as shown by the graph when subjected to a non-rated current. Steady state current of over 115% is not recommended due to its greater heating loss but may be used for intermittent operation.

Triad J Series offers flexibility enabling your amplifiers to exceed broadcast standards. Although economy in construction has cut costs, these transformers approach and closely approximate performance characteristics found in more costly hermetically sealed parts. Single hole mounting provides for rotation for maximum reduction of hum . . . alloy shielding gives you 40-60 db hum reduction (60-80 db in Types A-11J & A-12J) . . . you can obtain wide frequency ranges . . . flexible leads facilitate ease in mounting . . . input units are electrostatically and magnetically shielded . . . light weight and encased in Triad's satin smooth baked gray enamel cases, 1⅜" diameter, 1¾" above chassis . . . legible circuit diagrams are permanently affixed to every case.

Triad Replacement Output Transformers furnish a wide range of size and mounting characteristics . . . specifically engineered for mounting in precise location in chassis. Climatite treated . . . manufactured to exacting quality standards of more costly types . . . progressively designed for advanced circuitry and audio tubes . . . total complete coverage over impedance and wattage ranges . . . Triad units provide finest response in minimum space . . . and outlive all others.

CHOPPER INPUT TRANSFORMERS

Triad Chopper Input Transformers provide exceedingly close balance between the two halves of the primary winding . . . minimum noise in microvolt ranges of input signals is assured with Triad's special core treatment techniques. For demanding transistor and tube applications, Triad's special design capabilities have an outstanding record. For special applications, consult Triad.

Sub-miniature Encapsulated TOROIDAL INDUCTORS

Triad sub-miniature toroidal inductors, designed for quick, easy printed-circuit board mounting, are now stocked for immediate delivery in a range of standard ratings from 50 micro-henries to 500 milli-henries. Many uses, especially in airborne telemetering applications incorporating Triad's sub-miniature filters FL-384 through FL-388. Case size of units is 7/16 inch diameter by 1/4 inch high. Providing an optimum combination of high Q and extremely small-size, this series is ideal for printed board, transistor or vacuum tube application.

Triad sub-miniature inductors are toroidally wound on permalloy powdered cores. Encapsulated in high temperature epoxy resin. Weldable or solderable leads of gold plated nickel alloy. Highly resistant to severe acceleration, shock or vibration. Manufactured to MIL-T-27A, Grade 5 Class S (MIL type TF5SX20ZZ).

NOTE: Ma. DC maximum is for approximately 5% drop in inductance. Those figures marked * will give less than 5% inductance drop but should not be exceeded under operating conditions.

Inductance tolerance of EX-P05A through EX-P50A is ±5%; EX-001A through EX-500A is ±2%.

Encased-Transistor Transformers

INCLUDES: (A) INPUT, (J) INTERSTAGE, (L) LINE TO TRANSISTOR, (S) OUTPUT.

The high performance characteristics such as frequency response, high permeability lamination, and low insertion losses equal those of the more costly hermetically sealed units. The mounting type of the units appearing in the second column under "Part No." are as listed in the last column on the page, while the otherwise identical units listed in the first column are mounted by means of an octal plug-in socket.

Miniature Transformers

INCLUDES: (A) INPUT, (J) INTERSTAGE, (S) OUTPUT, (C) REACTOR, (L) LINE TO LINE.

The most complete line of top efficiency miniature transformers ever made available. These Miniature transformers are designed for a wide range of civilian and goverment applications. Used by many manufacturers of hearing aids and a variety of miniature electronic devices where maximum efficiency is necessary. Ideally suited for installation in original equipment and for replacement.

Inverters-DC to AC

Recent developments in the power transistor field have made possible the design or circuits which are efficient and rugged converters of low voltage DC to high voltage AC or DC power. These transistorized power supplies are ideally suited for powering all kinds of battery operated equipment such as mobile communication systems, aircraft and marine navigational systems, photoflash, ultrasonic applications and even 117V 60CPS from an automobile battery so as to operate 117V radio, television, electric shavers, etc. These transistor power supply transformers give a wide range of voltage and power to choose from. Complete instructions supplied with each transformer.

Blocking Oscillator-Converters

Designed specifically for use in single transistor blocking oscillator circuits. The DC output voltage of TR 464 is rated for a quadruple rectifier circuit and may vary some from these ratings due to bias and component value. All other DC voltage ratings are with 1/2 wave single capacitor input filter.

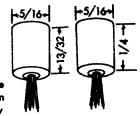
Miniature Transistor Transformers



RAV 6 RAV 4

INCLUDES: (A) INPUT, (J) INTERSTAGE, (D) DRIVER, (M) MIXING OR MATCHING, (P) HAS PULSE APPLICATIONS, (S) OUTPUT.

Designed and built to meet MIL-T-27B Grade 4, Class R specifications. Ruggedly constructed, these units have exceptional reliability along with the highest ratings available today for their size. They can be used for different impedances than specified, the impedance ratio being constant. Useable frequency range is 100 cycles to 20,000 cycles. The dimensions shown in the RAV-6 drawing are optimum.

Miniature Transistor Transformers

RAV 5

INCLUDES: (A) INPUT, (J) INTERSTAGE, (D) DRIVER, (S) OUTPUT, (M) MIXING OR MATCHING, (P) HAS PULSE APPLICATIONS.

Designed and built to meet MIL-T-27B Grade 4, Class R specifications. The same rugged construction used in the manufacture of the units on the preceding page has been followed and these units have been reduced in height by almost 40%. They can be used for different impedances than specified, the impedance ratio being constant. Useable frequency range is 200 to 20,000 Cycles. The dimensions shown in the RAV-4 drawing are optimum.

MIT 295		High Permeability cover and shield providing 25 to 30 DB shielding						

Designed and built to meet MIL-T-27B Grade 4, Class R specifications. Rugged construction, exceptional reliability, high power rating — all have been maintained in the design of these units. Provided with non-insulated .017 diameter, 1 1/4" long, gold plated lead wire, these units may be welded or soldered in the circuitry. Standardized with the semiconductor industry, the leads are spaced on a .2" diameter circle. These units can be used for different impedances than shown, the impedance ratio being constant. Useable frequency range is 200 to 20,000 Cycles. The dimensions shown in the RAV-5 drawing are optimum.

Input-Interstage-Driver

INCLUDES: TRANSISTOR AND TUBE TYPE — MOLDED AND ENCASED

Designed and built to meet all the requirements of MIL-T-27B specifications for their specified class of operations. Listed in order of the primary impedance — this complete list of Input-Interstage & Driver Transformers makes available an almost endless variety of high quality-miniature and compact audio transformers. Both Transistor (Tr.) and tube type transformers may be used at slightly different impedances than specified, the impedance ratio being constant. The dimensions shown in the RAV-4, RAV-5, and RAV-6 drawings are optimum.

Output

INCLUDES: TRANSISTOR AND TUBE TYPE — MOLDED AND ENCASED

Designed and built to meet all the requirements of MIL-T-27B specifications for their specified class of operation. Listed in order of the primary impedance— this complete list of output transformers makes available under one listing a wide variety of high quality output transformers for both transistor and tube type circuitry.

Chokes

Designed and built to meet MIL-T-27B specifications. These units provide the maximum inductance at the given current rating in a minimum size. All AJ, FA, GA, etc. case sizes are identical to MIL-T-27B specifications

Audio Inductors

Designed and built to provide a full range of inductance and current ratings in epoxy molded, encased, and encapsulated units from .06 Hy. to 450 Hy. at tolerances of less than ± 5%. Units marked * have a tolerance ± 3% and a Q of 22 or more at approximately 1,000 cycles. Units marked # have an inductance tolerance of ± 2% and a Q of 25 or more at 1,700 cycles for low inductance units and 400 cycles for high inductance units. Stable operation is provided from .1 to 30 volts and over the full MIL temperature range.

Alignaire Inductors - Variable

These Alignaire Inductors are ideally suited for hard to align or frequently changed circuits such as low frequency oscillators, attenuators, low frequency tuned amplifiers, filters and delay lines. The high frequency and temperature stability built into these units make them most applicable to mid-audio tuned frequency circuits.

Provided in a wide range of inductance values, these units require only a simple screw driver adjustment to achieve the exact inductance required for the circuit. Less than three turns of the alignment screw are necessary to move the internal piston through its complete range.

Internal construction of the AL-3 units is similar to the AL-1 and AL-2 but have an allen alignment screw on the side of the case.

PRIMARY 117 VOLTS 50/60 CYCLES

These units have been designed and built to all requirements of MIL-T-27B for their specific class of operation. All EB, GA, GB, etc. case sizes are identical to MIL-T-27B specifications. These units meet the requirements for circuit and mobile communications, control equipment, guided missile controls as well as marine equipment and any field where maximum sealing quality is a prime requisite.

PRIMARY 105/115/125 VOLTS 380-1,000 CYCLES

These transformers have been designed to meet all requirements of MIL-T-27B for their specific class of operation. All EB, GA, GB, etc. case sizes are identical to MIL-T-27B specifications. These units meet the rigid requirements for aircraft and mobile communication, control equipment, ballistic and guided missile control, marine equipment, as well as any field where maximum sealing quality is a prime requisite.

Multi Shielded-Line Isolation

50/60 CYCLES

These Multi-shielded line isolation transformers have been specifically designed for critical circuitry where minimum coupling capacity is imperative and battery-type isolation is desired. 27V47, 27V48, 27V49 are vacuum potted with epoxy resin in standard MIL-T-27 cases and have less than .03 MMFD capacity coupling between windings. Other units in YY cases have coupling capacitance of less than .1 MMFD. 27V43 is for 400 cycle operation only.

Line Isolation Transformers

380 TO 1,500 CYCLES

These units have been designed and built to MIL-T-27B, Grade 4, Class R specifications. Applicable to communications, lighting, and equipment systems requiring isolation. All units are static shielded.

▲ Multi-shielded; Less than .1 MMFD coupling between windings.

Step Down Transformers

THREE PHASE — 400 CYCLES

These transformers are designed primarily for airborne communication and control equipment. 27V17 and 27V18 are YY connected 400 cycle, three-phase, Primary - 115 volts per phase. 27V80 is delta-delta connected, Primary - 200 volts per phase.

Band Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specific class of operation and are high performance units applicable to production or laboratory communication and electronic equipment. They have been carefully adjusted to the specified frequencies with proper input and output impedances.
Output impedances indicated as "To Grid" should be terminated in a open grid circuit. Tapped outputs — marked (*) — provide for either 10,000 ohm transistor termination or high impedance grid termination.

Telemetering Band Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specific class of operation. The Steel Jacket filters in YY cases are designed with 4 pin plug-in type terminals and the Molded (ZZ) units have straight wire terminals. Twenty-three separate channels are provided with a choice of either Molded or Steel jacket case types.

Band Pass Filters — 400 Cycle Power Filters

These Power filters eliminate harmonic distortion and interference caused by generator loading or external influences. Designed and built to meet all requirements of MIL-F-18327B Grade 4, Class R, these units are ideally suited for airborne or mobile application.

Part No.	MIL-F-18327B Classification	Band Pass Filter Description
27C446	FR4RX22LB	The output of the 27C446 is 115 Volts, 13 Watts at c frequency of 375 to 425 Cycles (Within ±1DB). Attenuation at other frequencies include: 30DB at 60 Cycles, 20DB at 120 Cycles, 14DB at 800 Cycles, and 44DB at 1,200 Cycles and above. This unit operates from any 115 Volt — 400 Cycle source.

Low Pass Filters — 400 Cycle Power Filters

Part No.	MIL-F-18327B Classification	Low Pass Filter Description
27C445	FR4RX11NB	The output of the 27C445 is 115 Volts, 26 Watts at a frequency of 375 to 425 Cycles (Within ±1DB). Attenuation of the second harmonic (800 Cycles) is 30DB and is 50DB at the third harmonic (1,200 Cycles) and above. The filter operates from any 115 Volt — 400 Cycle source.

Low Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specified class of operation. These low pass filters may be connected in conjunction with the high pass filters below to obtain almost any band pass desired. Attenuation is less than 6DB at the cut off frequency and is 40DB at approximately 1.6 of FC as shown.

High Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specified class of operation and are high performance units applicable to production or laboratory communications and electronic equipment. These high pass filters are carefully adjusted to specified frequencies with the proper terminating input and output loads. Attenuation is less than 6DB at the cut off frequency and is 40DB at approximately .6 to .63 of Fc as shown.

MIL-T-27B Low Frequency High Q Inductors

These inductors have been designed and built to meet the requirements of MIL-T-27B for their specific class of operation. Constructed with only the highest grade materials these units have magnetic shielding as well as humbucking construction. Designed to a Q of 40 or more on frequencies ranging from 60 to 300 cycles. Split winding termination permits series, parallel or series center tap connections, such as might be used in filters, tuned circuits or coupling inductors.

Pulse Transformers — DESIGNED AND BUILT TO MEET MIL-T-21038B

Tube Type

When used as coupling transformers this group of units have the following additional parameters: Overshoot ranges from 5 to 30 micro-seconds with the lower overshoot at the higher pulse widths; Output voltages of 15 to 25 volts may be expected with a normal droop of 10 to 15 %; Blocking oscillator overshoots are held to less than 2%.

Pulse Transformers — DESIGNED AND BUILT TO MEET MIL-T-21038B

Transistor Type

Additional parameters for these transistor type pulse transformers are: 0% overshoots in almost all of these units, Output voltage of approximately 8 volts may be expected with no droop on units below .5 micro-seconds pulse width and approximately 15% droop on units above .5 micro-seconds pulse width. The average backswing will be 20-30% when connected in the transistor blocking oscillator circuit.

Hybrid Circuit Output

The circuit shown at the right is a typical "Patch" hybrid circuit using two 22S51 transformers.

This circuit is ideally suited for use in duplex radio communications where two way communication to and from a remote point is desired. It may also be adopted to operate sound distribution systems or speech amplifier and modulator for transmission from remote point. The output from a radio receiver may then be connected to the transformer marked T2 so that the received signal may be transmitted (through the 500 ohm line) to the remote point.

Molded And Plastic Coated Toroid Inductors

These high Q Toroid inductors have the highest inductive stability available to the industry. Each coil has an inductance tolerance of plus or minus 2%. Available in either plastic coated units with leads (TOR 800 and TOR 900 series) or in epoxy molded MIL-T-27B encapsulation (TOR 700 and TOR 7100 and up).

Encased Shielded Toroid Inductors

These high grade toroid wound coils have been designed and built to meet MIL-T-278, TF4RX20YY specifications. They have excellent stability over a wide temperature and voltage range....low hum pickup....high Q....plus or minus 1% inductance tolerance.

Multi-Tapped-Low Voltage Rectifier

SELENIUM OR SILICON RECTIFIERS
PRIMARY 117 VOLT 50/60 CYCLES

Each Selenium Rectifier Transformer listed in this section has terminal numbering and winding arrangement as shown in schematics. Primary connections are made to terminals 1, 2, 3, 4, 5, 6 and 7. The winding connected to terminals 5, 6 and 7 is a separate isolated primary winding, designed for the purpose of extending the voltage range of the transformer. This is accomplished by connecting the winding in series aiding or in series bucking with terminals 2, 3 or 4. Two identical secondary windings are connected to terminals 8 and 9 and to 10 and 11. Complete connection data supplied with each unit.

WIRING DIAGRAMS AND INSTRUCTIONS are furnished with each unit. The 24 Volt and 32 Volt secondary leads have individual grommets for each stranded lead. All primary and 115 Volt secondary leads are brought out through a threaded pipe nipple for attaching conduit or a bushing.

APPLICATIONS:
small motors and pumps
oil burner controls
signaling systems
solenoids and relays
burglar alarms
heating elements
control systems
switchboards and panels
pilot lights
electrically operated valves for controlling the flow of gas or liquids

Multi-Purpose 1:1:1:1 Isolation Control

50/60 CYCLES

This series has four isolated windings with seven possible combinations: for step-up, step-down, and isolation applications in industrial, home or laboratory use. They are particulary well adapted to 220-volt line step-down to provide 115-volt power source to operate machine tools and other automated equipment.

Isolation Transformers

50/60 CYCLES

Isolation control transformers provide 115 Volts power or lighting within machine tools or other automated equipment from various line voltages from 115 Volts to 600 Volts. They also permit direct grounded lighting systems or control circuits independent of power distribution grounds for greater operator safety. For complete specifications of 400 Cycle isolation transformers refer to the green section of this catalog.

Autoformers

50/60 Cycles

These Autoformers provide a smaller and more economical method of changing from 115 to 220 or 220 to 115 Volts. They provide correct line voltages for machine tool control units such as sequence timers, solenoids and lighting systems.

Line Voltage Regulators-Autoformers-With Meter

These Line Voltage Regulators provide the correct voltage to radios, TV Sets, air conditioners, refrigerators, deep freezers, automatic washers and many other appliances, even with variation in line voltage of 65-75-90-100-115-130 or 145 volts. They are also useful in altering the 115 volt line above and below the line voltage. An output receptacle and volt meter are internally connected to the 115 volt tap. All units are supplied with 6 ft. line cord and plug. All units have GMV Type Mounting with Meters.

Dry Type - Distribution

INDOOR — SINGLE PHASE — DOUBLE WOUND — 50/60 CYCLES
D-1 MOUNTING.

DRY TYPE GENERAL PURPOSE TRANSFORMERS are supplied in either double winding isolation or single winding auto-transformer types for 50/60 CPS applications. Either type may be used single phase or connected in a group of three for three phase. All units are Class B insulation for 80°C rise except the units marked (§) Class A for 55°C rise.
CASE AND JUNCTION BOX. A stamped steel case encloses the entire coil assembly and presents an attractive appearance. The junction box is an integrated part of the case and provides easy access and wiring to the individually marked primary and secondary leads. Knock outs are provided on the junction box for attaching conduit or bushings.
WIRING DIAGRAMS AND INSTRUCTIONS are furnished with each unit. On the inside of the junction box cover, a decal shows the schematic diagram and ratings of each transformer.
APPLICATIONS
1. To provide 120 Volt Lighting or 120/240 Volt Power from 240-480-600 Volt distribution circuits.
2. To insulate or isolate lighting circuits from power circuits allowing the use of grounded or ungrounded circuits independent of power or other lighting circuit grounds.
3. The auto-transformers provide a smaller and more economical method of voltage changing. These auto-transformers may be used to obtain 120 Volts from a 240 Volt circuit, to establish a neutral ground from a 240 Volt circuit, or to balance the 120/240 Volt loading on a three phase line to obtain lower demand billing by the utility company.

Control Transformers - Machine Tool Type

MACHINE TOOL TYPE CONTROL TRANSFORMERS are double winding isolation type for 50/60 CPS applications. They feature rugged design, compactness, and low regulation at economical prices.
WIRING DIAGRAMS AND INSTRUCTIONS are furnished with each unit.
Screw terminals are provided to facilitate wiring connections.
APPLICATIONS
1. To provide 115 Volt Power or Lighting within machine tools or other equipment from 230/460 Volt power circuits.
2. To permit direct grounding lighting or control circuits independent of power distribution grounds for greater operator safety.

†† The C-6X is rated at 5H @ 65MADC @ 330 Ohms, while the 20C59 is rated at 7H @ 55MADC @ 200 Ohms. The inductance of the 20C59 will be approximately 6H at the 65MADC level.

††† The C-23X is rated at

§ The PHD-100 unit is in an MIL-YY case while the 27D34 is in an MIL-FA case.
§§ The PHO-80 unit is in an MIL-YY case while the 27S12 is in an MIL-JA case.
Δ Transistor Power Supply Transformers—Voltage and Power output ratings are the same; however, circuit details may differ slightly.
‡ Electrical and Mechanical differences exist between these units.
* Mounting dimensions for the competitor's unit are not the same as the T-M units.
# Universal output transformer-The impedance range of these transformers differ slightly.
§ The 24S56 has an additional 2 & 8 Ohm tap.
(a) The 20D80 has an additional 2:1 Turns Ratio Tap.
(b) The P-5000 is rated at 5 Volts CT @ 6 Amps. while the 21F04 is rated at 5 Volts CT @ 8 Amps. Mounting dimensions of the competitor's unit are not the same as the T-M unit.
(c) The P-6010 is rated at 5 Volts @ 3 Amps. while the 24R01 is rated at 5 Volts @ 2 Amps.
(d) The P-8150 is rated at 1550 Volts @ 1.5MADC - case mounting, while the 24R91 is rated at 1800 Volts @ 4MADC - GGV type mounting.
(e) The P-6119 is rated at 300-0-300 at 55MADC while the 22R02 is rated at 300-0-300 at 70MADC.
(f) The P-6166 is rated at 6.3 Volts @ 2.25 Amps. while the 22R24 is rated at 6.3 Volts @ 4.7 Amps. Mounting dimensions are not the same as the T-M unit.
(g) The P-6496 is rated at 12.6 Volts CT @ 2 Amps. while the 22R46 has 2 - 6.3 Volts @ 3 Amps. Windings, which may be connected in Series for 12.6 Volts CT @ 3 Amps. The 22R46 also has a 6 Volt DC Primary Tap.
(h) The 26R01 has a 5 Volt Tap on the 6.3 Volt damper winding.
(i) The P-8336 high voltage is rated at 117 Volts @ 280MADC while the 26R13 high voltage is rated at 140 Volts tapped @ 117 Volts @ 300MADC.
(k) The 26R33 has an additional high voltage tap and an additional 5 Volts @ 3 Amps. winding.
(m) The 20A04 has an additional 6 Ohm Tap.
(n) The A-4774 has a split center tapped secondary while the 20A19 has a secondary center tap but it is not split. A-4774 unit mounted in a vertical channel frame - T-M mounted in a horizontal channel frame but both units have the same mounting dimensions.
(p) The C-1227 has a DC Resistance of 350 Ohms while the 20C59 has a DC Resistance of 200 Ohms.
(r) The C-1277 is rated at 300 Ohms DC Resistance while the 20C59 has a DC Resistance of 200 Ohms.
(s) The C-1415 is rated at 75 Ohms and 7500 Volt test while the 25C46 is rated at 35 Ohms and 9000 Volt test. Mounting dimensions of the competitor's unit are not the same as the T-M unit.
(t) The P-6429 has one of its four secondary windings center tapped, the 21F24 has no center tapped winding.
(v) The P-3026 has an additional low voltage primary tap.
(w) The 24S01 has 2 additional voltage taps.
(x) The P-8334 is rated 6.3 Volts @ 8.5 Amps. while the 26R88 is rated at 6.3 Volts @ 6 Amps.
(y) The P-8338 is rated at 6.7 Volts @ 10 Amps. while the 26R93 has two 6.3 Volts @ 6 Amps. windings that may be connected in parallel to get 6.3 Volts @ 12 Amps. The 26R93 also has an additional 6.3 Volts @ 1 Amp. winding.
(z) The 24S19 has an additional 16 Ohm tap.
(aa) The TP-4 is mounted with coil shields while the 23V118 is mounted with a channel frame.

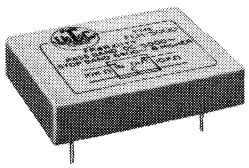
TRANSFORMERS, FILTERS, MAGAMPS, HIGH Q COILS

NEW UTC "FLATS"* ELECTRIC WAVE FILTERS



For other Filters see page 7.

Designed, Manufactured and Successfully Tested to Complete MIL-F-18327B Specifications

These filters meet today's need for flat component configurations, have excellent attenuation characteristics and are ruggedized to Grade 4, MIL-F-18372B. Straight pin terminals and flat construction make these units ideally suited for printed circuit applications. These filters are hermetically sealed in flat metal cases shielded to reduce hum pickup. FP-A case: 2 x 2 x ½" h., 2.5 oz. FP-B case: 2 x 1½ x ⅜" h., 2 oz. **Stock price: $42.00 each net.**

FHH-200: Flat package high pass filter, source and load 10K ohms. Units are within 1 db up to 300 cycles 3 db ± 1 db at 200 cycles, and have an attenuation of at least 40 db at frequencies below 140 cycles. FP-A case. Mil Type: FR4RX33YY.

FLH-600: Flat package low pass filter, source and load 10K ohms. Units are within 1 db from DC to 450 cycles, 3 db ±1 db at 600 cycles, and have an attenuation of at least 40 db at frequencies above 800 cycles. FP-A case. Mil Type: FR4RX11YY.

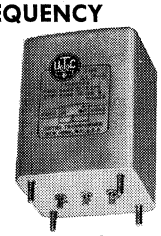
FLH-5000: Flat package low pass filter, source and load 10K ohms. Units are within 1 db from DC to 4.2 KC, 3 db ± 1 db at 5 KC, and have an attenuation of at least 43 db at frequencies above 6400 cycles. FP-B case. Mil Type: FR4RX11YY.

FLL-3500: Flat package low pass filter, source and load 600 ohms. Units are within 1 db from DC to 3 KC, 3 db ± 1 db at 3500 cycles, and have an attenuation of at least 40 db at frequencies above 4500 cycles. FP-A case. Mil Type: FR4RX11YY.

FLL-18000: Flat package low pass filter, source and load 600 ohms. Units are within 1 db from DC to 15 KC, 3 db ± 1 db at 18 KC, and have an attenuation of at least 43 db at frequencies above 23 KC. FP-A case. Mil Type: FR4RX11YY.

FLL-50000: Flat package low pass filter, source and load 600 ohms. Units are within 1 db from DC to 42 KC, 3 db ± 1 db at 50 KC, and have an attenuation of at least 43 db above 64 KC. FP-B case. Mil Type: FR4RX11YY.

NEW, LLP-15, STANDARD LOW FREQUENCY LOW PASS FILTER



For other Filters see page 7.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

The LLP-15 low frequency low pass filter has a loss of less than 3 db at 15 cycles and attenuation of more than 40 db at 30 cycles. Source and load impedance 100K ohms. MIL Type FR4RX11FA. **Dim:** 2 1/16 x 2 5/16 x 3 1/8" h., 1½ lbs. **Price: $60.00 net.**

NEW "FE,* FI,* FO"* MINIATURE INDUCTORS

For other High Q Coils see page 8.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 KC. The FO units are adjusted at 1 V, 400 cycles. All units are adjusted to a tolerance of ±1%. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from −55°C to +100°C. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units Mil Type: TF5RX20ZZ.

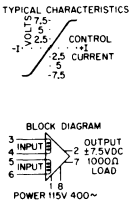
NEW LINE OF SOLID STATE "MAS"* PUSH-PULL MAGNETIC AMPLIFIERS

For other Magamps see page 6.

The "MAS" magamps operate on an input of 115 V 400 cycles with an output of ±7.5 V DC, 1000 ohm load and have 2 isolated control inputs. These magnetic amplifiers afford a **power gain of approximately 30,000.** The power input and output are also completely and individually isolated. The "MAS" magamps are manufactured to MIL-T-27B standards. Units are housed in a hermetically sealed steel case with plug-in octal compressed glass terminals. The "MAS" magamps are 3 inches high with a 1½ inch diameter and weighs approximately ½ pound.



The "MAS" magamps have many advantages over other active circuit elements such as tubes, transistors: • Long life and years of maintenance free operation due to magnetic characteristics and solid state elements. • Ruggedness can withstand high shock, vibration, radiation, and moisture. • Reliability — can withstand 10 times overloads and operate into short without damage.

Possible applications include: • Control Amplifier • Photocell • SCR Controls • Strain Gauge Amplifier • Meter Preamps • Thermocouple • Differential Amplifier • Signal mixing, summing, integration • Hydraulic Servo Valve Driver • Servo Motor • Linear Amplifications of Transducer Signals.

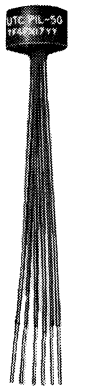
NEW "PIL"* AUDIO TRANSFORMERS



For other PIL'S see page 2.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

These units are the smallest audio transformers available. The DO-T type structure incorporated overcomes inherently poor electrical characteristics usually found in miniature audio transformers. These ultraminiature PIL transformers are engineered to provide top electrical performance. All units are subjected to a 500 volt dielectric strength test, instead of the usual 100 volts, for higher safety margins and reliability.

Units are designed to a field-proven, ruggedized construction with a completely rigid cylindrical bobbin eliminating wire movement and stress. The turns are circular, effecting uniform wire lay and eliminating corner stress. The leads are rigidly anchored to the coil wire terminal board fashion, eliminating the use of tape, and brought out through strain relief. The units are terminated in weldable and solderable, insulated Gold plated Dumet leads. **Dim:** 5/16" dia. x 3/16" h., 1/20 oz.

All units are metal encased to Grade 4. Units made to Class S are available on special order. U. S. Patent No. 2,949,591.

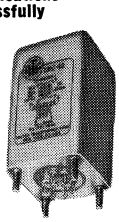
PRECISION SCOTT-T REFERENCE TRANSFORMER NEW SCR-10*

Tested to Complete MIL-T-27B Specifications Designed, Manufactured and Successfully



Used in the precise conversion of three wire synchro information to equivalent resolver information. Two outputs 90° apart are obtained, which can be utilized in analog and digital computer application or coordinate transformation applications. Mil type TF4SX09AJ.

Special custom built units with other electrical values are available to your requirements

Input 90V 60/400~ 3 Phase high impedance suitable for synchro output.

Output 1) 3V @ .25 MA } 2 Phase Output.
2) 3V @ .25 MA }

a) Magnitudes of output voltage matched within 0.25%.
b) Phase angle of output voltages is 90° ± .225°. **AJ case, see page 13**

NEW DI-T200* SERIES TRANSISTOR TRANSFORMERS

These revolutionary transistor transformers embody the same rugged reliable construction afforded by the unique winding techniques and physical construction found in the DO-T & DI-T transformers. DI-T200 series differ by having straight pin, 1" long, .017 d. Dumet wire, gold plated leads.

NEW PIL* ULTRAMINIATURE AUDIO INDUCTORS

The new PIL series constitutes the smallest audio inductors available. These units are metal encased, ruggedized manufactured and guaranteed to MIL-T-27B. They are MIL Type TF4RX-20YY. Physical construction is that of the PIP (DO-T, DI-T) units shown on this page.
PIL units shown: Net Each $6.00

PIP* SERIES TRANSISTOR PULSE TRANSFORMERS

UTC's PIP series of subminiature transistor type pulse transformers is designed to give a maximum of component density in equipments, their configuration being especially compatible with transistors. The design is based on the UTC DO-T and DI-T series to impart exceptional reliability. PIP-1 through PIP-9 have a ratio of 4:4:1, PIP-10 through PIP-12 have a ratio of 5:3:1. All units are checked and adjusted in a transistor test circuit to give the required pulse width.

Hermetically sealed, manufactured & guaranteed to MIL-T-20138B by full environmental testing . . . all units, completely METAL CASED, MIL type TP6RX4410CZ. See UTC page 6 for other miniature pulse transformers.

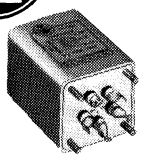
TRANSISTOR TRANSFORMERS

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

TRANSISTOR SUPPLY TRANSFORMERS



Primary 115V. 50/60 cycles (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.CT.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding. All units MIL type TF4RX02.

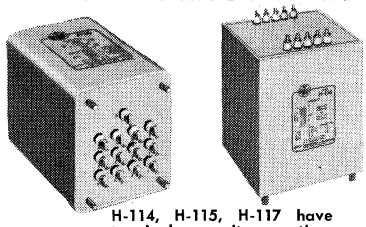
HERMETIC SEALED POWER and PLATE TRANSFORMERS



H-114, H-115, H-117 have terminals opposite mounting.

Power transformers: primary 115V, 60 cycles suited to 50*-1000 cycles service. Plate transformers: primary 105/115/210/220 volts, 50/60 cycles. "L" ratings are choke input . . . "C" ratings are condenser input. H-80 thru H-197 MIL type TF4RX03, H-110 thru H-117 MIL type TF4RX02. The tapped high voltage winding provides either of two secondary voltages for greatest versatility. The power transformer listings indicate DC voltages and permissible currents for both choke and condenser input filters, as well as for military and industrial applications.

"W" suffix units designed for full wave center tap and full wave bridge application. Center tap of secondary may be disconnected from ground.

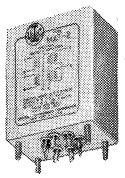
MAT* MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

For new Magamps see page 1.

VACUUM TUBE TYPE



The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27B and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the *Magnetic Structure* is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift.

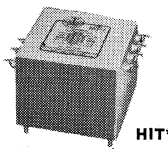
ULTRASHIELDED POWER-LINE ISOLATION TRANSFORMERS

Simulates battery operation for critical circuits requiring extreme isolation from power line.



HIT*

Designed to give the ultimate in isolation, for line-powered equipment, which formerly could only be obtained from battery power. The effective capacity coupling between primary and secondary windings is less than 0.1 MMFD. For this purpose shields are individually terminated to allow maximum flexibility. Input and output terminals are brought out on opposite sides of a special housing in order to maintain the excellent isolation between line and load.

PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are high reliability units, hermetically sealed by vacuum molding and suited for service from −70° C. to +130° C. Wound core structure provides excellent temperature stability (unlike ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width. H-45 thru H-57 ratio 1:1:1. H-60 thru H-69 ratio 4:4:1. Others ratio 5:3:1.

See PIP pulse units on UTC page 2.

INTERSTAGE AND LINE FILTERS

Available in stock frequencies listed below (numerical part of type number is cutoff frequency in cps). Compact shielded cases hermetically sealed to MIL-T-27B specs. BMI, LMI, BML cases: 1 3/16" x 1 11/16" x 1 5/8" h.; wt., 6 oz. HMI, HML, LML cases: 1 3/16" x 1 11/16" x 2 1/2" h.; wt., 9 oz. The BMI filters are band pass interstage units designed to operate between a vacuum tube plate (or 10,000 ohms) and a grid. They provide a gain of 2 at center frequency. BTI units are same as BMI, but 10,000 ohms output.

BML band pass filters, similarly, work into a grid, but have an input impedance of 500/600 ohms. They provide a gain of 9.

HMI filters are high pass interstage units.

LMI filters are low pass interstage units.

HML filter are high pass with input and output impedance of 500/600 ohms.

LML filters are low pass filters with input and output impedance of 500/600 ohms.

LLP low frequency low pass filter, loss of less than 40 db at 20 cycles. Source & load 100K ohms.

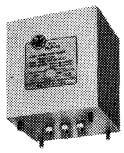
NEW 400-CYCLE 115 V. LINE FILTERS



Intended for use on 115 v., 400 cps line to eliminate harmonic distortion.

UTC No. PLF-25 — Gives 150 v. output into 500 ohm load with ±1 db, 375-425 cps. Will attenuate 800 cycles by 30 db; 1200 cycles and higher by at least 50 db. MIL type, FR4RX11NB. Meets MIL-F-18327B. Size 4 5/16" w. x 5 1/16" d. x 5 1/2" h. Weight, 10 lbs. Net Each $66.00

UTC No. PLP-13 — Eliminates harmonic distortion, rejects 60 and 120 cycles, and gives zero phase shift at 400 cycles. Operating into 1000 ohm load, provides 115 v. output at 400 cycles, within ±1 db, 375-425 cycles. Attenuates 800 cycles by 15 db; 1200 cps by 45 db; above 1200 cps by at least 35 db; 120 cps by 20 db; and, 60 cps by 30 db. MIL type FR4RX22-LB; meets MIL-F-18327B specifications. Size, 3 11/16" w. x 4 5/16" d. x 4 1/2" h. Weight, 6 1/2 lbs. Net Each $66.00

UTC band pass filters for mutiplex transmitting and receiving provide maximum stability in miniature sizes. Stock filters cover all standard transmit and receive bands. All units employ 7 terminal header matching subminiature 7 pin socket.

TGR (receiving) & TGT (transmitting) filters are 600 ohms in and out. They are down less than 3 db at ± 42.5 cycles from center frequency. TGR units are down more than 30 db at ± 170 cycles. Attenuation is greater than 15 db at adjacent channel crossover.

TGT units are down more than 16 db at ± 170 cycles. Attenuation is greater than 7.5 db at adjacent channel crossover. *All units are MIL type FR4RX-22YY.*

These units provide almost the same characteristics as the standard interstage units listed to the left, although extremely miniaturized. Hermetically sealed to MIL-T-27B specs. B type case: 3/4" x 3/4" x 1 1/8" h.; wt., 1 oz. H and L cases: 1" x 1" x 1 3/8" h.; wt., 2 1/4 oz. Cutoff frequencies in cps indicated by type number.

BPM units (BAND PASS) have 2:1 gain. Attenuation is approximately 2 db ±3% from center frequency, and 35 db per octave as shown. Input 10,000 ohms, output to grid, tapped for 10,000 ohms to provide for transistor circuits. For tube circuits continuity is on grid side, for transistor use continuity is on input side.

BPH units (BAND PASS) attenuation less than 3 db ±5% from center frequency, and 40 db per octave. Source and load 500 ohms.

HPM units (HIGH PASS) are down less than 6 db at cutoff frequency, and more than 30 db at .67 cutoff frequency, 40 db at .6 cutoff frequency. Input and output 10,000 ohms.

LPM units (LOW PASS) are down less than 6 db at cutoff frequency, and more than 30 db at 1.5 cutoff frequency, 40 db at 1.65 cutoff frequency. Input and output 10,000 ohms.

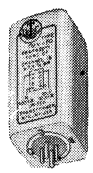
TELEMETERING BAND PASS FILTERS



TMN-.4 thru TMN-1.7
1 1/16 x 1 9/32 x 2"
Weight 3.5 oz
TMN-2.3 thru TMW-70

Weight 1 oz.
MNF-7.35 thru MWF-70
23/32" Sq. x 1/2" high
Weight 1/3 oz.

Both TMN and TMW types are designed for 100 K input and output impedance and have an insertion loss of less than 6 db. Four pin hermetic header matches small Winchester socket.

TMN filters are down less than 3 db at ± 7.5% of center frequency. They are down more than 18 db at ± 25% of center frequency. Attenuation is greater than 40 db beyond 1.75 Fc and .58 Fc.

TMW filters are down less than 3 db at ± 15% of center frequency. They are down more than 20 db at ± 50% of center frequency. Attenuation is greater than 40 db beyond 2.5 Fc and .4 Fc.

MNF and MWF (Minifilter) provide same performance as filters described above but are extremely miniaturized. Slanted toward use with transistors. Pin terminals ideally suited for printed circuits.

HIGH Q PRECISION INDUCTANCE DECADE

Invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base.

HIGH Q COILS & INDUCTORS

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

For NEW Inductors See page 1.

MINIDUCTORS *

All these ultracompact high Q units are grade 5, hermetically sealed to (MIL-T-27B). All give extra temperature stability rated at 1%, −55° C to +100° C.

MM—Ultraminiature epoxy molded toroidal inductors with pin terminals for printed circuit application. Maximum Q at 30 KC. 7/16 dia. x 1/4"; wt. .07 oz.
MH—Ultraminiature epoxy molded toroidal inductors similar to MM except maximum Q at 100 KC. Size & wt. as MM.
ML—Ultraminiature hipermalloy cased inductors with epoxy board and pin terminals for printed circuit application. Maximum Q at 800 cps to 2 KC, depending on inductance. 7/16 x 31/64 x 9/16"; wt. .2 oz.
MO—Miniature epoxy molded inductors with pin terminals for printed circuit application. Maximum Q at 600 cps to 1500 cps depending on inductance. 3/4 x 1 1/16 x 1 3/16"; wt. 1 oz.
MW—Miniature epoxy molded toroidal inductors with pin terminals for printed circuit application. Maximum Q at 5 to 10 KC. 23/32 dia. x 1 3/32"; wt. .25 oz.

HIGH Q TOROID INDUCTORS

Favorites for over fifteen years, UTC HQ Toroids are only excelled by the preferred new "M" series. As typical Q curves show, HQ coils are available for application from 100 cycles to 100 KC. Adjusted to 1%, the inductance is virtually independent of frequency, temperature, and vibration. Voltage stability is excellent, and shielding case assures 80 db coupling attenuation. Hermetically to MIL-T-27B. All units MIL type TF4RX-20YY.

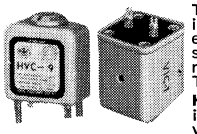
VARIDUCTORS



HVC & HVV **VIC** (*VIC is not a MIL item)

These variable inductors are ideal for use in tuned circuits, equalizers, oscillators, etc. TYPE HVC:—Gives highest Q and stability; adjustable −70% to +200% of mean value. Hermetically sealed to MIL-T-27B.

HVV Types: For precise matching; vernier inductance variation ±10% of nominal value. Offer high Q over a wide frequency range and high temperature stability.

VIC:—Adjustable −45% to +85% of mean value.

Size: HVC, TVC and HVV types, 1 1/8" lg. x 25/32" w. x 1 7/32" h.; weight 2 oz. VIC type, 1 11/32" lg. x 1 1/4" w. x 1 1/16" h.; weight 5 1/2 oz. HVC, TVC, U.S. Pat. No. 2,879,489; HVV, Pat. Pend.

TVC type inductors are identical to HVC units, but provide taps at 30% and 50% of total turns — ideal for oscillator circuits, etc. HVC & TVC, U. S. Pat. No. 2,879,489

LOW FREQUENCY HIGH Q COILS

MQL TYPES

All these units of MIL type TF4RX20YY induct value to 2% tolerance at 1v., 60 cycles. Exceptional Q and stability, inductance swing less than 3.5% from −55°C to +85°C. The case, sealed hermetically to MIL-T-27B is 1 13/16" dia. 2 1/2" h. Either transformer, parallel, series or center type connections are permitted due to dual windings to 4 terminals. Mounting 1 1/2" sq. with a 6-32 screw. Cutout 1 1/2" dia wt. 1 lb.

HIPERMALLOY* TRANSFORMERS

Hipermalloy audio and power transformers are specifically designed for portable and compact service. High fidelity though light in weight and dependable. The frequency characteristic of the Hipermalloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Primary shown is maximum unbalanced.

PLATE TRANSFORMERS

Primaries for 105, 115, 220, 230 volts; 50/60 cycles. For reduced power, secondary can be cut in half, using 220 v. primary on 110 volts; may be used on 25 to 43 cycles in this case. "W" suffix units designed for full wave center tap and full wave bridge application. Center tap may be disconnected from ground.

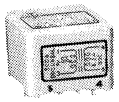
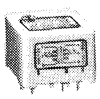
MINIATURE, OUNCER, SUBOUNCER & SUB-SUBOUNCER UNITS

SUBOUNCER*& SUB-SUBOUNCER*AUDIO TRANSFORMERS
TRANSISTOR & TUBE TYPES HERMETICALLY SEALED





Designed, Manufactured and Successfully Tested to complete MIL - T - 27B Specifications.

UTC SSO-#P and SO-#P units are ideal miniaturized components having high efficiency and wide frequency response. Special nickel iron core materials and winding methods provide exceptional performance and reliability.

SO-#P UNIT Dim. ¾x1x2 3/32" Pin Length ¼" Wt. .....05 lb.

SSO-#P UNIT Dim. ¾x⅞x9/16" Pin Length ¼" Wt. .....04 lb.

SML-70 7/16x31/64x9/16" Wt. .2 oz.

These units are vacuum molded to MIL Grade 5. They employ 50 mil deeply anchored pin terminals ideally suited for printed circuit and transistor application. Terminals are strong enough to support these light weight units.

The UTC SML-70 is an ultra miniature transformer providing high shielding, extremely low insertion loss with wide band response, 200 cycles to 20 kc. These units are provided with pin terminals (.025 dia.) strong enough to support the unit and are ideal for printed circuits.

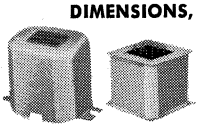
AMATEUR & PUBLIC ADDRESS TRANSFORMERS "S"* SERIES

DIMENSIONS, SPECIAL SERIES TRANSFORMERS



G-1 thru G-4 G-5 thru G-12

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. These units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided, permitting above chassis or breadboard wiring in addition to standard chassis type.

PHOTOFLASH TRANSFORMERS

STANDARD 982

Can be used for either standard (Amglo type) or trigger (Sylvania type) multiple flash tubes. Circuit details included with transformer.

PF-1 Primary for 115 volts, 50/60 cycles. Secondaries for power supply delivering 2200 volts DC to condenser up to 100 Mfd. Compound sealed in G-3 (Pg.11) case 2⅛ x 2¾ (3¾ including flanges) x 2½ inches high. Weight 2 lbs. **Net Each $8.40**

PF-3 Trigger Transformer 15 KV peak. ⅞ O.D.x3 long. Weight 2 oz. **Net each: $6.00**

PF-6

TRANSISTOR TYPE

These are miniaturized light weight units for transistor type photoflash supply.

PF-5 Primary for 115 volts. 50/60 cycles or for 4½ V. battery switched by PF-6 inverter transformer. Output delivers 400 V.-DC when used in voltage doubler circuit to charge photoflash capacitor (typically 40 watt-Sec.). G-1 case (Pg. 11)
Net each: $8.40

PF-6 Inverter transformer transforms 4½ V. DC from battery to input for PF-5 stepup transformer. Ouncer case (Pg. 11)
Net each: $5.10

PF-7 Trigger transformer. Shorting .25 mfd. capacitor (charged to approx. 225 V. DC) across terminals 1-2 produces 6 KV pulse at terminal 3 for triggering flash tube. ⅞" Dia. x 15/16"; Wt. ½ oz. **Net each: $3.60**

LINE VOLTAGE ADJUSTERS WITH METER (FIG. G. SEE PG. 12)

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage. These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly. The nine tap switch provides for line voltage of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output model. All units are designed for 50/60 cycles service and come complete with 6 foot input cord and plug and outlet receptacle.

SIGNALLING AND CONTROL TRANSFORMERS (FIG. H SEE PG. 12)

Primary 110-120 volts, 50/60 cycles—Secondary
4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

Type No.	Rating Watts	L	W	H	Mtg. Dim.	Wgt. Lbs.	Net Each

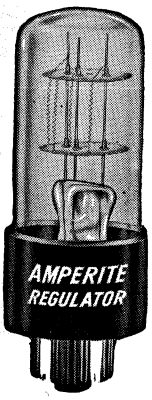
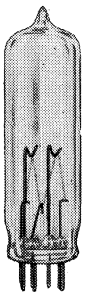
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE



STANDARD



MINIATURE

AUTOMATIC REGULATION

WHAT IT IS

The *AMPERITE Ballast-Regulating Tube* is an automatic *"rheostat"* designed to keep the current in a circuit at a definite value, for example, 0.5 amp.

Should the supply voltage increase, the *Amperite* will automatically increase in resistance enough to take up the increase in supply voltage — keeping the voltage on the load constant. It consists of an iron wire *hermetically sealed* in a bulb containing *hydrogen* or *helium* — the two gases with the *highest heat conductivity*. Its regulating action is based on the high temperature co-efficient of resistance of the iron wire and the rapid cooling of *hydrogen* or *helium* gas.

Being a constant current device, the *AMPERITE Ballast-Regulating Tube* can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

AMPERITE NEON LAMP
TYPE NE70V Net $1.80

GENERAL ADVANTAGES:

• Light, compact • No moving parts • Rugged; will withstand vibration of 10G. minimum • Hermetically sealed; not affected by altitude or humidity changes • Can be changed as easily as a radio tube • Operates equally well on A.C. or D.C. • Inexpensive

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation 50w per tube (ST19 bulb). Any number of AMPERITES with the same voltage range can be operated in parallel. AMPERITES should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended	**2000 Hours**
If operated continuously at maximum voltage	**1000 Hours**
If operated continuously at 80% maximum voltage	**5000 Hours**
If filament is operated below glow point	**5000 Hours up**

In operation, the *Amperite* filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning *Amperite* on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an *Amperite Ballast Tube* depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 90% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current—voltage threshold value. For example:

Amperite Number	3-4	3H4	10-7	12-11	12H11
Threshold Current	0.3	0.35	1.0	1.2	1.25
Threshold Voltage	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

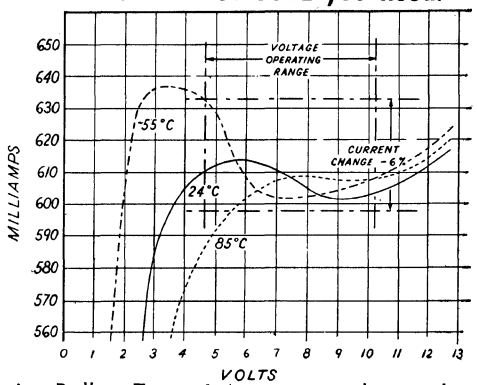
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

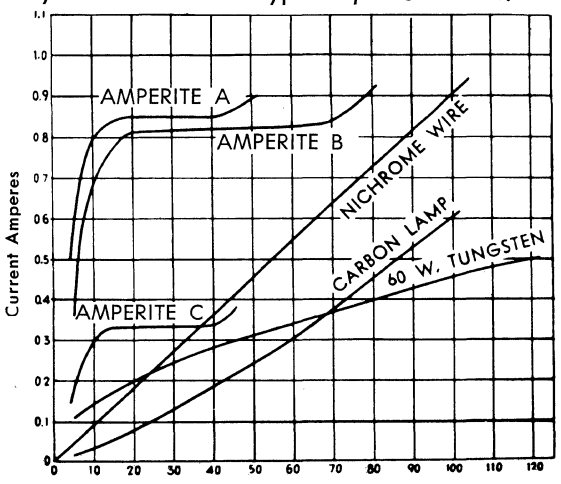
AMBIENT EFFECTS

Ambient temperature variation of −50° to +70° C will change the current value of an *Amperite* approximately 2% on regulating portion of curve as shown directly below. Being hermetically sealed the *Amperite* is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.



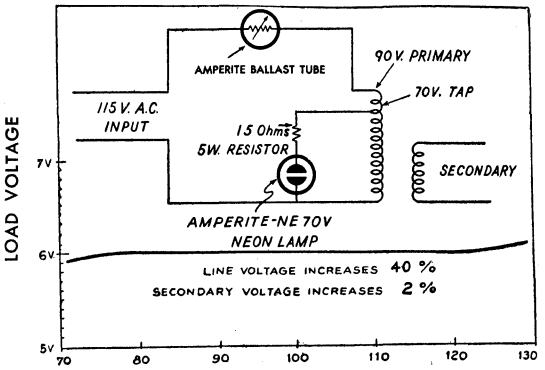
Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of −55°, 24°, and 85° C. The percentage change with ambient is approximately the same with all type *Amperite* ballasts.



This diagram illustrates far superior regulating characteristics of the *Amperite* Ballast-Regulating Tube. ***STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.***

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of *Amperites* of the same voltage range can be placed in parallel to obtain proper current. The current can be kept to ± 1%. Advise voltage variation and currents desired.



A light, compact, and inexpensive method of obtaining close regulation is to use an *Amperite Ballast Tube* with an *Amperite* Neon Lamp — type NE70V. Base octal-base wiring-prongs 2-5. One NE70V is used for all loads up to 100W.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill in and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

POWER SUPPLY	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	11.4-13.8V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	12.4-12.8V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	5.3- 7.4V	9.6-19.2V	15- 30V
Current Variation	.29-.32a	.29-.32a	.29- .32a	.29- .32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain ± 2% current regulation on load. Better regulation is obtainable by increasing the voltage across the **AMPERITE.** Up to a point, the higher the percentage of the supply voltage taken up by the **AMPERITE,** the better the regulation.

Radio tube filament loads — have low cold resistance which causes a high initial surge. For such loads we recommend a bleeder of 20 to 50% prox. of load and the corresponding **AMPERITE.** e.g.

FILAMENT LOAD	USE AMPERITE	TOTAL CURRENT
0.3a	4HTF4	0.45a
0.6a	8-4	0.8a
0.7a	9H4	0.95a

On Radio tube filament loads the bleeder will also improve the regulation.

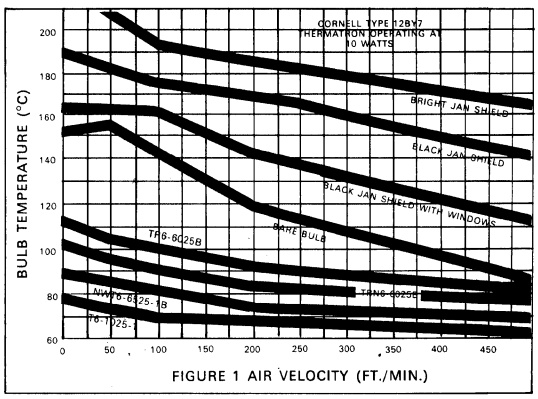
Heat Dissipating Electron Tube Shields

Most tube type electronic equipment failures occur because of tube failures. Tubes fail primarily because of the heat they generate and the environment in which they operate. If tubes are operated at a lower bulb temperature, their life can be extended.

The simple solution to high tube temperature is the application of *heat dissipating tube shields*. The former universally used but now obsolete JAN shield (specifically prohibited by all military services and FAA, although millions are still in use) actually raises bulb temperature above that of the bare tube. The JAN shield was applied to shield tubes electrostatically and retain them in the socket. However, it allows a dead air space between shield and tube that, in effect, traps the heat generated by the tube, raises the bulb temperature and reduces the life of the electron tube.

On the other hand, a tube with an efficient heat dissipating shield will operate cooler in a still air environment than a bare tube in a 500 fpm forced air environment. This is illustrated in Figure 1.



It is conservatively estimated that if effective heat dissipating tube shields were applied to all tubes in the average equipment, at least half of all tube failures would be eliminated with resulting reductions in maintenance and down-time costs.

TRN SERIES HEAT DISSIPATING SHIELDS

IERC's TRN Therma-rel shield can give you six times longer use of electronic equipment before failure. A full set of TRN shields can frequently be installed in an average piece of test equipment for less than the labor cost of replacing one bad tube. Cost of an individual TRN shield is only a fraction of that of a replacement tube. In spite of the low cost, the TRN shield meets or exceeds all military requirements for heat dissipating tube shields, and is qualified to MIL-S-9372C (USAF). You can increase the reliability and decrease maintenance cost of Hi-Fi or ham gear, test equipment in lab or production line, or the systems, sub-systems and test equipment your company builds, by using IERC heat dissipating tube shields. The IERC TRN shields are designed to replace the obsolete JAN shield, as well as for use in new equipment. A flexible, black cadmium plated beryllium copper liner hugs the bulb of the tube, adapting to variations in bulb contour and diameter. Positive base attachment gives TRN shields superior retention in a shock and vibration environment. Act now—order from your nearest IERC authorized industrial distributor.

General Electric TV picture tubes feature many multipurpose designs that replace several of the most commonly used types. Each SG type replaces a number of other types, as shown in the tables.

All material and parts used in the manufacture of General Electric picture tubes are new except for the envelope (and screen and aperture mask assembly in the case of color tubes) which, prior to re-use, have been inspected and tested to meet our high quality standards.

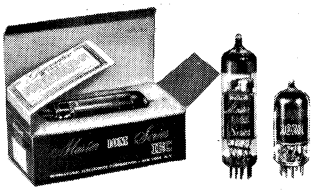
Master 10M Series



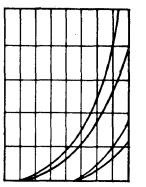
- TUBE-TO-TUBE UNIFORMITY
- SECTION-TO-SECTION UNIFORMITY
- LONG LIFE
- GUARANTEED PERFORMANCE
- FOR THE BALANCE ORIGINALLY DESIGNED INTO THE CIRCUIT

A selected series of individually laboratory-tested tubes, ideal for today's technically-advanced and exacting electronic equipment . . . meets more stringent requirements . . . individual foam cushion packaging for protection during handling and shipping. Each Master 10M tube guaranteed for 10,000 hours of effective performance within two years from date of purchase. Recommended for the full range of electronic equipment.

TYPICAL TEST SPECIFICATIONS 12AT7 DOUBLE TRIODE

TEST CONDITIONS:
Vf 12.6V
Va 250V
V_{g1} —2V

LIMIT EACH TRIODE
Ia Min. 8.8 Ma
Max. 12 Ma
I_{g1} Less than 7μA
Ia Triode No. 1 vs. Triode No. 2 Less than 15% deviation.



Cutoff less than 20 μA with 8V on grid.
Insulation heater to cathode, less than 7μA.
Insulation heater to cathode less than 7μA.
Insulation heater positive, cathode negative with 125V on plate: Less than 20μA.

HUM AND MICROPHONICS

Check to close parameters special test specifications and circuits to be given upon request.

Typical Ia curves with voltage ratings from 100 to 250V.

PENTA POWER TUBES

Beam Pentodes
Tetrodes
Triodes
Vacuum Switches

When you specify Penta Power Tubes, you can enjoy the same benefits that hundreds of equipment manufacturers and power tube users receive today. The "extra care" production and test methods Penta employs in manufacture result in proven power tube reliability, long life and high efficiency.

Single-pole, double-throw switches enclosed in evacuated glass envelopes. Ideal where compact, fast-acting relays are needed to switch high-voltage circuits under a wide range of ambient atmospheric conditions, including explosive atmospheres; also, where exposed-contact relays would be unsuitable. Operated by external actuating coils excited by direct current. Designed so that soft-iron pole piece and envelope-enclosed armature assembly act to complete the magnetic circuit.

SHIELDMU® TAPE AND FOIL FOR ELECTROMAGNETIC SHIELDING

Table I, at right, lists the currently acceptable magnetic materials used for shielding electronic and electrical components. Stray magnetic fields are easily shunted around sensitive components by use of these high permeability magnetic materials.

Magnetic Metals' SHIELDMU gives the designer a full range of magnetic performance for construction for formed-in-place shields. All SHIELDMU types are available from stock in a number of thicknesses and width for convenient application; SHIELDMU 1 is currently available in .006" thickness only.

ECONOMICAL SHIELDING with SHIELDMU TAPE and FOIL

Magnetic Metal's SRIELDMU tapes and foils are fully processed and ready to use; heat-treatment is not required after forming. Formed-in-place shields save time and expense when compared to fabrication of special shields. This is most important where experimental results are urgently required, or where small quantity needs make tooling costs uneconomical.
Many manufacturers form shields in place around inductive components to save space and achieve magnetic component isolation. Use of tapes and foils also reduces stocking problems associated with drawn or fabricated component shields.

SELECTING SHIELDMU

Shieldmu is provided in four levels of permeability performance. Each is designed to meet the specific requirements of various shielding applications. Multi-layer shields using different materials often give the most economical result by putting high flux capability materials in the region of the strongest field. The high permeability layers are then most effective at the lower field strengths. Shieldmu with adhesive backing eliminates the necessity of taping or spot welding Shieldmu in place.

The thickness of the adhesive itself (not counting the peel-away paper layer) is nominally .001". Clear in color and chemically stabilized for long term life, the adhesive has a bond strength ranging up to 60 oz. per inch at a 90° pulling angle. It is a rubber-based thermoplastic which may be operated in temperatures up to 300°F.

TABLE I

Typical Class of Material	Trade Designations
50% Nickel-Iron Alloys	Shieldmu 30, Hymu 80, Mumetal, Hipernom
80% Nickel-Iron Alloys	Shieldmu 10, 49 Alloy, 4750, Hipernik, Nicaloi
Silicon-Iron Alloys	Shieldmu 3
Low Carbon Steel	Shieldmu 1

ORDERING INFORMATION:

Shieldmu is carried in stock by your local distributor in twelve-inch square pieces (album packed), as well as in various width and lengths wound on spools. When ordering, please use the part number indicated in the following price lists; each letter and digit is coded to indicate a specific requirement as shown in the examples below:

Now Available . . . 2″ SHIELDFLEX FLEXIBLE TUBING

We have now added a larger diameter to our variety of Shieldflex sizes stocked at your local electronic distributor. This heavier, larger tubing is especially valuable in applications involving communications.

SHIELDFLEX FLEXIBLE TUBING FOR ELECTROMAGNETIC SHIELDING

Shieldflex tubing is specially designed and constructed to provide both electromagnetic and electrostatic shielding of current carrying conductors. The flexibility of the tubing permits close routing of conductors around components or other conductors, thus effecting space economy so important in miniaturization of components. Production economies are possible also because of the simple operation required — simply run the cable through a length of Shieldflex. Time consuming work of wrapping cables with Shieldmu tape can be reduced by using Shieldflex.

SHIELDFLEX flexible tubing for magnetic shielding is formed from high permeability yeylectromagnetic alloys in a spirally wound construction.

ORDERING INFORMATION:

Random lengths of Shieldflex in 14 diameters can be purchased from your local electronic distributor. When ordering, please use the part numbers as presented in the price list above.

EXAMPLE:

F30 — performance designation
10 — material thickness (in .001 inch units)
FT — internal diameter (in fractions of an inch)

DIRECT INTERCHANGEABILITY LIST

This Interchangeability Index has been prepared to assist you in finding exact replacement for electronic tubes in the Industrial, Transmitting and Special Purpose fields.

This listing is believed to be accurate to the date of issue, However, no responsibility is assumed by Westinghouse for its completeness or for its use, nor for any infringement of patents or other rights of third parties which may result from its use.

KEY TO ABBREVIATIONS

CR — Cathode Ray
CS — Camera or Storage
Glow — Glow Tube (Cold Cath.)
GA — Vacuum Gauge
Ig — Ignition
IR — Industrial Receiving
MD — Microwave Device
N — Neutron Detector
Photo — Phototube
Rect — Rectifier
Thyr — Thyratron
Trans. — Transmitting
VR — Voltage Regulator or Reference
HCDD — Hollow Cathode Discharge Device

THYRATRONS

A thyratron is a gas tube having a heated cathode and one or more electrodes which initiate the current flow. The gas content may be one or more of the inert gases, mercury vapor or a combination of these. Mercury-vapor types are used where ambient temperature ranges are small. Inert gas types change characteristics very little with ambient temperature changes and do not require as long a warm-up time before applying anode voltage.

In a high vacuum tube, the negative field of the grid space charge acts to limit the flow of electrons. This space charge is neutralized by positive ions during conduction through a gas or vapor such that the voltage drop through the tube is reduced. With smaller tube losses, the thyratron can conduct more current with less cooling required than an equivalent high vacuum tube.

The grid has no control of the current after conduction starts. With direct current supplied to the anode, it is necessary to reduce the anode voltage below the ionizing potential of the gas fill, long enough for the gas to deionize and stop tube conduction. With alternating current supplied to the anode, the grid regains control of the current each time the voltage drops to zero and can delay the beginning of conduction to a later point in the next half-cycle by being held at a negative voltage. The grid can exert very fine control of the average current, with alternating current anode and grid supply by varying the phase relation between the voltages impressed on them. The grid circuit requires very little power to control the thyratron compared to the power controlled in the anode circuit.

Thyratrons are used in light duty resistance welders, motor speed and torque controllers, relaxation oscillators, variable voltage power supplies, control circuits of lighting or heating devices, light sensitive relay exciters, and other equipment requiring either precise control of average moderate currents or ability to turn on moderate currents by a small voltage change.

HIGH VACUUM AMPLIFIERS

High vacuum amplifiers are multielectrode tubes with heated cathodes and one or more electrodes which are able to control the current flow through the tube. These types are similar to the high vacuum rectifiers with the addition of control electrodes.

The current is limited by the formation of a negative space charge near the cathode. A positively charged grid will tend to neutralize this space charge permitting more electrons to go to the plate. A negatively charged grid will tend to increase this space charge reducing electron flow and if the grid is sufficiently negative, it will cut off the electron flow. The grid has continuous control of the number of electrons allowed to go to the plate. This controlled power ranges from a few watts in smaller designs to hundreds of thousands of watts in the largest designs. By proper design of the electrode structure, the tube can be made to control more power in the plate circuit than is required in the grid circuit. The tube therefore can act as an amplifier. By feeding back part of the output power to the grid circuit, the tube can be made to generate sustained oscillations. This arrangement is termed an oscillator.

Additional electrodes are employed in tetrodes and pentodes as electrostatic screens and to suppress secondary emission from the plate. Electrodes may also be designed to form electrons into beams or sheets. These variations are usually incorporated to overcome inherent faults of the basic triode and to increase the efficiency and power handling capability of the tube. Some types have two units in one envelope to conserve space, reduce cost, and simplify circuit designs.

The cooling of the tubes handling large amounts of power must be carefully controlled. Radiation with free air convection is employed with types having low dissipation ratings for their size. With these types care must be taken that nearby components are not damaged by directly radiated heat. Tube types with medium size dissipation ratings often have finned radiators soldered to the anode and heat is dissipated by forcing air through the radiator. High vacuum amplifiers with high dissipation ratings are operated either water cooled or vapor cooled. Both groups require water with low mineral content. Cooling system control circuits should be provided to remove power from the tube if cooling is inadequate.

Tubes designed for communications service (such as types 891, 892, 895 and 5606) have thin anode walls and should not be used in industrial heating applications. The wide fluctuation of loading and impedance, inherent in this service, induces parasitic and arc-discharge conditions which require the greater thermal inertia of a thick anode wall. Overload and arc sensing circuits designed to remove or divert power from the tube within 6 cycles of energy are also essential.

High vacuum amplifiers are used to generate, amplify or modulate audio or radio frequencies in radio and television transmitters and induction and dielectric heating equipment for industrial use.

Notes

1. Ratings and Performance are based on CCS Class C Telegraphy service unless otherwise shown.
2. Excluding flying leads and protruding side terminals, pipes or handles.
3. Highest frequency for full input.
4. For triodes, amplification factor (μ) is shown; for tetrodes, beam tubes and pentodes, transconductance (gm) in micromhos is listed.
5. Watts output at 500 megahertz.
6. Milliwatts output at 3000 megahertz.
7. Twin unit tube, Ratings are each unit, Performance for both units.
8. Parallel heater connection requires half heater voltage and twice heater current.
9. For d-c and single phase a-c. For 2 phase a-c voltage per phase will be half listed value and current per phase will be listed current value.
10. Listed values of filament voltage and current are per phase for 3 phase operation.
11. Designed for audio and ultra-sonic service, Ratings are single tube Class AB and Performance is for 2 tubes Class AB.
12. Ratings and Performance are for Class AB r-f amplifier service.
13. For anode current of 1 milliampere maximum at maximum anode voltage.
14. For oil immersion, cooling value is 14 kilowatts.

HIGH VACUUM RECTIFIERS

High vacuum rectifiers are two electrode tubes with heated cathodes. Electrons emitted from the cathode are attracted to the plate when it is positive with respect to the cathode. These electrons form the tube current. High vacuum rectifiers are not very efficient for rectifying large currents, since the space charge increases the tube drop, but in applications involving very high voltages at low currents or a linear characteristic they are necessary. The absence of gas provides very high insulation during the inverse half cycle. Pure tungsten or thoriated tungsten filaments are used to permit short delay periods between the application of filament voltage and plate voltage. High vacuum rectifiers are used in high voltage power supplies for electrostatic precipitation of vapors and dust such as the Precipitron® and high voltage testing of materials, to absorb high voltage inverse pulses such as reflected radar pulses, to permit undirectional capacitor charging in pulse shaping networks, to produce the high accelerating voltages used in x-ray tubes and any other devices requiring small currents at very high voltages.

COLD CATHODE GAS-FILLED TUBES

Cold cathode glow tubes have two or three electrodes and an inert gas fill. One popular type of two electrode tube is the voltage regulator tube. This type maintains a constant voltage drop with varying load currents.

The KX-642 provides over-voltage protection for power lines. It shorts out surges due to switching or lightning.

The gas triodes have a starting electrode which, when excited, starts tube conduction at a lower voltage.

Atomic Absorption Spectroscopy

One of the major uses of Westinghouse hollow cathode tubes is in the field of atomic absorption spectroscopy to measure impurity traces as small as 50 parts per billion. This analytical technique uses a hollow cathode tube as a source of monochromatic spectral lines of the cathode element or elements. Components necessary for making atomic absorption spectroscopic measurements are 1) a source (hollow cathode tube) of atomic spectra of the desired element, 2) a flame, 3) a monochromator, and 4) a detector. These components are shown in the accompanying diagram. To perform an analysis by this technique a hollow cathode tube with a cathode of the desired element, for example copper, is used as the source of excited copper atoms. The radiation from the tube is passed through a flame, a monochromator and then into a detector where a signal will be registered at the 3247 A copper line. A solution containing copper may then be aspirated into the flame. This will cause a reduction in the signal at 3247 A because of the absorption of some of the energy from the excited copper atoms by the unexcited copper atoms in the flame. By aspirating standard samples containing varying amounts of copper into the flame a calibration curve may be drawn. An unknown sample may then be aspirated into the flame and the copper concentration determined directly from the calibration curve.

This description is rather simplified. More sophisticated systems and equipment have been devised and are now available commercially from several companies.

3. **CURRENT RATING**
   The current rating shown is the maximum permissible figure and does not represent typical operation. For optimum performance and life, a tube should be operated at the lowest current consistent with the desired output characteristics.

LITHIUM CAUTION

Output from a Lithium cathode tube with neon fill will experience second-order interference from the Ne-3355 line. However, operation with any one of the listed Corning Glass sharp-cutoff filters will eliminate the interference and is to be preferred over the argon-filled tube.

PHOTOTUBES

Phototubes conduct electricity when light strikes the photocathode. Variations in light intensity produce variations in current conducted. Vacuum types have a linear response to light intensity whereas gas filled types are more sensitive to light changes. Photomultiplier types have internal current amplification by auxiliary electrodes called dynodes. They have, therefore, larger signal output than the gas and vacuum types.

Phototubes are used in motion-picture-film sound-pickup heads, automatic headlight dimmers, light-operated door openers and burglar alarms. Industrial uses include counting, color matching, sorting, measuring, detecting products at various stages of manufacture, printing press registry and dyestuff process control.

GAS AND MERCURY VAPOR RECTIFIERS

Gas and mercury vapor rectifiers are two electrode tubes with heated cathodes filled with either a low pressure of inert gas or mercury vapor. Mercury-vapor filled types are more sensitive to ambient temperature changes than types filled with inert gas.

Current conduction in an atmosphere of gas molecules causes ionization freeing ions which neutralizes the negative space charge. The removal of the space charge lowers the voltage needed to accelerate electrons from the cathode to the anode. This lower tube drop allows higher currents to be conducted with lower losses than an equivalent vacuum type.

Gas and vapor rectifiers are used in a variety of single and multiple tube circuits to provide operating voltages to large amplifier tubes used in radio broadcasting or industrial heating and in other applications requiring large amounts of current at high voltages.

IGNITRONS

Ignitrons are gas-discharge, pool-type cathode tubes in which current conduction is initiated for each conducting cycle by means of an electrode called an ignitor. The ignitor is a small conical refractory element projecting into the mercury. When a relatively small current is conducted through the ignitor to the mercury, ionization of some mercury molecules in this area takes place. Ignitrons are of the half-wave type and current is conducted only when the anode is positive with respect to the cathode and the ignitor is fired.

Control of the average conducted current is accomplished by phase control of the point in the input cycle at which the ignitor is fired. During the non-conducting cycle, ionization in these single-anode tubes is very low; the resulting reduction of shielding necessary to prevent arc-backs lowers the arc voltage and permits operation at lower supply voltages. Ignitrons therefore have some of the control characteristics of thyratrons and, having a mercury-pool cathode, are capable of conducting very large currents. Water cooling of metal envelopes is used on most types to further increase current carrying capacity in a compact tube. Provision is made on some of the tube shells to connect thermostats for tube protection and water saving. Ignitrons are used in resistance welders, frequency-changer resistance welders, power rectifiers, high current switches in controlled fusion equipment, heat control devices for air-frame testing, and any circuit requiring precise control of large amounts of alternating or direct current.

NEUTRON & RADIATION DETECTION TUBES

Radiation detection tubes are electronic devices which permit the passage of electrical current between electrodes when exposed to penetrating radiation. A variation of the intensity of radiation causes a corresponding variation in current between the electrodes. The tubes are designed to respond primarily to neutrons of thermal energies. Radiation detection tubes are of three general types: $B^{10}F_3$ (Boron Trifluoride) filled proportional counters, Uranium coated counters or ionization chambers, and B^{10} (Boron 10 Isotope) coated ionization chambers. At low levels of neutron flux, the current pulses due to the incident thermal neutrons are comparatively few in number, and therefore do not provide a steady current output. For this reason, in low flux level application, highly sensitive detector tubes, either BF_3 filled or Uranium coated are used in a pulse counting type circuit. The tube output is fed into a suitable amplifier, and pulses, proportional to the number of incident thermal neutrons, are registered on a scalar or rate meter. In applications of detector tubes in pulse counting, those pulses arising due to gamma photons which frequently accompany the neutron flux are sufficiently small that they may normally be biased out by a simple discriminator circuit. Uranium coated and B^{10} coated ionization chambers are used in higher neutron flux levels. The tubes are self-integrating, and the output, proportional to the incident thermal neutron flux, is read directly on a d-c current indicating device. The gamma photons, frequently accompanying the neutron flux, usually constitute a very small percentage at high neutron flux levels, and as such contribute insignificantly to the signal current. In applications involving a high gamma flux, however, the compensated ionization chamber may be used. This tube electrically reduces the signal due to gamma flux. This compensation is achieved by having two concentric volumes. One of these is sensitive to neutrons and gamma flux. The other is sensitive to gamma flux only. The effective gamma sensitivity of these volumes is made equal. The output signals from the volumes are combined with opposite polarity and the signals due to gamma flux cancel each other. The effectiveness of this cancellation is limited primarily by instrumentation and the reactor characteristics. In application the gamma sensitivity of this tube may thus be reduced by a factor of 100 to 1000. The lower operating limit of the compensated ion chamber is reduced still further by using a guard ring construction. With a guard ring construction, leakage currents, through the insulators due to the applied voltages, flow to ground and not through the signal circuit. Radiation detection tubes are used as laboratory instruments in atomic and nuclear radiation investigations, in the control of reactors, and in health monitoring for personnel protection.

CAMERA AND STORAGE TUBES

Vidicons are compact, light-weight camera tubes which require simple circuitry and render acceptable performance in most applications. They find wide usage in closed circuit or industrial television (ITV) systems and in film cameras for commercial television stations. Common applications include industrial surveillance of property and process, remote or magnified observation of medical operations, military surveillance and remote signature check or record survey in financial institutions.

DISPLAY - STORAGE TUBES

Display storage tubes are cathode-ray tubes with the ability to integrate successive increments of a display or repetitive weak signals to form a high-brightness image with duration sufficient to photograph or examine it. Applications range from airborne radar to transient study with sophisticated oscilloscopes.

INDUSTRIAL RECEIVING TUBES

APPLICATION CLASSES FOR INDUSTRIAL RECEIVING TUBES

Industrial Receiving tubes serve as low-level amplifiers, mixers, detectors, gating or coincidence tubes, oscillators and relay drivers in military and industrial equipment. These tubes may incorporate one or more of the following premium design features for improved reliability: 1. rugged structure, 2. performance stabilization by burn-in or seasoning, 3. maintenance of peak emission during prolonged cutoff operation, 4. more uniform characteristics, 5. long heater life with heater cycling, and 6. low internal noise.

Special Purpose Tubes are used in industrial process control, military and commercial communication and electronic computing equipment.

| This group of types, although no longer used in new industrial equipment designs, is made available for maintenance because of their previous popularity. All of these types have been updated to the latest design techniques and new materials to

provide better reliability than was possible when they were originally introduced.

II Premium types designed specifically for applications involving greater shock and vibration environments. Designs are built for greater mechanical strength and rated for long life and reduced spread of characteristics.

III Designed primarily for computer service where on-off control applications with long periods of cutoff operation involved.

IV Special audio output beam power tubes.

V Specifically designed for mobile communications equipment to withstand variations in supply voltage and cycling conditions.

VI Types designed particularly for the instrumentation market for long life stability and low cathode interface are prime requirements.

VII Designed especially for audio amplifiers where, hum, noise and microphonics are critical.

VACUUM MEASURING TUBES

Vacuum measuring tubes are designed to become part of an evacuated system. With suitable circuitry, the pressure in that system may be accurately determined. The Bayard-Alpert ionization gauge is used for measurement of very low pressures. The Schulz-Phelps ionization gauge measures pressures up to one atmosphere. The Pirani and thermocouple gauges are less accurate and measure only the higher pressures, but, their associated circuitry is much simpler.

These tubes are used in electron tube and semiconductor device processing control, vacuum deposition, research and rocket altimeter applications.

MICROWAVE TUBES AND DEVICES

Microwave Tubes and Devices fall in three main categories:
Magnetrons: Magnetrons generate energy in the microwave frequencies by interaction of an electron in a combined electrostatic and magnetic field with integral resonant cavities. They are widely used in radar transmitter, microwave test, altimeter and telemetry instruments.
Reflex Klystrons: Reflex Klystrons generate low-power energy in the microwave frequencies by electron reflection excitation of an integral resonator. They are used in radar receivers, low-power radar transmitters, telemetry, microwave communications, microwave test equipment and as parametric amplifier pumps.
Reference Cavities: Reference cavities are fixed-frequency, temperature compensated, vacuum-sealed devices used as frequency standards in microwave transmission equipment.

INDUSTRIAL & MILITARY CATHODE RAY TUBES

Industrial & Military Cathode Ray Tubes are structurally similar to Television Picture Tubes. Their common characteristics include a gun which forms electrons emitted from a thermionic cathode into a cylindrical beam, suitable deflection provision for the beam to strike any area of the screen and a phosphor screen which emits light when high-velocity electrons strike it.

The Westinghouse Industrial & Military Cathode Ray Tubes represent a high degree of engineering achievement in the field of display tubes for specialized applications. High resolution guns, special phosphors and improved mechanical design are some of the distinctive features of these tubes. They are designed for service in oscilloscope, radar display, flying-spot scanner, video monitor and computer readout applications.

PRICES

Prices in this MASTER should not be considered as final. INQUIRE ABOUT LATEST PRICES AND DELIVERY.

DISCOUNTS

Trade discounts apply in most cases where LIST PRICES are shown.

ORDERING

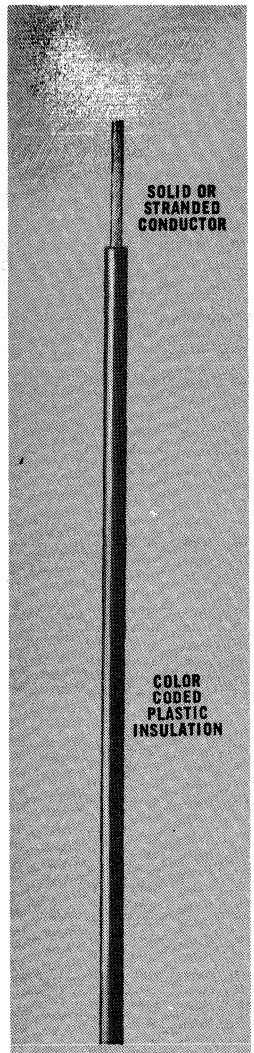
Since previous editions of the MASTER are frequently referred to, it is important, when ordering, to mention specifically the edition and page number, also the catalog number of each item. This will avoid possible confusion and delay.

INVENTORY

While most distributors maintain a large and varied stock, they do not represent that they stock all manufacturers' products shown in this MASTER catalog.

Mil-W-76B Plastic Wire

TYPE MW — UNCOVERED PLASTIC



DESCRIPTION: Solid or extra flexible stranded tinned copper, color coded **medium wall** polyvinylchloride insulation. **(Nom. wall thickness .016".)**

CHARACTERISTICS: Temperature rating −40°C to +80°C, Voltage rating 1000 volts. Resistant to acids, alkalis, oil, flame, moisture and fungus.

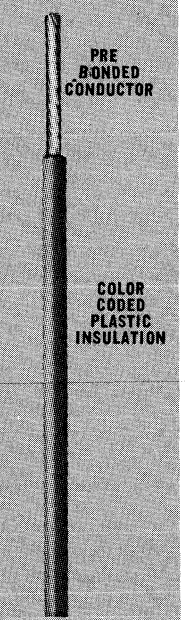
TYPE B — UNCOVERED PLASTIC

Pre-Bonded Tinned Copper Conductor



DESCRIPTION: Each strand of the conductor is double tinned and then heated, which bonds the individual strands together for easy stripping. Color coded .010" polyvinylchloride insulation. The insulation meets requirements of MIL-W-16878D.

CHARACTERISTICS: Temperature rating −55°C to +105°C. Voltage rating 600 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATION: A pre-bonded conductor is the ideal construction when leads are to be cut and stripped for point to point wiring. The pre-bonded conductor maintains much of the flexibility of an ordinary stranded wire but reduces processing and handling costs on soldering, retwisting of strands after stripping and hand tinning operations. Since the individual strands are bonded, expensive induction heating equipment is unnecessary.

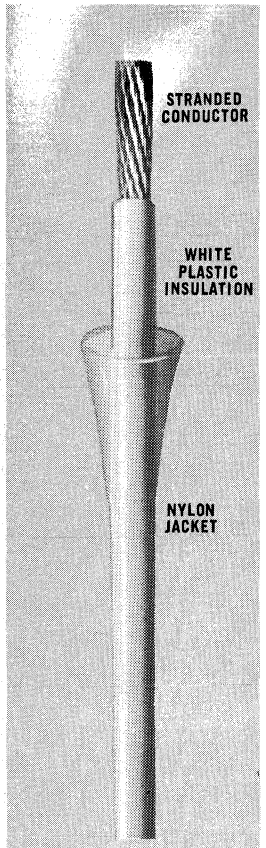
Mil-W-5086A

UNSHIELDED AIRCRAFT WIRE FOR ELECTRICAL SYSTEMS



DESCRIPTION:

MIL-W-5086A—Type I — AN-22 thru AN-12—Single conductor stranded tinned copper, **white** polyvinylchloride insulation, clear nylon, (polyamide) jacket overall.

MIL-W-5086A—Type II— AN-22 thru AN-12—Single conductor stranded tinned copper, **white** polyvinylchloride insulation, white glass braid, clear nylon (polyamide) jacket overall.

MIL-W-5086A—Type II— AN-10 thru AN-0000—Single conductor stranded tinned copper, white polyvinylchloride insulation, white glass braid, flame retardant nylon lacquered nylon braid overall.

CHARACTERISTICS: Temperature rating: −55°C. to +105°C. Voltage rating: 600 volts. Resists effects of water, oil, aircraft fuels, hydraulic fluid, skydral, ethyleneglycol, alcohol, dilute acids, alkalis, fungus and abrasion.

CONTROL AND INSTRUMENTATION CABLE

MULTI-CONDUCTOR SHIELDED PLASTIC JACKET PER MIL-W-16878D

DESCRIPTION: Each conductor stranded tinned copper. Color coded, polyvinylchloride insulation, cabled, mylar wrap. Braided tinned copper shield 90% coverage, chrome gray polyvinylchloride jacket overall.

CHARACTERISTICS: Temperature rating −55°C to +105°C. Resistant to acids, alkalis, oil, flame, moisture, solvents and fungus.

APPLICATIONS: Interconnecting cables for electronic equipment, instrumentation and control cable, telemetry data, remote control of sensitive recording instruments.

HEAVY-DUTY MULTI-CONDUCTOR RUGGED NEOPRENE JACKET—600 VOLTS

DESCRIPTION: Each conductor stranded bare copper, color coded rubber insulation, cabled with fillers where necessary, wrap over conductors, heavy duty black neoprene jacket overall. 600 volt operating voltage.

APPLICATIONS: Remote control of automatic electrical equipment and sub-stations, telemetering, voltage pressure and motor control, signal transmission. Flexible heavy duty neoprene jacketed cable, recommended for outside installation, cable resists oil, ozone, sunlight, moisture, abrasion and impact.

Telemetering & Supervisory Shielded Control Cable

DESCRIPTION: Each conductor bare solid copper, high molecular weight polyethylene insulation, color coded, twisted into pairs, cabled with a non-hygroscopic binder tape .008" aluminum shield, black polyethylene jacket overall. Operating voltage 300 volts.

Double jacketed types, (3903 - 4060 below) same except for additional inner black polyethylene jacket over binder, and .005" copper shield.

APPLICATIONS: Remote control of rocket recording data and test-firing control, transmission of signals which telemeter temperature, voltage pressure, etc. control of multiple circuits, measuring devices, quality control equipment, radar antenna. For aerial, duct and conduit installations.

Double jacketed types have higher dielectric strength and suited for direct burial installations.

Shielded Control Cable

GENERAL PURPOSE MULTI-CONDUCTOR RUBBER INSULATED AND RUBBER JACKET

DESCRIPTION: Each conductor, stranded tinned copper, color coded rubber insulation, cabled with fillers where necessary, cotton wrap, braided tinned copper shield, cotton wrap, tough black rubber jacket overall.

CHARACTERISTICS: Suggested Operating Temperature: −20°C to +60°C.

APPLICATIONS: Cables are extremely flexible for control circuits, video and audio interconnecting cable, broadcast and heavy duty studio use.

Flat Ribbon Cable

MULTI-CONDUCTOR — PLASTIC INSULATION
CONDUCTORS PER MIL-W-16878D, Type C

DESCRIPTION: Each conductor stranded tinned copper, color coded .016" polyvinyl-chloride insulation, conductors bonded together to form flat ribbon cable.

CHARACTERISTICS: Temperature rating −55°C to +105°C. Voltage rating 1000 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATIONS: Saves time, weight, and space on circuit connections, interconnecting assemblies and systems, wiring harnesses for racks, sliding drawer and drop panels. Conductors fully color coded and easily separated for neat terminations.

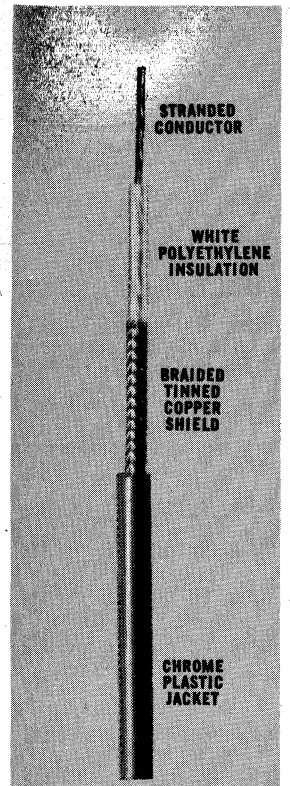
Shielded Microphone Cable



PLASTIC JACKET

DESCRIPTION: 1702-1706: Single conductor, stranded tinned copper, white polyethylene insulation, braided or spiral wrapped tinned copper shield, gray polyvinylchloride jacket overall.

1709-1712: Each conductor stranded tinned copper, color coded polyethylene insulation, cabled with fillers, textile wrap, braided or spiral wrapped tinned copper shield, gray polyvinylchloride jacket overall.

APPLICATIONS: 1702-1706: All high impedance microphones, lapel, ribbon, velocity, crystal contact, hi-fi interconnecting cables.

1709-1712: All low impedance microphones—carbon, condenser, dynamic.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C.

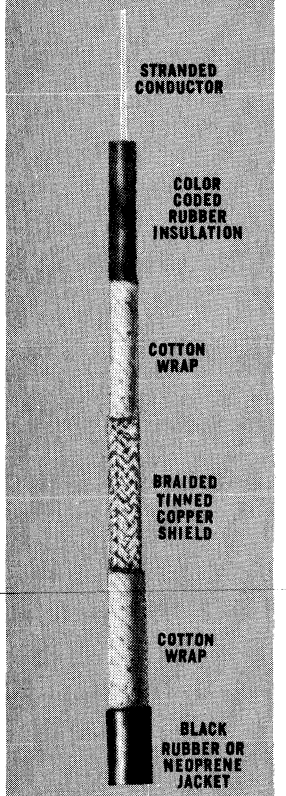
RUBBER AND NEOPRENE JACKETS



DESCRIPTION: Each conductor stranded tinned copper, color coded rubber insulation, cotton wrap, braided tinned copper shield, cotton wrap, tough black rubber or neoprene jacket overall.

APPLICATIONS: 1248-1449: All high impedance microphone, broadcast and heavy duty studio use, communication and audio systems.

1250-1450/16: All low impedance microphone, broadcast and heavy duty studio use. Can also be used for control circuits, video and audio interconnection cable, and as electronic power cables.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C.

Rubber jacketed cable suited for standard duty indoor use.

Neoprene jacketed cable suited for heavy duty outdoor use and direct burial. Will resist oil, acid, sunlight, ageing and abrasion.

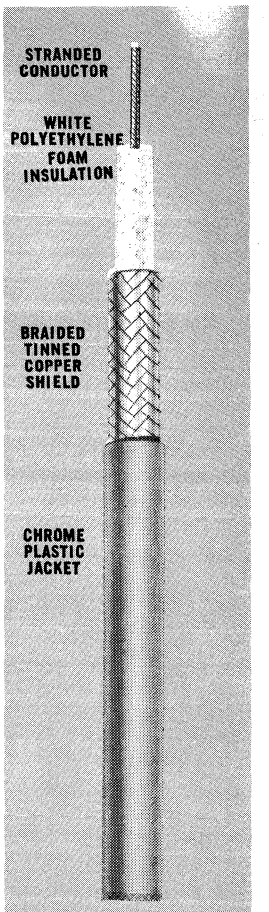
Low Capacitance Shielded Microphone Cable

CELLULAR FOAM POLYETHYLENE INSULATION — PLASTIC JACKET



DESCRIPTION: Single conductor, stranded tinned copper, white foam polyethylene insulation, braided tinned copper shield, chrome gray polyvinylchloride jacket.

Two conductors, stranded tinned copper, color coded foam polyethylene insulation, 1 white and 1 black, cabled with fillers, textile wrap, braided tinned copper shield, chrome gray polyvinylchloride jacket.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C. Low loss foam polyethylene provides lower capacitance and attenuation than standard solid polyethylene microphone cables, thereby increasing the effective length of usable cable without loss of signal.

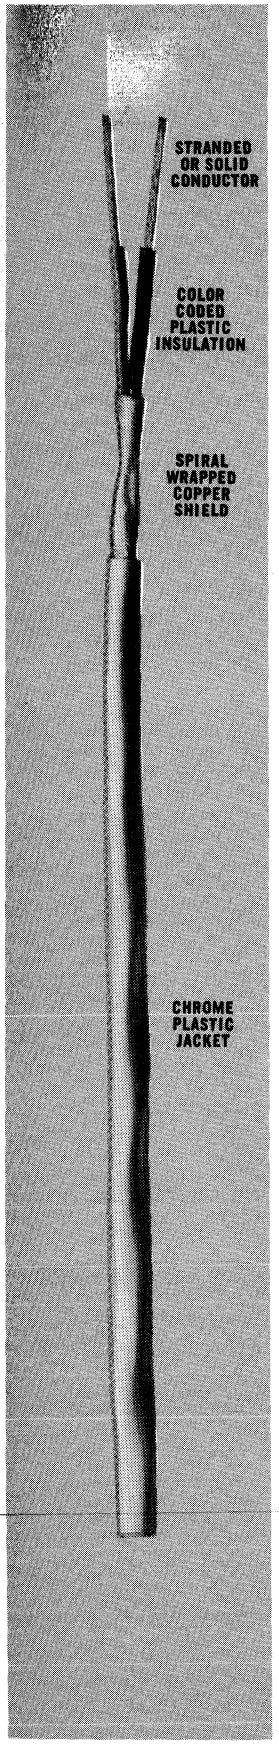
SPIRAL WRAPPED COPPER SHIELD



DESCRIPTION: Each conductor stranded or solid tinned copper, color coded polyvinylchloride insulation, conductors twisted, spiral wrapped copper shield, gray polyvinylchloride jacket overall. **Nominal jacket thickness .020".**

CHARACTERISTICS: Use of spiral shield makes pigtailing off extremely simple and fast. Excellent for production line work. Provides close to 100% shielded coverage for audio and RF frequencies. Suggested operating temperature: −20°C to +60°C.

Shielded Plastic Jacketed Cable

BRAIDED COPPER SHIELD

DESCRIPTION: Each conductor tinned copper, color coded polyvinylchloride insulation, conductors twisted, braided copper shield, gray polyvinylchloride jacket overall. Suitable for outdoor installations.

CHARACTERISTICS: A conventional type of braided shield providing approximately 75% coverage is particularly desirable where flexibility is required. The copper shield allows ease of pigtail soldering. Shield construction provides additional cable strength. Operating temperature: −20°C to +60°C. **Nominal jacket thickness .020".**

APPLICATIONS: For public address and sound systems, ideal for recording studios, amateur radio transmitters, shielded power or electronic circuits, wherever an economical shielded cable is required.

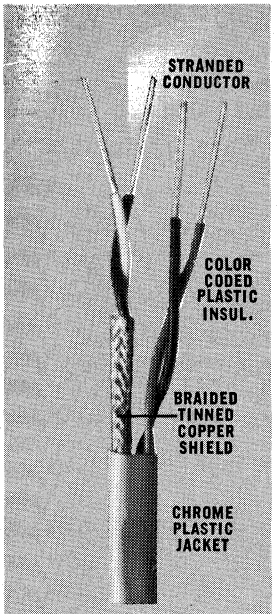
Plastic Intercom Cable



DESCRIPTION: Each conductor stranded tinned copper, color coded polyvinylchloride insulation, braided tinned copper shield (See Chart) over one, two, or three conductors, remaining conductors unshielded and paired, chrome polyvinylchloride jacket overall.

APPLICATIONS: General wiring from station to station where shielded conductor(s) is essential to eliminate cross talk.
1243 Recommended for unbalanced system with remote "break-in."
1243/4: Recommended for balanced systems.
1243/5: Recommended for coin operated phonographs.
1243/P: Recommended for circuits requiring complete isolation.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C. Suggested operating voltage: 350 volts.

Shielded Audio & Data Cable

INDIVIDUALLY SHIELDED MULTIPLE PAIRS — PLASTIC JACKET

DESCRIPTION: Each conductor, tinned copper, color coded, high density polyethylene, conductors twisted into pairs. 22 gauge tinned copper drain wire. Mylar-supported aluminum foil shield, aluminum facing inward. Chrome Grey PVC jacket overall.

NEW

CHARACTERISTICS: Mutual conductance between conductors of a pair, 25 pf/ft. Capacitance of a single conductor to shield, 45 pf/ft.

APPLICATIONS: For audio, R.F. and pulse applications requiring superior circuit isolation.

Shielded Plastic Jacketed Cable

MYLAR SUPPORTED ALUMINUM FOIL SHIELD

DESCRIPTION: Each conductor stranded tinned copper, color coded polyethylene insulation, conductors cabled, wrapped mylar supported aluminum foil shield, 100% coverage with drain wire laid parallel, aluminum foil facing outward to provide maximum ground, gray pvc jacket overall.

CHARACTERISTICS: Operating temperature: −20°C to +60°C. Operating voltage: 400 volts. Light weight, reduces cable diameter, and provides 100% shield coverage.

Hi-Fi and Stereo Interconnecting Cable Phono Wire

DESCRIPTION

1332 and 1200: Single conductor stranded tinned copper, white polyvinylchloride insulation, fine braided tinned copper shield overall.

1201: Same as No. 1200 plus brown cotton braid over shield.

1115 and 1116: Each conductor stranded tinned copper, color coded polyvinylchloride insulation, conductors twisted.

1100-1110: Each conductor stranded tinned copper, color coded polyvinylchloride insulation, conductors twisted with an extra tight lay for flexibility. When shielded the overall shield has been specially designed for extreme limpness so as not to impede the movement of the phono arm when tracking.

CHARACTERISTICS: Suggested Operating Temperature: −55°C to +105°C.

RETRACTILE COIL CORDS

POWER CORDS—NEOPRENE JACKET U.L. APPROVED

RETRACTED LENGTHS 2 & 4 FEET—EXTENDED LENGTHS 12 & 25 FEET

DESCRIPTION: Long-lasting service is assured with this quality multi-conductor power cord. Each conductor is stranded copper, with rubber installation, and a rugged weather and oil resistant neoprene jacket overall.

APPLICATION: Used on electric tools, portable drills, soldering wires, electrical appliances, household appliances, etc., to eliminate loose hanging wires and to prevent wires from tangling and twisting.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C.

*If all four conductors normally carry current, amp rating is as shown. If one lead is used as a ground, amp rating is the same as 2 and 3 conductor cords.

†A 12″ retracted length with a 12″ straight lead on each end for easy stripping and termination. Cord extends to approximately 6 feet.

RETRACTILE TEST LEAD WIRE

RETRACTED LENGTH 12″—EXTENDED LENGTH 6 FEET

DESCRIPTION: A high grade quality rubber insulation for maximum flex life extruded over a single conductor of extra flexible tinned copper which gives long life to this retractile test lead wire. Available in a 12″ retracted length with a 6″ straight lead on each end, the cord extends to approximately 6 feet.

RETRACTILE COIL CORDS

RETRACTILE COMMUNICATION COIL CORDS

RETRACTED LENGTHS 2 & 4 FEET—EXTENDED LENGTHS 12 & 25 FEET

DESCRIPTION: Multi-conductor communication cord manufactured with extra flexible #23 AWG-21/36 tinned soft cadmium copper for maximum flex life. Insulated with rubber for communication circuits of maximum 120 working volts. The overall jacket is a specially compounded cured neoprene jacket giving long life to the retractile cord.

APPLICATION: Used in communication equipment, such as telephone car carriers, mobile radio equipment, ham operations, head sets, citizen band units and radio transmitter to receiver head sets, communication cords eliminate hazards and inconveniences caused by tangled straight cords.

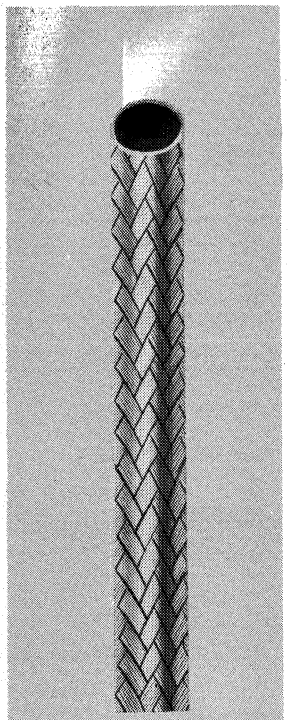
Tinned Copper Tubular Braid To MIL Spec QQ-B-575



DESCRIPTION: A woven tinned copper braid which is manufactured completely round as outlined in Mil Spec QQ-B-575. Each strand of the braid is soft drawn tinned copper wire. The braid is self-supporting and maintains its round configuration. The percentage of shielding coverage is 95% or more when placed over a mandrel of an equivalent diameter to the inside braid diameter.

High Voltage Wire

DESCRIPTION: Single conductor, stranded tinned copper, white flame retardant polyethylene insulation. When shielded, braided tinned copper shield overall.

APPLICATIONS: Designed for use as high-voltage leads in electronic equipment, especially for cathode ray tubes in television receivers and oscilloscopes. Shielded type used to minimize RF radiation in transmitters, X-ray, and diathermy equipment.

CATV Foam 75 OHM Triaxial Feeder Cable

DOUBLE SHIELD — DOUBLE JACKET — FOAM RG 11/U TYPE

This cable has been specially designed for use as a secondary distribution lead-in cable for community antenna television systems.
The double shield construction provides maximum attenuation of radiated signals and allows for a minimum of cross-cable interference and pickup.
Cable construction consists of a solid bare copper conductor, foamed polyethylene dielectric, braided copper shield, covered by an inner polyethylene jacket, and a second braided copper shield with a polyethylene jacket overall.
The outer jacket offers high resistance to sunlight, weathering, and resists attack by acid, alkalis, oil, and grease.

CATV Foam 75 OHM Coaxial Feeder Cable

SINGLE SHIELD — SINGLE JACKET — FOAM RG 11/U TYPE

A high quality foam core feeder cable with non-peaking attenuation characteristics. This foam core cable is widely used as secondary distribution lead-in cable. Cable has a solid bare copper conductor, foam polyethylene dielectric, braided copper shield with a weather proof polyethylene jacket overall. A tough, long lasting cable that is relatively light weight, flexible and easy to install.

CATV Foam 75 OHM Drop Cable

FOAM RG 59/U TYPE — WITH AND WITHOUT MESSENGER

A low-loss, light weight cable with wide use as subscriber tap-off lead-in cable. Cable contains a bare copper conductor, foam polyethylene dielectric, braided copper shield with a black polyethylene jacket overall. Jacket withstands effect of weathering and sunlight and is resistant to attack by acid, alkali, oil, and grease.
Alpha No. 9606M has, in addition, a built-in #14 gauge steel wire messenger in a "figure eight" construction.

75 OHM Foam TV and FM Coaxial Cable

FOAM RG 59/U TYPE LOW LOSS—MAXIMUM SIGNAL STRENGTH

Foam core coaxial cable delivers maximum low-loss performance for any TV or FM antenna system. This cable, while providing superior signal for black and white TV, is especially recommended for color TV installations.

Coaxial cable maintains a constant impedance match, eliminates ghosts and color smears, will not pick up interference and gives optimum signal in all types of weather.

The cable contains a solid bare copper conductor, foam polyethylene insulation, braided copper shield and a heavy duty black polyethylene jacket.

75 OHM Solid Core TV and FM Coaxial Cable

RG 59/U TYPE
MAXIMUM SIGNAL STRENGTH — EXTENDED OPERATING LIFE

Coaxial cable is recommended by many leading antenna manufacturers for optimum black and white and color reception. Ghosts, color smears, and noise are eliminated by use of coaxial cable and effective operating life is many times that of ordinary flat line wire. Many TV sets and antennas are now manufactured for use with 75 ohm cable and inexpensive matching transformers may be used in older sets designed for 300 ohm line.

Construction consists of a copper coated steel conductor, polyethylene dielectric, braided copper shield and a grey or black PVC jacket overall.

50 OHM Amateur Radio and CB Coaxial Cables

FOAM RG 8/U TYPE — SOLID RG 58/U TYPE

Signal loss between transmitter and antenna is minimized by the use of these specially designed coaxial cable types. In addition, the ability of these cables to shield out stray radiation fields makes them the preferred broadcast transmission cables.

Foam core cable consists of a stranded bare copper conductor, foam polyethylene dielectric, braided copper shield, and a black PVC jacket.

The solid core cable contains a solid bare copper conductor, solid polyethylene dielectric braided copper shield with a black PVC jacket overall.

Jackets resist effects of weathering and sunlight and heavy abrasion.

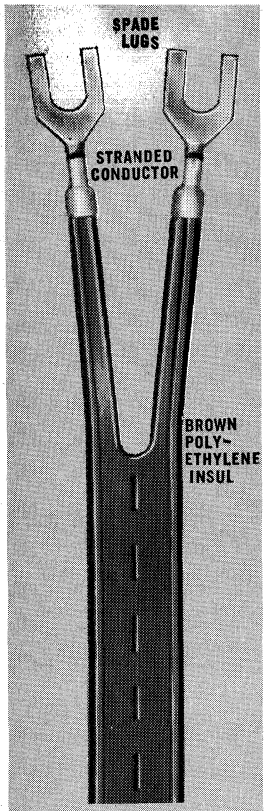
Twin Lead TV Cable

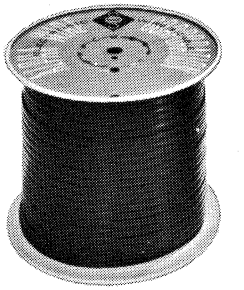
NEW

MANUFACTURED TO RIGID OPERATING SPECIFICATIONS



DESCRIPTION: Three basic types, each designed to achieve maximum signal performance in any climate and under the most severe weather conditions. Each conductor stranded bare copper, laid parallel, brown polyethylene jacket.

CHARACTERISTICS: Maximum Operating Temperature — +220°F
Water Absorption after 24 hours immersion — .001%
Resistance to Acid — Excellent
Resistance to Salt Spray — Excellent
Stress-Crack Resistance — Excellent
Hardness of Plastic — Durometer C-73
Impedance — 300 ohms
Maximum Attenuation per 100′ — .85 db @ 50mc
1.1 db @ 100mc
1.7 db @ 200mc
Dielectric Constant of Insulation (50-110mc) — 2.75
Dissipation Factor (50-110mc) — .0005
Capacity between Conductors — 4.4 mfd per ft.



APPLICATIONS: No. 5150 — The ideal TV cable for average operating conditions
No. 5152 — Heavy duty, climate-resistant
No. 5153 — Extra-Strong, climate-resistant (Resists wind-whipping) (Recommended for antenna-mounted amplifiers.)

ALPHLEX® ZIPPER TUBING

DESCRIPTION Alphlex Zipper Tubing is the all purpose modern way to harness, cover and protect cables. Just zip to close — and zip to reopen. If you wish, it may be permanently sealed with PB-200 Special Compound Liquid Sealer. Alphlex Zipper Tubing is strong, flexible, durable, and offers new freedom in design, production and repair.

APPLICATIONS To shield, to harness wire, to custom-cable to any length, to enclose, to encase, to identify (such as cable markers), to protect, to replace worn jackets.

Alphlex® Polyvinylchloride Plastic Tubing (PVC-105)

CONFORMS TO MIL-I-631D †

DESCRIPTION: The superior mechanical, thermal, and electrical properties of Alphlex PVC-105, coupled with its economical cost have led to an ever increasing use of this all-purpose insulating material. Another major advantage of Alphlex PVC-105 is its high degree of flexibility, which is maintained even under severe environmental conditions.

Rated for temperatures as high as 105°C, PVC-105 has a high dielectric strength that remains unaffected by increasing temperature throughout its range. PVC-105 maintains a high resistance to the agents of heat, oil, chemical corrosion and fungi with no loss in tensile strength, or flexibility. Other features include an exceptional resistance to abrasion and indefinite shelf life.

Alphlex PVC-105 is compounded with first quality, non-migratory resinous type plasticizers. Carefully selected stabilizers and modifiers added in the manufacturing process, counteract chemical and environmental degradation. Under adverse conditions Alphlex PVC-105 retains its flexibility which permits it to cling to and protect irregular shapes. An unusually simple to handle insulating material, PVC-105 "snakes" well under all environmental conditions.

APPLICATIONS: Designed and manufactured for general electronic, aircraft and electrical applications involving temperatures as high as 105°C. Especially useful to protect wires and cables subject to abrasion or where a flexible tubing with a high degree of resistivity to oil, chemicals or solvents is necessary.

Alphlex® Teflon Extruded Tubing

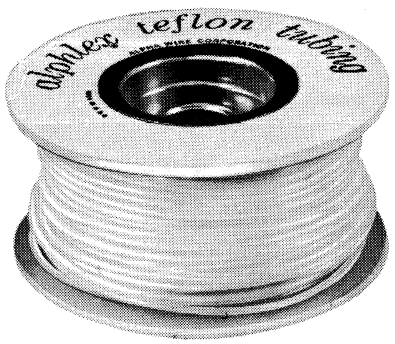
CONFORMS TO MIL-I-22129B

DESCRIPTION: Alphlex Teflon Tubing is unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures. Teflon is rated for continuous operation at 250°C, and retains an exceptional toughness and its flexibility throughout its temperature range.

Alphlex Teflon Tubing has the further advantage of a high degree of resistance to flexural fatigue and repetitive stresses; coefficient of friction lower than that of any other known solid; and a dielectric constant and power factor lower than that of any other known solid. This tubing will not crack or become brittle during aging.

Because of its resistance to soldering iron temperature, Alphlex Teflon Tubing will not shrink back during the soldering process. Alphlex Teflon Tubing will not melt and flow as do conventional thermoplastic materials. At high frequencies, its dielectric strength is many times that of other insulating materials.

Alphlex Teflon Tubing is chemically inert, has zero moisture absorption and its insulation resistance properties are unaffected by heat aging or temperature use up to 250°c.



APPLICATIONS: A thin flexible insulation, Alphlex Teflon Tubing permits a miniaturization and compactness of design never before possible. Invaluable in any application where a high heat resistant, flexible, non-flammable, chemical solvent and corrosion-resistant material is required.

Irradiated Polyolefin Tubing

NEW

NEW ALL-PURPOSE SHRINKABLE TUBING — FIT-221

- **SHRINKS 50% (2:1 RATIO) WITH ONLY 5% LONGITUDINAL SHRINKAGE**
- **FEWER SIZES COVERING MORE APPLICATIONS**

DESCRIPTION: Alphlex FIT-221 Shrinkable Tubing, when heated, forms a tight-mechanical bond, even over irregularly shaped materials. FIT-221 is available in a range of colors and in clear.

FIT-221 is an all-purpose polyolefin extruded tubing that is simple to use and provides a tight mechanical bond. FIT-221 is an irradiated, thermally stable, modified polyolefin base product. FIT-221 Clear may be used so that jacketed, printed components or cable data is clearly visible and inspection of insulated components, cables or terminations is simplified.

The tubing is supplied in an expanded form and easily slips over the object to be covered. When a temperature of approximately 275°F (135°C) is applied, it immediately returns to its predetermined size (approximately one-half smaller) and forms a permanent tight-fitting mechanical bond. FIT-221 Tubing will not cold-flow or melt but retains form stability throughout its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is 5% maximum when completely recovered.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 225°F to 255°F. Shrinkage will begin at 235°F, but at a somewhat slower rate. When using an oven, temperature may range from 235°F to 300°F. Prolonged exposure to these temperatures will not affect the physical or electrical properties of FIT-221 Shrinkable Tubing. FIT-221 Clear Tubing remains transparent over its entire operating range of −55°C to 135°C.

FLAMMABILITY: Although FIT-221 Clear is a high temperature material, it is flammable and will burn. However, when the tubing is shrunk over non-flammable or flame-resistant components, such as connectors, terminals and wire, the entire assembly will not support combustion.

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

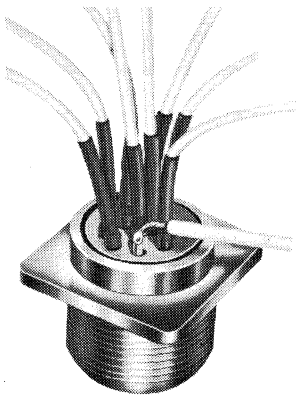
Irradiated Polyolefin Semi-Rigid Tubing FIT-295

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

FOR MAXIMUM STRENGTH AT ALL STRESS POINTS

SHRINKAGE RATIO 2:1 (50% Shrinkage)



DESCRIPTION: Alphlex FIT-295 Shrinkable Tubing is designed to provide maximum mechanical strength at stress or connection points. An extremely strong, heavy wall, abrasion-resistant, extruded tubing FIT-295 is supplied in expanded form and easily slips over the object to be covered.

When a temperature of approximately 275°F (135°C) is applied, Alphlex FIT-295 immediately returns to its predetermined size (approximately ½ smaller) and forms a permanent tight-fitting mechanical bond. FIT-295 will not cold-flow or melt but retains form stability throughout its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is less than 5% when completely recovered.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 275°F to 300°F. When using an oven, temperature may range from 235°F to 300°F. Prolonged exposure to these temperatures will not affect the physical or electrical properties of FIT-295 Tubing.

FLAMMABILITY: Although FIT-295, Clear, is a high temperature material, it is flammable and will burn. However, when the tubing is shrunk over non-flammable or flame-resistant components, such as connectors, terminals and wires, the entire assembly will not support combustion.

Irradiated Polyvinylchloride Tubing FIT-105

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

HIGHLY FLEXIBLE — IDEAL FOR CABLE JACKETING

Conforms to MIL-1-631D, Type F, Form U, Grade C, Class 1, Cat. 1

SHRINKAGE RATIO 2:1 (50% Shrinkage)

DESCRIPTION: Alphlex FIT-105 is an easy-to-use modified polyvinylchloride that provides a snug, extremely flexible insulation.

Because of its flexibility, strength and its ability to shrink 50% on application of heat, FIT-105 is ideally suited for insulating components and cables with a wide variation in shape and diameter.

Because of the 50% expanded diameter of FIT-105 Tubing, it is an extremely useful cable jacketing material. Cable cores may be pulled through FIT-105 Tubing with comparative ease and shrunk down to form a jacket with all the qualities of the finest extruded plastic jackets.

The tubing is supplied in expanded form and in continuous lengths. When a temperature of approximately 347°F (175°C) is applied, Alphlex FIT-105 Tubing immediately returns to its predetermined size (approximately 50% smaller), and forms a permanent, tight-fitting mechanical bond. FIT-105 Tubing will not cold-flow or melt but retains form stability within its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is less than 10%.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 325°F, or above. When using an oven, temperature may range from 325°F to 350°F.

Irradiated Kynar* Tubing FIT-350

NEW

FIT® SHRINKABLE TUBING

HIGH TEMPERATURE TUBING

A tough, thin wall tubing with outstanding cut-through and abrasion resistance. Semi-rigid polyvinylidene fluoride.

10 sizes cover complete range of .032 — 1 inch

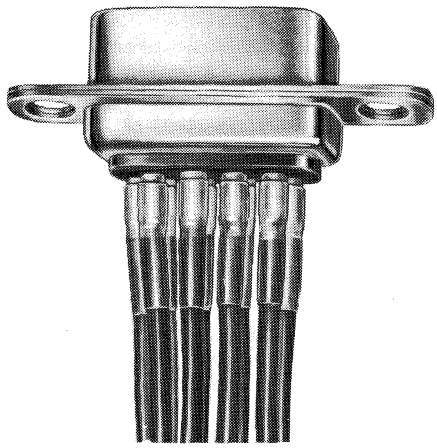
Clear and non-flammable

All FIT-350 Tubing available from stock and may be cut and/or marked to your specifications.

SHRINKAGE RATIO 2:1 (50% Shrinkage)

DESCRIPTION: Alphlex FIT-350 is a new shrinkable tubing with outstanding temperature and physical characteristics and high dielectric **strength. Longitudinal shrinkage is only 5%.**

FIT-350 is an extremely tough extruded tubing that can be repeatedly flexed, bent, or twisted without loss of its mechanical or electrical strength. Supplied as a clear tubing, FIT-350 may be used where inspection or identification of the item covered is necessary.



When a temperature of approximately 347°F. (175°C.) is applied, the tubing immediately returns to its predetermined size (approximately one-half smaller) and forms a permanent, tough mechanical bond.

FIT-350 will never cold flow or melt and will not split when shrunk over sharp or irregularly shaped objects.

FIT-350 is non-flammable and will operate continuously at temperatures from −55°C to +175°C. It will withstand intermittent heat shock at temperatures up to 350°C.

Compared with other fluorocarbon tubing types, FIT-350 has markedly superior abrasion, cut-through, and cold flow properties.

SHRINKING METHODS: The use of a hot air gun (Alpha HG-1) is recommended as being generally the easiest heating method. However, excellent results may be achieved by the use of an oven, radiant heat, dipping in hot liquids, or heating with a soldering iron, burner, or even the flame of a match.

* New Item ‡ New Put-Up † Specify Color (Obs) Obsolete

ALL SPOOLS ARE ONE PIECE EXACT LENGTH. (EXCEPT SPOOLS WITH (•) FOOTNOTE)

• Spools may contain more than one piece, minimum length of any one piece is 25 ft.

When priced per M ft. length may vary ±10% from length shown; all other lengths are exact.

§ Cut to Customer's Specified Length subject to available stock lengths—minimum length 25′; 25′ to 199′, plus 25′, minus 0; 200′ or over, plus 50′, minus 0.

▲ (Teflon Hook-up Wire) Prices apply to any striped color combination in quantities of 1000′ or more. Minimum order 1000′ per stripe color combination on 500′ and 1000′ spools only. Striping adders do not apply to braided tracers—Write for prices on non-stock tracer colors.

¶ (Vinyl Hook-up Wire) Prices apply to standard stock colors as listed in our current catalog and to non-stock striped colors over stock solid colors in quantities of 10,000′ or more. Non-stock striped colors over stock solid colors in quantities of 1000′ to 9999′, add pro-rata set-up charge of $4.50 per color combination. Minimum order 1000′ per special stripe combination. Special stripe colors in any quantity will be subject to 2 piece put-up and plus or minus 10% per spool.

#22 tinned copper, vinyl insulated, cabled in pairs, each pair and its ground wire under BELDFOIL aluminum-Mylar shield, over-all chrome vinyl jacket. 300 Volts suggested working voltage.

Insulation resistance between shields	*100 megohms/M'*
Capacitance between adjacent shields	*115 mmf/ft*
Voltage breakdown between adjacent shields	*1500 volts*
Working voltage between adjacent shields	*50 volts*

Vinyl insulation is used for ease of stripping and soldering. Recommended for audio frequency applications requiring excellent circuit isolation. Maximum operating temperature 80°C.

#22 gauge tinned copper, polypropylene insulated, cabled in pairs, each pair and its ground wire under "Z" fold BELDFOIL aluminum-Mylar shield, over-all chrome vinyl jacket. 300 volts suggested working voltage.

Insulation resistance between shields	*100 megohms/M'*
Capacitance between adjacent shields	*115 mmf/ft*
Voltage breakdown between adjacent shields	*1500 volts*
Working voltage between adjacent shields	*50 volts*

Recommended for audio, pulse, and radio frequency applications requiring superior circuit isolation. Polypropylene insulation is used for excellent high frequency properties and mechanical toughness. Maximum operating temperature 105 C.

Belden | unshielded paired sound cables

MULTIPLE PAIR UNSHIELDED SOUND CABLES

TYPICAL APPLICATIONS: Balanced line sound systems.

Made with 80 C vinyl plastic compounds for high dielectric strength and the best physical properties, such as free stripping, small diameter, and tear resistance. It also resists the effects of water, sun, oil, grease, and ozone. The conductors are paired with a short-lay twist for conductor balance, providing a quiet circuit, free from cross talk.

ALL CONSTRUCTIONS:
Tinned copper, vinyl insulated cabled in pairs, chrome vinyl jacket.

RUBBER—PLASTIC—NEOPRENE

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.
RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.
NEOPRENE CABLES RECOMMENDED FOR: Outside use, cold weather applications. Resistant to effects of sun, oil, and ozone.

**Capacitance between conductors.* ***Capacitance between 1 conductor and remaining conductors (if any) connected to shield.*

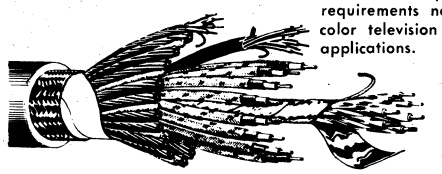
Belden | tv camera cable and 75 ohm video cables

TV CAMERA CABLES

Belden TV Broadcasting and closed circuit TV Camera Cables are precision engineered to assure reliable performance and long service life. In addition to lighter weight, greater flexibility, and easier termination these cables are designed to maintain high conductor insulation resistance regardless of changes in ambient temperatures.

Trade number 8283

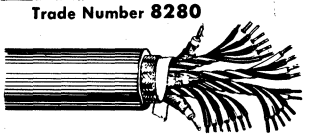


Designed to meet the critical electrical and physical requirements necessary for color television broadcast applications.

82 Conductor TV Color Camera Cable

4-14 AWG (19x27) tinned copper, vinyl plastic insulated, color coded.
3-16 AWG (26x30) tinned copper, vinyl plastic insulated, color coded.
BELDFOIL aluminum-Mylar wrapped shield around the above 7 conductors cabled with stranded tinned copper drain wire.
8 coaxial cables. Nom. impedance 53.5 ohms, color coded.
67-22 AWG (7x30) tinned copper, vinyl plastic insulated, color coded, 7 under conductive textile shield with stranded ground wire.
Tinned copper braid shield.
Chrome vinyl plastic jacket. 1.22" Nom. O.D.
§Cut to customer's specified length.
Maximum length 1000'.

Trade Number 8280

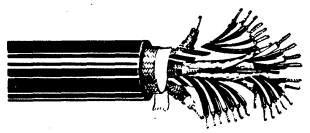


A smaller, lighter weight cable designed to make long runs easier. For black and white (Monochrome) systems.

28 Conductor TV Camera Cable

4-18 AWG (16x30) tinned copper, vinyl insulated, color coded.
21-22 AWG (7x30) tinned copper, vinyl insulated, cabled in 3 groups of 7, color coded.
3 coaxial cables. Nom. impedance 51 ohms, color coded.
Tinned copper braid shield.
Chrome vinyl jacket. .750" Nom. O.D.
§Cut to customer's specified length.
Maximum length 1500'.

Trade Number NEW 8286

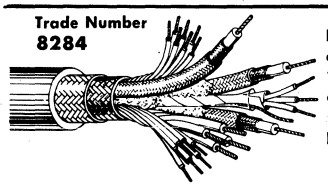


A 75 ohm cable designed to remain flexible in cold weather. Recommended for transistorized TV cameras.

NEW 28 Conductor Hypalon ♦ TV Camera Cable

4-18 AWG (16x30) tinned copper, vinyl insulated, color coded.
BELDFOIL aluminum-Mylar wrapped shield around 4 conductors with stranded drain wire, Mylar tape over this shielded group.
21-22 AWG (7x30) tinned copper, vinyl insulated, cabled in 3 groups of 7, color coded, one group of 7 has a BELDFOIL aluminum-Mylar wrapped shield overall with a stranded drain wire, Mylar tape over this shielded group.
3 coaxial cables. Nom. impedance 75 ohms.
Tinned copper braid shield.
Black Hypalon jacket. .730" O.D.
§Cut to customer's specified length.
Maximum length 1000'.

Trade Number 8284

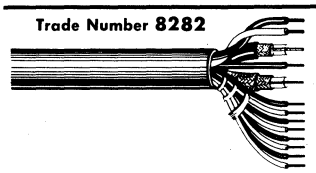


Designed specifically for color TV transmission. This cable incorporates circuit isolation assuring the reduction in AC hum level and cross talk essential for color TV broadcasting.

24 Conductor TV Camera Cable

17-22 AWG (7x30) tinned copper, vinyl insulated, color coded.
3 under BELDFOIL shield with stranded drain wire.
4-16 AWG (26x30) tinned copper, vinyl insulated, color coded.
3 coaxial cables. Nom. impedance 53.5 ohms, color coded.
Tinned copper braid shield.
Heavy cotton braid.
Chrome vinyl plastic jacket. .800" Nom. O.D.
§Cut to customer's specified length.
Maximum length 1000'.

Trade Number 8282



Especially engineered for TV Eye Cameras. Recommended for remote control, monitor and cue line applications.

13 Conductor TV Eye Cable

9-22 AWG (7x30) tinned copper, vinyl insulated, color coded.
2-18 AWG (16x30) tinned stranded copper conductor vinyl insulated. Black and Red.
1-RG-58A/U cable 50-ohm coax.
1-72-ohm coax, stranded conductor, Mylar tape wrapped.
Chrome vinyl jacket. .470" Nom. O.D.
§Cut to customer's specified length.
Maximum length 2000'.

This series of cables is also recommended as interconnecting cables in complex electronic applications. Each cable contains coaxial cables for RF and Video signals, pulse voltages or high voltage lines as well as many conductor groups for control and power circuits.

§Minimum length 25'. 25' to 199', plus 25', minus 0. 200' or over, plus 50, minus 0. ♦Dupont Trademark

75 OHM PRECISION VIDEO CABLE

TYPICAL APPLICATIONS: Video signal transmission in Color and Monochrome TV studios. Provides high quality carrier of video signal with superior picture definition and eliminates problems of periodicity. Cable is manufactured with rigid control of concentricity and all dimensional tolerances. The black polyethylene jacket is manufactured with a non-contaminating, non-migratory compound. 100% SWEEP TESTED.

Compacted conductor, polyethylene insulated, tinned copper braid shield, black polyethylene jacket. Fits RG 59/U connectors.
Compacted conductor combines impedance uniformity of solid conductor and "nick-resistance" of stranded conductor.

For Use on 8281 Only

8299 Adapter for use with PL-259 connector. 25 in a box.

PERMOHM Encapsulated twin lead for strong, clear signals on all channels despite salt spray, industrial contamination, rain, ice and fringe area reception. An excellent color, UHF or VHF cable. **First choice for all weather, all channel T.V. reception**								
Celluline★★ 8275 *Copperweld; 2 conductors parallel, polyethylene jacket with inert gas filled unicellular polyethylene core.*	20 (7x28)	Brown	.300 x .400	80%	4.6	100 200 300 400 500 700 900	1.05 1.64 2.12 2.5 2.98 3.62 4.3	50, 75, 100 coils in counter dispenser 250, 500 1000 spools
CELLULINE Maintains uniform electrical characteristics by eliminating all possible moisture between conductors. Installation is easier as no end-sealing is necessary. Losses are lower because of its lower dielectric constant (1.5). *The thick outer wall of brown polyethylene protects the cable from abrasion and sun damage, and the round shape offers less wind resistance. The result is a longer lasting, more efficient line which helps maintain a strong UHF or VHF reception for black and white or color.*

RG/U COAXIAL CABLES

Belden's RG/U cables are manufactured and laboratory tested in accordance with existing military specifications. These cables combine low capacitance and low attenuation. The virgin polyethylene insulation assures constant electrical characteristics regardless of changes in frequency or temperature.

A variety of available jacket types include abrasion resistant polyethylene, polyvinylchloride (recommended for chemical and weather resistance) and a special non-contaminating vinyl compounded for applications above 3000 megacycles.

Typical applications: Flexible test leads, patch cords and high voltage leads (consult applicable Mil Spec for dielectric rating of individual RG/U types). Excellent for audio applications.

Note: Maximum temperature rating of polyethylene is 80°C (176°F). The polyethylene insulation begins to soften above this temperature.

SWEEP TESTING

For satisfactory transmission of a signal through a cable at any frequency, Belden Sweep Tests every length of its Community TV Cables at all channels in the VHF Frequency range on an oscilloscope.

Sweep Testing, performed by trained technicians using the most modern equipment, prevents unsatisfactory program reception due to imperfections in the cable acting as "Filter Traps" at some frequencies.

The black polyethylene jackets on Belden numbers 8211, 8212, 8213, 8215, 8232, and 8233 are manufactured with a noncontaminating, nonmigratory compound specially formulated for superior weather resistance.

magnet wire — mobile communications cable for marine and automotive

Belden

BELDSOL Magnet Wire is a dual film insulated Magnet Wire that combines the excellent dielectric characteristics of Polyurethane and the known toughness and solvent resistance offered by an overcoat of nylon. This wire is rated by IEEE tests for 130 C usage and will solder without insulation removal at 750 F.

BELDEN POLY-THERMALEZE is a dual polyester film insulated Magnet Wire rated for 180 C usage and has exceptional ability to resist solvents and abuse in difficult windings.

AUDIO CABLE SELECTION GUIDE

The choice of appropriate audio cables for runs of varying distances depends on many factors such as amplifier voltage output and power level as well as load impedances and the percent of power loss which can be tolerated. For this reason it is not practical to provide a general chart showing the recommended wire size for all conditions. The following chart shows the maximum recommended cable runs for various wire sizes selected for commonly encountered load impedances.

Wire Size (AWG)	Maximum Length of Cable Run (Ft.)					
	Low Impedance — 10% Power Loss			High Impedance — 5% Power Loss		
	4 OHM	8 OHM	16 OHM	100 OHM	250 OHM	500 OHM
14	88	176	352	1045	2610	5220
16	55	110	220	630	1574	3150
18	35	70	140	410	1020	2050
20	22	44	88	262	655	1310
22	13	26	52	164	410	820
24	8	16	32	105	262	525

The length of cable run for a given wire size can be doubled if twice the power loss can be tolerated in the cable.

The next smaller size can be used when twice the power loss can be tolerated in the cable and the length of cable run remains the same.

To use this chart for constant voltage systems, determine the load impedance using Step 1 below. If this impedance does not appear on the chart, use Step 2 to determine the maximum length of cable run for each wire size.

STEP 1 $Z\ (\text{Load Impedance}) = \frac{E^2\ (\text{Voltage} \times \text{Voltage})}{P\ (\text{Watts})}$

STEP 2 $\text{Ft. (Max.)} = \frac{\text{Ft. (chart)} \times Z\ (\text{Load Impedance})}{Z\ (\text{chart})}$

FOR EXAMPLE Find maximum length of run for #20 AWG pair in a 70 volt, 25 watt system.

1. $Z = \frac{70 \times 70}{25} = 196$ Ohms 2. Ft. (max.) $= \frac{262 \times 196}{100} = 513$ feet

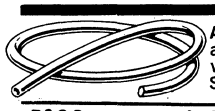
Biraco-105—EXTRUDED PLASTIC TUBING



APPROVED FOR 105°C.-OPERATION — MEETS MIL-1-631D SPECS — A quality plastic Vinyl tubing designed for electronic and electrical insulation work. Has high dielectric strength, extreme flexibility, non-flammability, abrasion resistance, impervious to oil, water, alkalies, solvents, etc., high heat stability and resistance to aging. Meets all A.S.T.M. specifications, Mil. Spec. (Type F, Form U, Grades A and C, Class 2, Category 1).

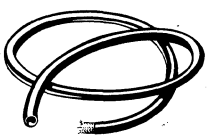
IN STOCK

The Birnbach Line of insulated sleeving and tubing is the basic quality line designed for the rigid performance requirements of the Aircraft, Electrical and Electronic Industries.

Meets or exceeds the required MIL Specifications and ASTM and NEMA standards. We invite your inquiries on special problems and requirements.

Birflex-130—VINYL COATED/FIBERGLASS SLEEVING Per MIL-I-3190B and NEMA Standards to 130° C.



(ASTM, NEMA Grade B-B-1) MEETS MIL-I-3190 SPECS. — Quality Electronic and Electrical Tubing. It is Class B Insulation that combines the best features of the inorganic fiberglass base sleeving with heat resistant, flexible plastic insulation. The plastic compound provides the highest electrical properties, heat stability (130° C.), flexibility and toughness. Meets performance requirements of specs. MIL-I-3190 A, NEMA VSI, ASTM D 372.

Birflon — TEFLON* SPAGHETTI TUBING
TFE EXTRUDED TUBING

Birflon T-500 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components. Its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures.

Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron—therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

Biraco — BIRFLON HEAT SHRINKABLE PLASTIC TUBING

BIRNBACH HEAT SHRINK POLYVINYL CHLORIDE PLASTIC TUBING
NEW ALL PURPOSE TUBING WITH CONTROLLED SHRINKAGE (2:1—50%—SHRINK RATIO)

Series SK265 covers heat shrinkable PVC polyvinyl chrolide plastic tubing. This flexible, electrical insulating tubing is extruded and its expansion is arrived at thru a patented secondary operation which builds a memory into the material. The memory is activated via the application of heat at approximately 130°C (266°F). The thinner the wall, the faster the shrinkage. The heavier the wall, the slower the shrinkage. In each case, the diameter is reduced to a predetermined size upon the application of heat and will maintain strength, insulating properties and form stability.

Material is SK265 PVC (Polyvinylchloride), flame resistant, self-extinguishing, dimensions as supplied in its expanded stage and after its recovery, with application of heat in excess of 130°C (266°F) shall be in accordance with noted table. Longitudinal shrink shall not be greater than 10%.

- NEW ALL PURPOSE TUBING — HAS CONTROLLED SHRINKAGE.
- SHRINKS IN SECONDS.
- FORMS A PERMANENT, TIGHT MECHANICAL BOND.
- PVC (POLYVINYLCHLORIDE).

TUBULAR BRAID PER MIL SPEC. QQ-B-575

Manufactured completely round as noted in MIL Spec. QQ-B-575, this tinned copper shielded braid has self-supporting characteristics which enables it to maintain its round shape. The shielding coverage percentage is 95% or more. This tubular braid is used in military applications where maximum shielding against electrostatic interference is indicated. In addition, it is used as a protective covering against mechanical abrasion and stresses for the wires, cables and other components.

HEAVY FORMVAR (HF) TYPE T2

Single conductor round bare copper, baked film insulation from a varnish based on a vinyl acetal resin. 105°C.

Has new tough abrasion resisting film. Replaces enamel and fabric insulations for certain applications requiring exceptional abrasion resistance. Stable under heat. High dielectric strength. Infinite resistance to water and moisture. Does not fail after two hours at 105°C. Takes up less winding space.

Shielding Braid, Insulated Copper Wire, Braiding

UNINSULATED COPPER WIRE

TINNED COPPER SHIELDING

Used for shielding and bonding on aircraft, marine and auto radio wires and cables. Shields speaker leads, lead-ins, amplifier wires. Extremely flexible, slides over wires and cables.

DESCRIPTION:
No. 853 thru 856/7—Composed of extremely flexible fine soft annealed copper tinned wires closely woven, braided and **Rolled Flat.**

No. 860—Composed of extremely flexible fine soft annealed copper wires closely woven, braided and **Rolled Flat.**

MIL-W-16878D — TEFLON* — HOOK-UP WIRE

MIL-W-16878D — TEFLON† WIRE

Type E—Extruded (600 Volts) — High Temperature Rating — 90° To + 250°C

Chemically inert, non-flammable, excellent flexibility, easy stripping, high dielectric strength, unaffected by fungus. Exceeds Class H insulation requirements. Unaffected by high or low temperature. Outstanding for its dependability and long life under all operating conditions indoors or outdoors. Teflon permits miniaturization and compactness in electronic designs of sub-miniature components, computers, UHF equip., slip ring assemblies, leads to hermetically sealed and potted components, telemetering equip. and guided missiles. Nom wall .010". TFE extruded.

DESCRIPTION: Single conductor silver plated copper wire concentrically stranded and insulated with extruded or Teflon insulation.

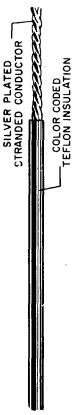
SUBMINIATURE TEFLON* HOOK-UP WIRE

Per MIL-W-16878D Type ET 250 Volts, 200°C



This new exceptionally thin miniature hook-up wire is suitable in miniature slip ring assemblies, as interconnecting wire between wafers in microminiature electronic circuitry, instrument wire, medical wire, subminiature thermo-couple lead wire, strain gauge wire, etc. Provides lighter weight, greater flexibility and hi temperature resistance. Size Nos. 32 thru 20 conform to MIL-W-16878D type ET 250 volts, 200°C.

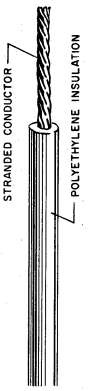
Hi-Voltage and Cathode Ray Cable



Used for 10,000, 20,000, 40,000, 60,000 volt applications as for cathode ray tubes in TV receivers, oscilloscopes and other electronic devices. Has dielectric constant of 2.7 and power factor of .002. Shielded Hi-Voltage type used to shield RF radiation in X-Ray, diathermy, medical equipment, and in transmitters.

DESCRIPTION—One conductor stranded copper tinned rulan (flame retarding type) polyethylene insulation. Available white/red tracer. Temp. Rating: 105°C

Shielded—Same as above with tinned copper braided shield overall.

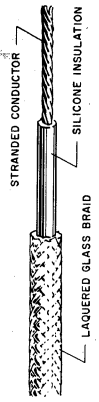
200° C — Birsil Silicone Rubber Hook-Up Lead Wire — 600 Volt



This Birsil Silicone Rubber Hook up lead wire withstands extreme temperature range and flexibility from —104°C. to +400°F. with retention of physical properties and is highly resistant to flex cracking at temperature extremes; fungus resistant; corona resistant; engineered for high-heat and hi-frequency applications; low power factor; acid-alkali-oil resistant; low dielectric constant; insulation approaching mica. Approved by U.L. but consumer must apply for Underwriter's Laboratories approval for individual product.

DESCRIPTION—One conductor, tinned copper strands, silicone rubber insulation, glass braid, lacquered. Color: White.

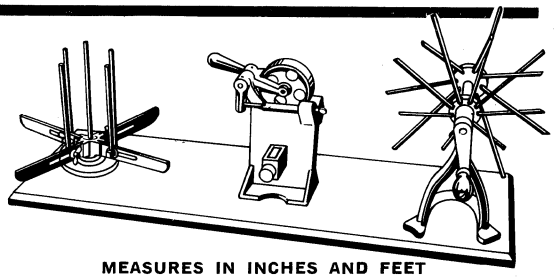
NEW—COMPLETE WIRE MEASURING OUTFIT
ACCURATE • COMPACT • NOISELESS



MEASURING MACHINE

Sturdy and compact construction. Has a precision quality built counter with large numbers for easy reading and will register wire up to .9,999 feet for direct accurate reading. Can be easily reset to zero position.

Wire passes through two rollers, the upper roller being self-adjusting and the tension of the upper roller can be set by a thumb screw to provide the proper grip for very fine as well as for heavy wire.

Two hardened lead bushings with an opening of 5/8″ diameter will guide the wire properly through the rollers. Bushings are removable to allow cables up to 1″ dia. to pass through. Will measure accurately all electric wires, cables, coaxial cables, rope, tape, etc.

WIRE WINDER

Has adjustable arms to be set to the desired coil size and the arms will open to a flat position for easy removal of the coil. Simply open thumb screw which holds the front collar tight on the shaft, push the collar in any direction to the desired position and tighten the thumb screw again.

HOLDING REEL

Compact, adjustable to size of coil and folding. Will hold spools or coils of wire.

HarnessRAP

This new spiral wrapping provides a readily flexible and strong protection for groups of conductors. Because of the facility with which it is applied it is particularly useful for temporary or experimental wiring as well as permanent installations. Leads can be brought out at any point to make a "tailor-made" harness, strong, secure, tight-fitting.

Harnessrap retains its elasticity and can be removed as easily as it is applied, then reused again and again.

Because of its flexibility it is especially useful for harnesses that carry wiring around sharp corners or that are subject to repeated flexing or bending.

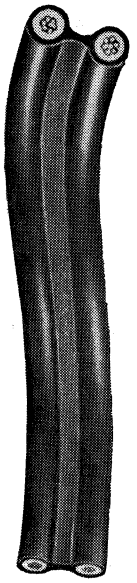
DURAFOAM UHF/VHF TELEVISION TRANSMISSION LINE*

Over 25,000,000 Feet Already in Use



Durafoam quality is so high that we can offer an unconditional 15 year guarantee. Its high reliability construction features two tubes of cellular polyethylene, to assure low signal loss, and a heavy black polyethylene Permaline insulation, to offer the maximum protection against deterioration caused by moisture, chemicals, salts and sunlight.

Durafoam is also extremely easy to install, cutting down the amount of time required fo reach job.

PERMALINE TV TRANSMISSION LINES

It is now over 12 years since Columbia introduced Permaline television transmission line, the only television wire available today with a written guarantee against deterioration. In all this time we have yet to replace one single foot of this wire for reasons of deterioration, proving beyond all doubt that Permaline insulation has no equal for long life under the most severe atmospheric conditions.

Permaline is a high molecular weight polyethylene containing a very small percentage of carbon black to provide maximum resistance to the ultra violet rays in sunlight which has been proven the chief factor in the deterioration of ordinary television wire.

Electrical characteristics of Permaline are very similar to brown polyethylene television lines, but as there is no deterioration attenuation remains constant instead of increasing as is the case with brown polyethylene which becomes brittle and cracks. Remember it is not how THICK but how GOOD!

PERMAFOAM LOW LOSS COAXIAL CABLES

PERMAFOAM is a new type of coaxial cable for television systems, communication work, and all other co-ax applications. A foam polyethylene dielectric replaces the conventional solid polyethylene thus providing far lower capacity and attenuation. In fact, attenuation is approximately 25% lower than standard coaxial cables of same type. Overall jacket is our PERMALINE high molecular weight polyethylene. This non-contaminating jacket is unaffected by salt air, chemical fumes, damp rot, fungus, acids, alkalis, etc., and is remarkably resistant to all extreme weather conditions. Moisture resistance is so high that this insulation is now used on submarine cables. Will withstand severe temperature extremes and is immune to the deteriorating effects of sunlight and other ultra violet. Note: In addition to the PERMAFOAM cables listed below, any other RG U cable is available with a foam polyethylene dielectric on special order.

FLEXFOAM ULTRA LOW CAPACITANCE MICROPHONE CABLES — EXCLUSIVE WITH COLUMBIA

Another Columbia first is a complete line of microphone cables with capacity as much as 35% lower than the best regular microphone cables available today. This drastic lowering of capacity has been made possible by the use of foamed polyethylene as the inner dielectric instead of solid polyethylene as normally used. This low capacitance means that lengths of microphone cable can be increased as much as 50%. These cables are also ideal for Hi-Fi and high quality sound work because of the extremely low attenuation, particularly at the higher audio-frequencies. The use of a special flexible vinyl as an outer jacket provides flexibility practically as good as rubber yet has much greater abrasion resistance. Color—Grey.

Also available in high gloss gleaming white jackets.

Also available with bright red jackets for easy identification.

COLUMBIA *SUPER-FLEX*

ULTRA FLEXIBLE FOAM COAXIAL CABLES

We believe Super-Flex Coaxial Cables are the finest available today — not only because of their appearance and flexibility, but because they actually out-perform any similar type of coaxial cable in use today. Cables feature High Gloss Non Contaminating Jackets and have a primary insulation of foam Polyethylene to reduce attenuation as much as 25% over regular types of coaxial cables. In addition to the above features Super-Flex Coaxial Cables will not become rigid in severe cold. Can be used with standard connectors. Ideal for citizens band and amateur use. Perfect for master television systems due to the wide range of colors available. Standard stock colors are: Black-White-Silver or Beige. Other colors to special order with a minimum of 5000 ft. of a color.

H'VY GAUGE JUKE BOX-H.F. SPKR CABLE

FOR LONG RUNS—LESS LOSS

This cable is similar to the 24 ga. juke box speaker cable listed in our general catalog, except that the 21 ga. conductors in this cable reduce the line loss to exactly half. Ridge in insulation over one conductor plus one tinned and one bare conductor provide double indication of polarity.

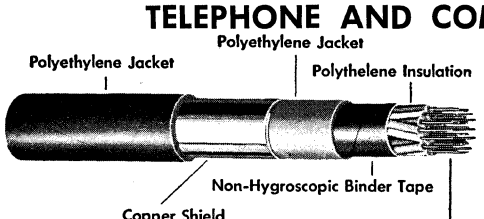
TELEPHONE AND COMMUNICATION CABLE DIRECT BURIAL TYPE FULLY COLOR CODED



GENERAL APPLICATION AND ADVANTAGE

APPLICATION: Communication and Telephone Cable for use in **direct burial installations** provides a high quality product similar to that used for aerial and duct systems, but with the addition of protective armoring. This minimizes the possibility of damage to the cable from rodents and insects and, correctly installed, reduces the dangers to the cable from sharp stones and other hazards of underground burial installations.

ADVANTAGE: The lightweight, but rugged construction of direct burial Communication and Telephone Cable permits fast and economical underground installation of communication systems with the assurance of dependable and enduring service. This is made possible through utilization of the same high quality polyethylene compounds that are used in its counterpart for aerial and duct type installations, with the added protection of copper armoring tapes and a durable, high-molecular weight, polyethylene jacket.

SPECIFICATIONS

Solid bare annealed copper 22 Awg. gauge conductors; thin wall, color coded, polyethylene insulation; conductors twisted to form pairs with symmetrically varying lays to minimize cross-talk; cabled (for 6 thru 50 pairs) by stranding pairs in concentric layers, or (for 75 thru 400 pairs) by stranding pairs into concentrically formed units, which are in turn cabled to form the complete assembly; non-hygroscopic binder tape furnishing high dielectric strength between shield and individual conductors; continuous copper shielding tape; high-molecular weight, polyethlene jacket.

MAGNET WIRE

Popular, profitable specialty wire packaged for easy selling in radio-electrical, department, specialty and hardware stores. Wide variety of sizes and insulations. Keeps stock in perfect order, always saleable. Supplied on Spool as shown and in Heavier Weights for whatever weight desired. Here is a handy and convenient way to stock small quantities of wire. It prevents wire from matting or tangling.

DAFLEX PLASTIC TUBING

105°C POLVINYLCHLORIDE (PVC) MEETS MIL-I-631D SPECS

Specifically compounded vinyl resins for superior all around performance. UL approved for 105°C, conforms to Spec MIL-I-631D Type F, Form U, Grades A and C. Class 1 and 2, Category 1. Resistant to heat, oil, water, chemical corrosion, fungi and aging. Very hi abrasion resistance. Will retain its flexibility. Suitable for covering and protecting wires and cables. Designed for electrical, electronic and aircraft applications. Non-flammable. Meets ASTM—D876, ASTM—D922.

DAFLEX VINYL COATED FIBERGLASS TUBING 130°C

MEETS MIL-I-3190B SPECS (ASTM, NEMA GRADE B-B-1)

DAFLEX 130 is recommended for continuous temperatures up to 130°C. Constructed to provide a tough, flexible, heat resistant tubing. Made from an inorganic fiberglass base sleeving with heat resistant plastic coating, extremely flexible tough plastic insulation. Will not support combustion. Meets MIL-I-3190B, NEMA VSI ASTM D372. MIL-I-21557

DAFLON TEFLON* SPAGHETTI TUBING

Daflon 500 and 550 tubing is extruded from Dupont tetrafluoroethylene resin and is unmatched by any other tubing for use in applications for hi frequencies and hi temperatures. Rated for continuous operation of 250°C it retains its toughness and flexibility thruout. Has high resistance to fatigue and stresses. Will not shrink back during soldering operation. Non-flammable, flexible, it permits miniaturization of design and compactness. Lowest coefficient of friction. Inert to all fungus growth. Conforms to **MIL-I-22129C Spec.** AMS 3651B, 3653B, 3654, 3655.

SHRINKABLE IRRADIATED POLYOLEFIN TUBING

This series is designed for maximum mechanical strength at stress or points of connection. It is strong and abrasion resistant and is supplied in expanded sizes. It insulates, jackets, splices, encapsulates, weatherproofs components, connectors, cables and irregular shaped objects. When exposed to heat (235°F) the tubing shrinks 50% in diameter, 5% longitudinal contraction. Controlled shrinkage to exact requirement takes place. Meets or exceeds MIL-I-23053 (WEP) Class 1 specs.

CAT. NOS. INDICATE EXPANDED SIZE Shrinkage Ratio: 2:1 (50%)

Shrinkage Ratio: 2:1 (50%)

Flexible, shrinks 50% on heat application, less than 10% longitudinal contraction. Suitable for insulating components and cables in varying shapes and diameters. Has a higher resistance to oils than low density polyethylene. Conforms to MIL-I-631D, Type F, Form V, Grade A and C, Class 1 and 2, Cat. 1. Controlled shrinkage on application of heat to predetermined size takes place in seven seconds at above 266°F.

HEAT SHRINKABLE TEFLON* TUBING

DAFLON SH-400 (FEP)

Made with Modified TEFLON* FEP will shrink over inserted objects upon exposure to moderate heat. Heretofore, many joints, parts, components, devices could not be protected because of hi temperature required for shrinkage; Can now use this FEP TEFLON* which has a continuous service temperature of 400°F. Will shrink at 300°F. Supplied in natural color. Complete shrinkage at 350°F. Now, many heat sensitive products can use the permanent protection of TEFLON.* Will not burn or support flame, long lengths available. Extruded.

TUBULAR BRAID PER MIL SPEC QQ-B-575

Tinned copper shielded braid mf'd completely round per Mil Spec QQ-B-575. Maintains its round configuration. Shielding coverage is 95% or more. Used in military applications where maximum shielding is required against electrostatic interference. Useful against mechanical abrasion and stresses for cables — as grounding cable.

SUBMINIATURE TEFLON* HOOK-UP WIRE
PER MIL-W-16878D — TYPE ET — 250 VOLTS, 200°C

Thin miniature hook-up wire is suitable in miniature slip ring assemblies, as interconnecting wire between wafers in microminiature electronic circuitry, instrument wire, medical wire, subminiature thermo-couple lead wire, strain gauge wire, etc. Provides lighter weight, greater flexibility and hi temperature resistance. Size Nos. 32 thru 20 conform to MIL-W-16878D type ET 250 volts, 200°C. Silver plated copper conductor.

SHIELDED PLASTIC MICROPHONE CABLE

Will withstand abuse and is resistant to oil, moisture, aging. Have low capacitance, Hi insulation resistance and low attenuation. Will not strain or mark.
2772 — For hi impedance microphone
2773 — For crystal, ribbon, etc. Mikes all are suitable for hi-fi interconnecting cables.
2774 — For hi impedance lapel mikes.
OPERATING TEMPERATURE: −20°C to +60°C.

SHIELDED ULTRA LOW CAPACITY MICROPHONE CABLE

Plastic Jacket — Cellular Foam Polyethylene Insulation
BRAIDED SHIELD

DESCRIPTION: Constructed with white foam polyethylene insulation, braided tinned copper shield, chrome gray vinyl jacket. The low loss foam polyethylene construction has lower capacitance and attenuation than standard polyethylene mike cables as much as 50%. This increases the effective length of cable as much as 50% without signal loss.

OPERATING TEMPERATURE: −20°C to +60°C.

HI-VOLTAGE CABLE

One conductor, stranded copper tinned, rulan — flame retardant — polyethylene insulation, braided tinned copper overall when shielded. Used as hi-voltage leads in electronic equipment to minimize RF radiation in equipment.

DESCRIPTION: One conductor stranded copper tinned rulan (flame retarding type) polyethylene insulation. Available white/red tracer. Temp. Rating: 105°C.

Shielded: Same as above with tinned copper braided shield overall.

Special construction available to order.

NEW HI-VOLT CORONA RESISTANT TEFLON* CABLE

Voltage Rating at Sea Level • Voltage Rating at 80,000 feet, approximately 1/3 lower • Minimum life expectancy: 10,000 hours.

SMALL SIZE:
You do not need bulky, thick, insulation jacketing as used wtih silicone rubber and polyethylene insulations to get your hi-voltage requirements. Wire used is MIL-SPEC QQ-W-343 and MIL-W-16878D. insulation used conforms and surpasses MIL-SPEC-W-16878D

AVOID CORONA PROBLEMS:
Corona resistant Teflon construction is specifically designed to retard and prevent corona penetration.
Temperature variations from −60° to +300°C have no life effect on the corona resistant Teflon. In addition, there is no stress or crack failure under severe, adverse conditions including mechanical strain, moisture, corona or chemical conditions.

PUT-UP: 250′, 500′, 1000′

DESCRIPTION:
Single Conductor, Stranded Silver Plated Copper, Corona Resistant Teflon* Insulation.

TEMPERATURE RATING:
−90°C to +250°C.

VOLTAGE RATING:
Based on insulation thickness.

AVAILABLE COLORS:
White, Black, Red, Green, Yellow, Lt. Blue, Brown, Orange, Gray, Violet. (Also available in tracer colors)

Adjustable P-Clips Nine (9) Sizes Fit Any Loop Diameter From 1/8" Through 2".

- Molded of finest natural, virgin nylon.
- Lightweight, chemical and abrasion resistant, high tensile strength, excellent dielectric properties, rust and rot resistant.
- Typical applications include: cables; bundles of wires, components, pipes and tubing wherever a clamp, strain relief or strap is required.

ADVANTAGES OF ADJUSTABLE FEATURE:
- Reduces Inventory.
- Permits Quantity Purchases with Better Discounts.
- Controls Tension.

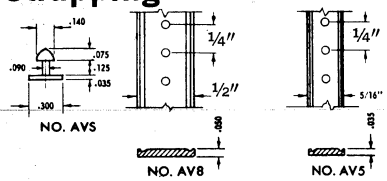
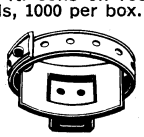
Strapping

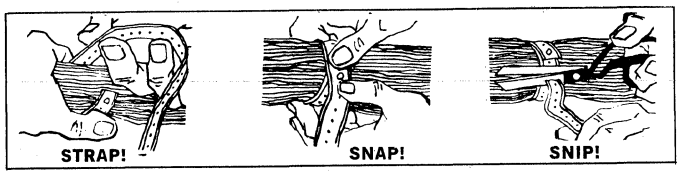


Material: PVC (Polyvinylchloride); extremely strong; temperature range −26°F to +180°F.

Packing: strap, 75 ft. coil boxed; or 500 or 1000 ft. coils on reels. Studs, 1000 per box.

For panel mounting a Strap Saddle is available for use in combination with the AV 5 strapping. Lay wire bundle into Strap Saddle fastened to panel. Thread Strapping through wings of saddle and fasten. Material is molded nylon. Temperature range: −76°F to 250°F.





Installation: Stud is inserted in end of strap extending from dispenser carton; strap is then passed under and around wire bringing it back, under tension, over stud again. Strap is then cut at next hole. This operation should be repeated approximately every 6 inches or as required.

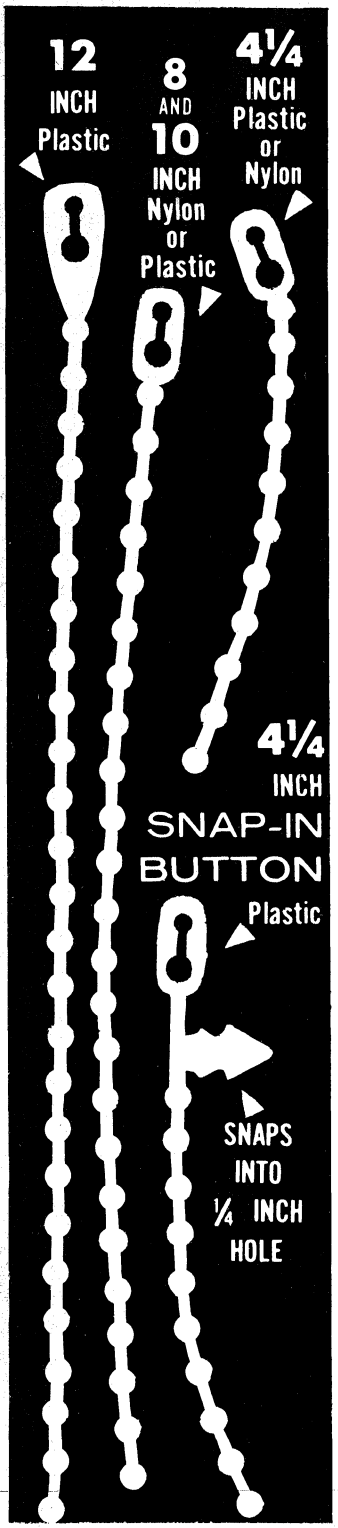
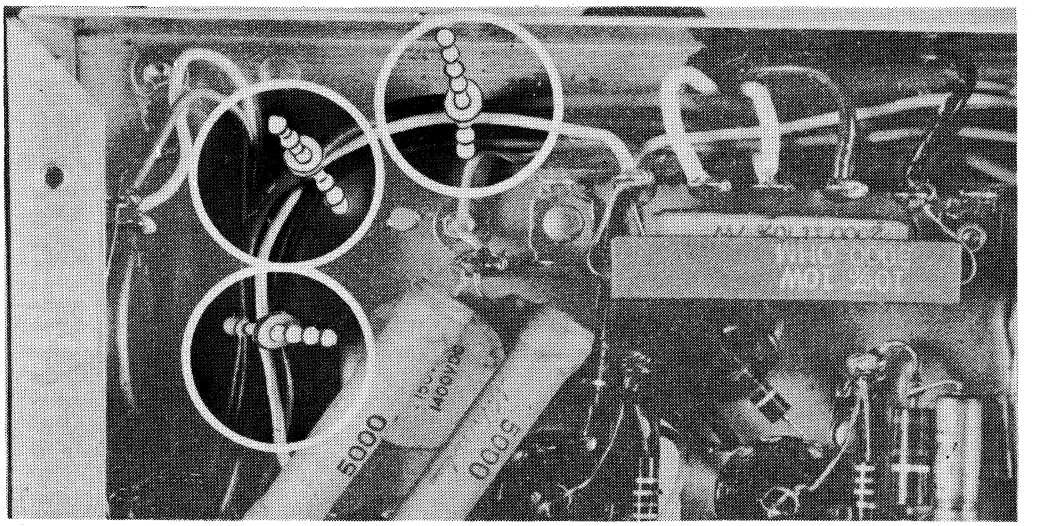
GC ELECTRONICS

WIRE and CABLE TIES





Cable ties, an efficient, cost cutting and time proven asset to any operation, large or small, as a single replacement or on an assembly line. Easily utilized by skilled or unskilled manpower and eliminating many of the problems of difficult lacing. GC cable ties are widely used today by manufacturers of electronic equipment, by the US Government, computor manufacturers, even on automobile production lines. Consider cable ties for your operation. Learn how they cut operation costs and keep customers happy.

PLASTIC

Tough and flexible. Chemically inert. Available in Red, Yellow, or Blue in four different lengths. Smart looking...a compliment to any assembly. Special SNAP BUTTON model holds wire and cable bundles to walls, chassis, cabinets, fire walls etc.

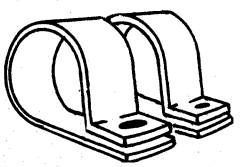
ELECTROCRAFT PLASTIC CABLE CLAMPS

Electrocraft Cable Clamps are used for fastening cables, harnesses, tubing, etc. Lightweight, durable, with excellent electrical and mechanical properties. Two materials: (1) Ethyl Cellulose, for normal industrial and commercial uses--where temperatures range from--40 degree F. to 185 degree F. (2) Nylon (Zytel), for extreme durability and high resistance to temperature (--60 degree F. to 300 degree F.) and most chemicals.



ETHYL CELLULOSE CABLE CLAMPS

Transparent(light yellowish)plastic. Meets specifications AN742. Plastic thickness is .063".

INSULATING TEFLON* TUBING

Exceptionally tough and flexible. Withstands temperatures from 450 degree below zero F. to 500 degree above zero F. Will not melt solder joints. Outstanding dielectric properties – zero moisture absorption. Chemically inert. Completely weatherproof. Wires can be inserted much more easily than in any other tubing.

GC NO. 75 STANDARD THIN NYLON CORD .028" DIAMETER

Nylon cord with a fibreglass core. All especially treated to prevent stretching and slipping. GC cords No. 75, 75-A and 74 will handle 90% of replacements. 25 ft., 50 ft., 100 ft. spools are supplied in permanent, clear plastic containers.

Used on 95% of the latest sets manufactured. Made of finest braided Nylon over a Fiberglas Core. It is prestretched and chemically treated.

Cat. No. 75-25	25 ft. spool	Net .75
Cat. No. 75-50	50 ft. spool	Net 1.43
Cat. No. 75-100	100 ft. spool	Net 2.37
Cat. No. 75-1000	1000 ft. spool	Net 15.57

GC NO. 75-A EXTRA THIN NYLON CORD .025" DIAMETER

Used on Motorola, RCA, Sentinel, Stromberg Carlson, and others. Extra thin, made of finest braided Nylon, chemically treated.

Cat. No. 75A-25	25 ft. spool	Net .75
Cat. No. 75A-50	50 ft. spool	Net 1.43
Cat. No. 75A-100	100 ft. spool	Net 2.37

GC COLOR TV NO-STRETCH DIAL CORD

EXTRA FINE .025" diameter supplied on metal spools.

Cat. No. 87-25	25 ft. spool	Net .90
Cat. No. 87-100	100 ft. spool	Net 2.70

STANDARD .028" diameter - supplied on metal spools.

Cat. No. 88-25	25 ft. spool	Net .90
Cat. No. 88-100	100 ft. spool	Net 2.70

MEDIUM .040" diameter - supplied on metal spools.

Cat. No. 89-25	25 ft. spool	Net .90
Cat. No. 89-100	100 ft. spool	Net 2.70

GC DIAL CABLE TOOL

A handy tool to aid in replacing worn out cables or cables slipped off of drums, to replace dial cord springs also.
Cat. No. 5096 Net .60

GC DIAL CORD NON-SLIP DRESSING STICK

Simply rub the stick on cord and job is done. Prevents and stops slipping.
Cat. No. 1212 Net .25

GC WIRE MARKERS

Handy wire markers needed for tracing circuits, marking circuits, marking wires in replacing parts, etc.. Nos. 1 to 33 - 3 full strips included to kit.
Cat. No. 9229 Net 1.00

GC MOTOROLA TV DIAL BELT

Replacement belt as used on Motorola TV Tuners. Original replacement part.
Cat. No. 196 Net 30

GC RCA TUNER BELT

Belt used on RCA Tuners such as 8T, 8TC, 8TK, 9TC, etc.
Cat. No. 195 Net .30

Exact replacement for 1956 model RCA TV sets.
Cat. No. 197 Net 1.10

GC INSULATING CAMBRIC

Dry yellow varnished cambric for field coils, transformers, chokes, resistors, motors, etc. Roll 210 sq.in.
Cat. No. 549 .010" Net .78

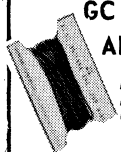
GC FYBEROID FISH PAPER

Fish paper has many uses around the shops for repair jobs where electrical insulation is required. Roll 240 sq.in.
Cat. No. 560 .010" Net .50

GC LAMINATED PHENOLIC PLASTIC PANELS

Black laminated panels. 1/16" thick stock. Color: black.

Cat. No. 590	6" x 6"	Net .42
Cat. No. 591	6" x 12"	Net .82
Cat. No. 592	12" x 12"	Net 1.58



GC AC-DC INDOOR ANTENNA WIRE

Antenna lead wire for indoor type AC-DC sets. Flexible copper wire covered with brown plastic insulation.
Cat. No. 840 25 ft. coil Net .37

GC 300-OHM LINE PROTECTIVE TUBING

Clear plastic tubing will fit over 300-ohm flat lines and will protect the line from grounding and rubbing on corners of buildings, eaves, etc. It actually protects and waterproofs the line.

Cat. No. 625	Box of 8 ft.	Net .75
Cat. No. 626	250 ft. coil	Net 18.29
Cat. No. 627	1000 ft.	Net 68.26

GC GENFLEX PLASTIC TUBING

High grade extremely flexible plastic tubing for radio and electronic insulation work. Highly resistant to cold or heat. High dielectric strength, average 8000 volts. Colors: Black, Red, Green and Clear (Specify color).

Cat. No. 603	18 B-S Gauge, .042 I.D., 20' pkg.	Net .82

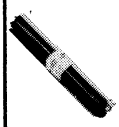
GC SERVICEMEN'S KIT

Handy kits of assorted colors and sizes. Ideal for experimenters and servicemen. Kit of 25 ft. assorted. Sizes 18 to 10 Genflex Tubing.
Cat. No. 635 Net .82



GC ASSORTED SPAGHETTI KIT

An assortment of 7½" lengths of spaghetti sleeving. 26 lengths to the kit. Sizes include from No. 17 wire to 3/8" I.D.
Cat. No. 550 Net .40

SPAGHETTI AND SLEEVING ASSORTMENT

A variety of sizes and colors are included of high grade varnish tubing. Put up in attractive box.
Cat. No. 551 Net .90

GC PLASTIC TUBING KITS

Best grade varnished tubing put in convenient 20 ft. lengths. Will fit wire from No. 12 to No. 18. Colors: Black, Red, Yellow, Green and Blue.
Cat. No. 499 Net 1.67

GC RADIO SPAGHETTI

High grade spaghetti for radio-television work. Average dielectric strength 4000 volts. Very flexible. Smoothly coated with best grades of varnish. Material is approved by A.S.T.M. Colors: Black, Brown, Red, Green and Yellow (Specify color). 30" lengths.

HEATRAX®

HEAT SHRINKABLE TUBING

During the manufacturing process, HEATRAX tubing is expanded beyond its original extruded diameter. It will shrink back, or recover to, this original state when heat is applied briefly. Special formulations and irradiation improve its ability to return to original dimensions, assure more uniform recovery, and develop superior stress and crack resistance. When irradiated, HEATRAX materials will not melt at elevated temperatures.

HEATRAX offers these advantages in application:

1. Elastic memory—tubing shrinks quickly on application of heat to form a tight cover, even over irregularly shaped objects
2. Thermal stability
3. Outstanding electrical characteristics
4. Excellent mechanical properties
5. Excellent chemical and solvent resistance

The table of Typical Properties below supplies comparative characteristics for the various HEATRAX materials. The following brief description will also be helpful in selecting the proper type for specific applications:

Catalog #HIX—IRRADIATED POLYOLEFIN
Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 135°C/275°F to —55°C/—65°F

This flexible, general purpose material will not cold flow, never melts and will not split on applications within temperature range. It is less expensive than Teflon HEATRAX. Compared with Vinyl HEATRAX, it is superior in mechanical and dielectric strength, and has less longitudinal shrinkage, higher corrosion resistance and a wider temperature range.

HIX is supplied in two classes:
I-Flame Retarded II-Clear (not flame retarded)
Available with U/L approval.

Catalog #HRX—IRRADIATED SEMI-RIGID POLYOLEFIN
Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 135°C/275°F to —55°C/—65°F

This material is designed for strain relief applications and protection of delicate components. It will not cold flow, never melts, and will not split on applications within temperature range. It has better gripping power and tensile strength than HIX Irradiated Polyolefin, HCX Irradiated Vinyl and HVX Vinyl.

HRX is supplied in two classes:
I-Flame Retarded II-Clear (not flame retarded)

Catalog #HCX—IRRADIATED FLEXIBLE VINYL
Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 105°C/220°F to —20°C/—5°F

This general purpose material is more flexible and less expensive than HIX Irradiated Polyolefin. Compared with HVX Flexible Vinyl, it is superior in flexibility and crack resistance and has slightly better mechanical strength.

Catalog #HVX—FLEXIBLE VINYL
Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 95°C/200°F to —10°C/15°F
This material has the lowest shrink temperature and the lowest cost of all HEATRAX tubing. HVX is offered in 4 colors.

TEFLON HEATRAX:
Flexible Teflon is primarily for use in high thermal and difficult chemical environmental applications, or where a low coefficient of friction is desirable. It provides excellent electrical insulation, has excellent chemical and solvent resistance. It has the widest temperature range, best dielectric and corrosion resistant properties of all HEATRAX tubings. Temperature range of all Teflon HEATRAX is from 260°C/500°F to —65°C/—85°F.
The following types of Teflon HEATRAX are available:
Cat. #HTX-Thin Wall Teflon (AWG sizes)-Shrink ratio 1½ to 1 (expanded to recovered diameter)
Cat. #HSX-Stand. Wall Teflon (AWG sizes)-Shrink ratio 1½ to 1 (expanded to recovered diameter)
Cat. #HFX-4x Teflon (fractional sizes)-Shrink ratio is 4 to 1 (expanded to recovered diameter)

SHRINKING METHODS HEAT GUN & ACCESSORIES

Excellent results may be obtained by dipping HEATRAX in hot liquids, by oven heat, infrared heat, or open flame. However, the HEATRAX Heat Gun offers the easiest method of applying heat to all types of shrinkable tubing.

HEATRAX Heat Gun:

The HEATRAX Heat Gun is a flameless hot air torch — lightweight and mobile — or adaptable for permanent mounting. Three models, with different temperature ranges, are available. All models have adjustable air volume control and a three-way switch (hot-cool-off). All Heat Guns operate on 115V, 50/60 cycles and deliver an air volume of 35 CFM with a velocity of 3000 FPM.

Cat. #	Current (Amp.)	Temperature Range °C	Temperature Range °F	Price Each
HG-103	12	150/260	300/500	$40.25
HG-105	14	260/400	500/750	45.35
HG-107	18	400/525	750/1000	56.25

In addition, adaptors for the Heatgun (shown below) have been developed to concentrate heat in specific application areas.

SPIRAL WRAP®

This expandable spiral-cut plastic wrap harnesses, insulates and protects wire assemblies up to 8" diameter.

HARNESSING:

Spiral Wrap applies a strong grip developed both from its torsional cut and the memory of plastic materials used. It retains its strength under repeated flexing and bending, follows wire paths easily, and makes neat, free-running cables. It is extremely useful on long continuous runs where many leads are required; wires can enter or break out at any point. Spiral Wrap can be removed easily for trouble shooting and then re-applied.

PROTECTION:

Spiral Wrap is available in materials which accommodate a heat range from —265°C/—450°F to 260°C/500°F for insulation purposes. It is also available in materials with high abrasion resistance and in materials for use outdoors where resistance to ultra-violet rays is required.

MATERIAL DESCRIPTION

Polyethylene	Versatile, low cost material
Polyethylene, black	In addition to above, this material is designed for outdoor use. It resists ultra-violet rays. Oper. Temp. —75°C/—105°F to 100°C/215°F.
Rulan (carbon impregnated polyethylene)	Used primarily in applications where a low cost self-extinguishing material is required. Oper. Temp. —25°C/—10°F to 95°C/200°F.
Nylon, natural	This material offers best mechanical protection; also has a higher temperature rating than polyethylene. Oper. Temp. —100°C/—150°F to 150°C/300°C.
Nylon, black	In addition to the above, this material is designed for outdoor use; it resists ultra-violet rays. Oper Temp. —100°C/—150°F to 110°C/230°F.
Teflon	Primarily used in high temperature applications; also has an extremely low operating temperature, excellent dielectric properties and is not affected by organic solvents or acids. Oper. Temp. —265°C/—450°F to 260°C/500°F.

TUBING

VINYL, FIBERGLASS & TEFLON

ICORE offers a complete line of Vinyl, Fiberglass, and Teflon tubing for electrical insulation applications.

	Cat. #	Class	
Vinyl	SLV-105	A	Low cost, high temperature vinyl for applications up to 105°C/220°F.
	SLV-40	—	Low temperature vinyl for applications down to −65°C/−85°F.
Fiberglass	SLV-130	B	Grade B Abrasion resistant fiberglass tubing for applications up to 130°C/225°F.
	SLV-1200	C	Tightly braided 100% fiberglass tubing for applications up to 650°C/1200°F.
Teflon		C	Excellent electrical insulating properties, good flexibility, chemical inertness for applications up to 260°C/500°F.
	STT		Teflon thin wall
	STS		Teflon standard wall
	STL		Teflon lightweight (extra thin wall)
	TTF		Teflon tubing in fractional sizes (heavy wall).

FIBERGLASS TUBING

CAT. #SLV-1200 HIGH TEMPERATURE, CLASS C

This sleeving of tightly braided 100% fiberglass is for use in temperatures up to 650°C/1200°F. Closely woven construction provides maximum abrasion resistance with high flexibility. Material is treated to remove all organic matter and to render the glass braid fray resistant. Material available in double wall on request.

TEFLON TFE TUBING

ICORE Teflon tubing offers the exceptional combination of properties inherent in Teflon: heat resistance, excellent electrical insulating characteristics, flexibility, and good abrasion resistance.
Special extrusion techniques produce pinhole-free tubing of uniform concentricity which assures maximum mechanical and electrical protection.
ICORE Teflon tubing has high resistance to flexual fatigue and stress, will not absorb moisture and has lowest coefficient of friction of all materials. Ideal for applications where heat resistance, flexibility, excellent dielectric values, and chemically inert properties are required.

Teflon is rated for continuous operation at 260°C/500°F. A hot soldering iron will not shrink back Teflon as frequently happens with conventional thermoplastic materials. In addition, Teflon has an excellent low temperature rating (—65°C/—85°F).

LACING TAPE and CORD

Catalog #LTN—Flat Braided Nylon Tape
LTD—Flat Braided Dacron Tape
LTT—Flat Braided Teflon Tape
LCN—Round Twisted Nylon Cord
LCL—Round Twisted Linen Cord
LCV—Round Vinyl Cord

General Description

Flat Braided Tape—Designed to create a wider contact area with insulation so tape does not slip away from contact point. It is more flexible than cord and easier on the user's hand. Flat tapes do not appreciably increase the diameter of the cable. Recommended for all types of harness work.

Round Twisted Cord—Suited particularly for wires having a secondary insulation or those utilizing a textile as an insulation material. It may also be used for plastic and rubber insulated wire.

Materials

Nylon—synthetic fiber resistant to fungus and most acids, with excellent tensile strength and abrasion resistance.

Dacron—has all of nylon characteristics, as well as better acid resistance, less elongation and less susceptability to discoloration.

Linen—Available in cord only, has less stretch than nylon and dacron and is excellent for serving heavy cable and ropes. Also used for lacing wire bundles where a stiffer tie is required, as in switchboards. motors. etc.

Teflon—a specially developed fiberglass flatbraid of Teflon coated yarns designed for high temperature applications up to 260°C/500°F. Teflon is bonded to fiberglass to keep tape from fraying.

Vinyl—inexpensive material used in bundling and harnessing wires.

Finishes—the function of the finish is to permit easier handling of the material (reduce fray), and improve knot retention.

ICORE Standard MW Finish—A micro-crystalline wax with melting point above 55°C/130°F and non-flaking characteristics. It is compounded to develop excellent knot retention, yet not give a waxy feel to user.

Special PVA Finish—Polyvinyl acetate resin with a melting point above 175°C/350°F for use where a wax-free type or higher operating temperature is specified.

Special HPVA Finish—(Similar to GE) Polyvinyl acetate with a heavier finish which permits easier handling and better knot retention.

Special SR Finish—A special coating of fungistatic synthetic rubber containing no corrosive compounding ingredients. It has best knot characteristics of all materials, along with good non-dusting or flaking properties. Being soft and pliable, it will not injure user's hands.

1/2	1 3/8
5/8	1 1/2
3/4	1 5/8
7/8	1 3/4
1	1 7/8
1 1/8	2

Sizes 2 1/4" to 4" available on special order

ZIPPER TUBING

Zipper Tubing is an ideal jacketing material to enclose, insulate, waterproof, shield, mark and identify wire and cable assemblies. The wrap-around, quick zip characteristics allow wire harnesses to be covered at any point, even after connections have been made. The closure device is a zipper running along the zipper track which permits easy re-entry for inspection or modification. Zipper track may be permanently closed and waterproofed with the application of Zipper Tubing Sealer over the track.

The ease of application of Zipper Tubing allows significant labor savings.

GROMSTRIPS®

CONTINUOUS STRIP GROMMETS

Gromstrip is a continuous length of extruded U-channel for use as a protective covering on sharp edges. It can be cut to desired length and easily inserted into any hole, regardless of shape or configuration. (On angles less than 90°, miter the two outside edges for better fit).

Gromstrip requires minimum space, grips surfaces snugly, and won't jar loose. Wherever wires pass through a metal piece, Gromstrip used on the sharp edges will eliminate cutting and fraying of the wires.

The use of continuous strips sharply reduces inventory of stock grommets. The addition of sizes #6 and #7 now allows the use of Gromstrip up to ½" thickness.

New tough polyethylene see-thru dispenser pak allows users to pull out enough material for requirements: a quick glance tells when to re-order.

Polyethylene — used for general application

Nylon — used where a particularly tough and abrasive resistant material is desired; it has a higher operating temperature, and better dielectric constant than polyethylene.

Teflon — used for high temperature applications. Available on quotation only.

Multiple Conductor Cables!

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cables. Conductors are of tinned copper strand with primary insulation for use up to 105°C per MIL-W-16878D Type C. Insulated for 1000 volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per MIL-STD. 122.

All conductors are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black Thermoplastic or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene extra cost.)

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on cable construction.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Useable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MULTI-CONDUCTOR STOCK CABLES

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.

NATIONAL OPENLINE

DESIGNED FOR COMMERCIAL TV DISTRIBUTION SYSTEMS AND RF POWER TRANSMISSION

Specifications: two inch spacing between conductors . . . 12 gauge copperweld . . . 470 ohm impedance . . . attenuation: 150 mc 0.25 DB PER 100 FEET, AT 30 mc 0.1 DB PER 100 FEET. Velocity factor 0.975 . . . copperweld steel for maximum strength and electrical stability, and to insure permanent uniform performance . . . Spreaders are brown polystyrene, spaced at average five foot intervals, staggered slightly to avoid spurious resonances.

Also 1″ & ½″ copper line for TV leadin Formvar coated.

COMPLETE WIRE AND CABLE INVENTORY ALWAYS AVAILABLE FOR IMMEDIATE SHIPMENT!

National Wire and Cable Corporation maintains one of the largest and most complete stocks of electronic and aircraft wire and cable in the nation. **Total footage of floor stocks exceeds 50 million feet!**

Your immediate source for "MIL and Jan-Spec" wires, coaxial cables and vinyl sleeving.

Special color coded. shielded and jacketed combinations of hook-up wire and multi-conductor cables can be made to your specifications and delivered promptly without delay.

SHORT WAVE LISTENING ANTENNA

COMPLETELY ASSEMBLED . . . READY FOR INSTALLATION AND USE

#4301

Can be mounted almost anywhere . . . pole-to-pole, pole-to-tree, garage-to-house, under the eaves, in the attic, etc. Scientifically tuned for 1.8 to 30 mc coverage. Antenna package includes 50 feet of copper wire, attached at both ends to low-loss insulators. Attached to each insulator is 15 feet of waterproof non-stretch rope for mounting the antenna. At one end of the antenna is 50 feet of insulated copper lead-in wire. Comes with detailed instructions.

COLORWIRE TRANSMISSION LINES

Provides Maximum Transfer of Signal Energy from Antenna to Set

GOOD FOR VHF: EXCELLENT FOR UHF: SUPERB FOR COLOR TV

A full range of quality, low-loss transmission lines and accessories that answer all-channel and color reception problems. See details of each type below:

1. SUPER TWIN FOAM #1037

Porous, low loss, air-filled foam dielectric separates two pre-stretched heavy duty copper conductors. Overall ultraviolet resisting, carbon black filled outer polyethylene jacket makes for abrasion resistant, highly flexible, highly efficient (20 year guarantee) transmission line in wet or dry weather. Adequate for all normal color requirements; needs no transformers. Excellent VHF; good UHF; excellent color.

Attenuation per 100 feet at 200mc — 1.1 db; at 500 mc — 3.1 db; at 900 mc — 3.99 db.

Put Up: "500 or 1000 foot spools." Convenient 50, 75, or 100 foot hanks.

2. SHIELDED TWIN FOAM #1038

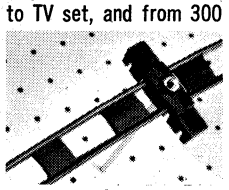
Same general characteristics as #1037 except for overall 99 per cent braid shield plus additional abrasion-free overall jacket. Ideally suited for noise-free UHF, FM and multiplex; excellent for smear-free color TV reception.

3. FOIL SHIELDED TWIN TRANSMISSION LINE WITH GROUND RUNNER #1041

Very similar to #1038 except that shielding material is aluminum foil — mylar backed as opposed to regular tinned copper braid. Highly efficient (100%coverage), more economical. Good for UHF, VHF or color.

4. S-906 COLORIFIC 450 OHM INSULATED OPEN WIRE TRANSMISSION LINE KIT

The best of all transmission lines. Reliable, efficient, lowest loss, perfect for any type of service — UHF, VHF or color. Lowest attenuation, lowest leakage path. Includes 450/300 ohm and 300/400 ohm matching transformers. Easy to install. Has 18 gauge solid non-stretch copperweld conductors and carbon black filled polyethylene insulation. One transformer used at antenna; the other installed at window leading to TV set, and from 300 ohm side of this transformer regular 300 ohm twin lead is brought directly to set.

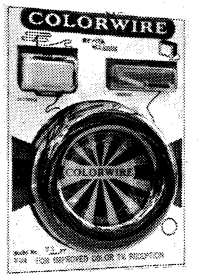


Tried and true under the most adverse conditions. This line most nearly approaches perfection in transmission lines. Attractively packaged to command attention.

USES #1562 LADDER WIRE; FOR DETAILS SEE LISTING FOR #1562 ON PAGE 4.

5. COLORIFIC FACTORY SWEPT COAXIAL CABLE SYSTEMS

Uses #1594 RG/59-U Foam



Designed particularly for noise problem areas. Basic impedance 72 ohms. Low loss dielectric construction to cut down attenuation and signal leakage. Unaffected by stray fields and proximity to metals. Good for VHF and color, adequate for UHF. Complete with factory installed terminations and weather boot, with or without indoor and outdoor 72/300 ohm matching transformers. Attractively packaged.

#1598 — specially designed, new 72 ohm all-channel coax for full 82-channel use. Slightly higher cost, much more efficient.

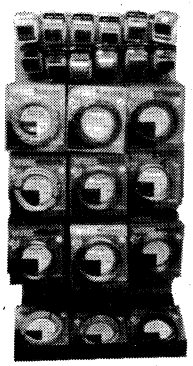
SPECIAL SELF-SERVICE DISPLAYS



ATTRACTIVELY COLORED • CUSTOMER CONVENIENCE EASY TO INSTALL • MODULAR DESIGN

Two feet wide, four feet high — easy to see over. Joining units four inches wide makes it possible to modularize display panels, and also to break up different categories of products for maximum eye appeal, greatest impulse value, largest turnover.

Saxton's displays are designed for breakdown into category types. And you can add additional display units as needed. "Look up" shelf provides easy customer viewing of bottom level displays.

Complete information on request. Ask your Saxton representative for full lists of products in the following display categories: **CB and Ham; Telephone items; General Wire Types for the Engineer and Experimenter; Audio and Hi-Fi; Modules; TV Antenna Wires and Antenna Accessories; Special Purpose Types —Toys, Hobbies, Etc.; General Purpose Types for Display in Hardware, Lumberyard, Chain and Discount Outlets.**

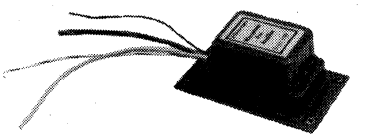
TRANSISTORIZED MODULES

Each module is an assembled package of electronic components—transistors, resistors, capacitors, etc. All can be powered by standard 6 volt battery pack. Each module comes with an instruction book including schematic drawings and parts list.



Saxton Model	No.	Use	Description
HFA	570	Fire alarm	When hooked up to 2 or 3 speakers, makes any room or area safe against unexpected fires.
HS	571	Siren	Creates tone varying from 50 to 3000 cycles during 30-second period, using 8 ohm speaker.
HCO	572	Code OSC & Key	Produces sharp, crisp signal for transmitting code, using any PM speaker.
HPA-1	573	Public address	Amplifies and produces quality audio signal with power output of about 1 watt, using 8 ohm speaker. carbon button microphone.
HDF	574	Dual Flasher	Permits 2 signal devices to flash alternately or give warning 70-80 times per minute, using pilot light bulbs.
HP	575	Phono amplifier	Amplifies signals produced by phono pickup arm so that loud speaker reproduction is possible.
HI	576	Intercom	An economical way to carry on conversations efficiently between 2 points, using 2 8-ohm speakers and talk-listen switches.
HB	577	Baby nurse	Monitors an infants' desire for recognition, using 2 8-ohm speakers.
HPA-2	578	High gain public address	Provides clear audio, using 8-ohm speaker or trumpet.
HG	579	Guitar amp	Amplifies music from guitar or accordion, using contact microphone and 8 or 16 ohm speaker.
HTA	580	Telephone amp	Amplifies telephone conversations, useful for conference calls.
HM	581	Metronome	Produces sounds for maintaining proper musical beat; generates 20-200 audio pulses per minute.

Saxton Model	No.	Use	Description
HFH	582	Fog Horn	Creates loud attention-getting signal which can be heard and identified over long distances on land or sea, using 8 or 45 ohm speakers.
HWM	583	Wireless Mike	Transmits signals from point-to-point with no physical connection between transmitter and receiver, using an AM radio.
HWP	584	Wireless Phono oscillator	Allows phono pickup and arm to be played through any radio with no physical connections, using any radio receiver.
HWB	585	Wireless baby nurse	Amplifies infants' restless movements or requests for attention with no physical links between module and a radio receiver.
HMP	586	Mike preamp	Serves as booster for low level signal producing devices such as microphones, magnetic phonograph cartridges, etc.
HBA	587	Burglar Alarm	Warns against intruders with switches installed at various entrances, using 3, 8 or 16 ohm speakers.
HT	588	Electronic timer	Permits holding back or controlling time from one second to three minutes for dozens of situations — such as turning off T.V. sets during commercials.
HST	589	Stroboscope	Permits viewing of rapidly moving objects such as motors as if they were standing still for measurement, calibration, etc.
HPS	590	Power Supply	Delivers 6-12 volts continuously at 1 amp, hum-free, plug-in, reliable source for powering all modules.

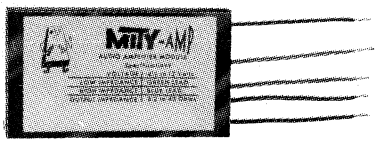
"MITY-AMP" 2-WATT AUDIO AMPLIFIER



MA-100

COMPLETELY EPOXY ENCAPSULATED MODULE • Shockproof & Moisture-proof • Dirt & Dustproof

FEATURES
- SPACE-SAVING—2" x 3½" x ⅞"
- HI-FI AMPLIFIER—20 cy. to 15KC ±db at 1-watt level
- LIGHTWEIGHT—Weighs total of 6 ounces
- RUGGED—Unconditionally guaranteed. Shock, moisture and dust-proof
- EASY TO INSTALL & USE—Hooked up in minutes. Simple instructions make unit functional immediately.
- ECONOMICAL—Low in price, big in performance, Long, trouble-free life. Total power requirements 6 or 12 volts.
- PORTABLE—Operates on auto or boat battery
- VERSATILE—Uses limited only by your ingenuity. Ideal for p. a. system, phono amplifier, stereo, intercom, signal tracer, modulation, tape monitor, etc.

SPECIFICATIONS
1. INPUT VOLTAGE REQUIRED TO DRIVE FULL POWER—.5 Volts
2. POWER REQUIREMENTS—6 to 12 volts at 300 to 700 ma. Current determined by speaker voice coil impedance.
3. FREQUENCY RESPONSE—20 cy. to 15 KC ±2 db at 1 watt level.
4. INPUT IMPEDANCE—45 ohms to 50K ohms.
5. OUTPUT IMPEDANCE—3.2 to 45 ohms.
6. WEIGHT—Six ounces.
7. OVERALL SIZE—2" x 3½" x 7/8".
8. HIGHLY SHOCKPROOF—Unaffected by dust, dirt or moisture. Operable under water.
9. GUARANTEED AGAINST DEFECTS.

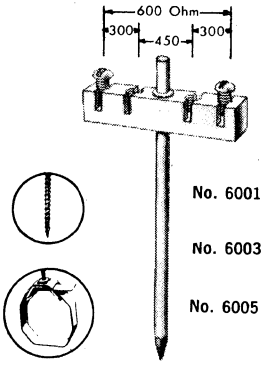
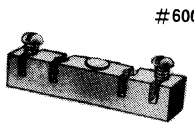
OPEN LINE ACCESSORIES
STAND-OFFS & STRESS INSULATORS





BLOCKS ONLY WITHOUT DRIVE-IN HARDWARE
Complete with 2 plated screws for use as spacer blocks in making your own open line installations.
Saxton No. 6000

Especially designed for use with open line transmission wire installations. Tighten screws after pulling wire taut. For use as spacer, partially tighten set-screws. This permits movement of wire in the slots and avoids potential wire breaks. Use outside slots for 600-ohm wire. The "Tappee" Stand-off Insulator is good for community installations where random spacing of open line is desirable to avoid tuned circuits. Ideal also for use as anchor point or spacer for "fence wire" installations. "Tappee" permits inexpensive, time and labor-saving, trouble-free installations, and is made for use with No. 12 thru No. 18-gauge wire. Hardware constructed of double-dip galvanized steel; block is high impact polystyrene.

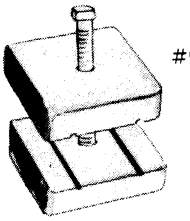
HEAVY DUTY OPEN LINE STRESS INSULATORS
Plastic blocks, slotted on either one or two-inch centers, for taking up slack or as anchor points in open line installations. Complete with plated lag bolt.12 or 14 gauge.
Saxton No. 6010



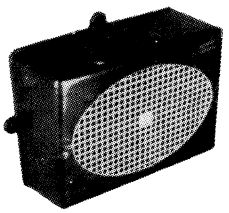
12 AWG INSULATOR
Same as Saxton No. 6010. Has 2-inch spacing for #12 AWG wires. Insulators for other gauges available on special order only.
Saxton No. 6011

FIBRE GLASS GUY LINE

Non-radiating, non-absorbing, high-strength "wireless" guy wire in vinyl jacket. 500-lb test strength. 100-ft. coil.
Saxton No. 7000

SUPER-STRONG FIBRE GLASS GUY WIRE
Same as above but in grey vinyl jacket. 1000-lb. tensile strength. 100-ft. coil.
Saxton No. 7002

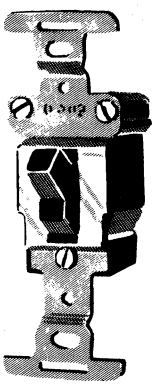
PATIO SPEAKER BAFFLE



Saxton No. 1205

Made of unbreakable, high impact styrene. Mahogany color. Complete with hardware and mounting instructions. Use for paging, monitoring, patio and stereo extensions, or as extension speaker anywhere. Complete with mounting escutcheon for 5 x 7, 6 x 9, 4, 5 or 6" round speakers.

DELAYED ACTION • COMMERCIAL SAFETY SWITCH



Switch "off" and the lamp goes out SIXTY SECONDS LATER! Allows sufficient time to reach destination SAFELY. Replaces present wall switch in seconds. Ideal for Home, Farm or Cottage. Fully guaranteed and UL Approved.
